Oral lipid-based  
formulations are  
attracting considerable  
attention due to their  
capacity to facilitate  
gastrointestinal  
absorption and reduce  
or eliminate the effect  
of food on the  
absorption of poorly  
water-soluble, lipophilic  
drugs. Despite the  
obvious and  
demonstrated utility of  
these formulations for  
addressing a persistent  
and growing problem

Employing a uniform, easy-to-use format, *Vitamin Analysis for the Health and Food Sciences, Second Edition* provides the most current information on the methods of vitamin analysis applicable to foods, supplements, and pharmaceuticals. Highlighting the rapid advancement of vitamin assay methodology, this edition emphasizes the use of improved and sophisticated instrumentation including the recent applications and impact of the widely adopted LC-MS. Designed as a bench reference, this volume gives you the tools to make efficient and correct decisions

regarding the appropriate analytical approach--saving time and effort in the lab. Each chapter is devoted to a particular vitamin and begins with a brief review of its uniqueness and its role in metabolism. The authors stress a thorough understanding of the chemistry of each compound in order to effectively analyze it and to this end provide the chemical structure and nomenclature of each vitamin, along with tabular information on spectral properties. They supply extensive insight into practical problem-solving including an awareness of the stability of vitamins and their extraction from different biological matrices. All information is heavily

documented with the latest scientific papers and organized into easily read tables covering topics necessary for accurate analytical results. After presenting the chemistry and biochemistry of the vitamin, each chapter details the commonly used analytical and regulatory methods. A summary table gives at-a-glance information on many of these sources, as well as several of the AOAC International Methods. In addition the authors apply their extensive experience in the field to create a critical, interpretive review of the advanced methods of vitamin analysis with sufficient detail to be a valuable guide to cutting-edge methodology.

William Andrew Inc. As the third volume of a trilogy on Plants in cosmetics, this study concerns potentially harmful components which occur naturally in some plants the ingredients of which could likely be used in cosmetic products. Its aim is to raise awareness on the

implication on consumer health by use of such ingredients and to trigger preventive measures. The 24 data sheets of components, selected by the authors because they are not regulated specifically in cosmetic legislation, give useful information particularly for the competent authorities and the manufacturers of raw materials and cosmetic products, mainly based on currently available pharmaco-toxicological data. Each monograph includes a bibliography and conclusions / recommendations.
