These are the proceedings of the 22nd International Conference on Domain Decomposition Methods, which was held in Lugano, Switzerland. With 172 participants from over 24 countries, this conference continued a long-standing tradition of internationally oriented meetings on Domain Decomposition Methods. The book features a well-balanced mix of established and new topics, such as the manifold theory of Schwarz Methods, Isogeometric Analysis, Discontinuous Galerkin Methods, exploitation of modern HPC architectures and industrial applications. As the conference program reflects, the growing capabilities in terms of theory and available hardware allow increasingly complex non-linear and multi-physics simulations, confirming the tremendous potential and flexibility of the domain decomposition concept.

The first comprehensive history of the oldest major opera house in the Americas. The Teatro Solís in Montevideo, Uruguay—established in 1856 and still operating—is the oldest theater in the Americas. Solís audiences thrilled to the lyricism of many of the great singers of the 19th Century, among them Adelina Patti, Romilda Pantaleoni, Gemma Bellincioni, and Enrico Caruso, accompanied by a 285-member company. Programs also featured orchestra and dance: the theater played host to dancer Vaslav Nijinsky's last stage performance and presented Puccini, Mascagni, Saint-Saëns and Richard Strauss. Susana Salgado's lively historical account—the very first of its kind—is enriched by anecdotes, reviews and illustrations. A complete narrative chronology of performances is indexed by performer and work, making this book a rare treat for opera buffs and an invaluable resource for scholars in the fields of music and dance history, American studies, and Latin American studies.

Severe tricuspid regurgitation (TR) is a common valvular heart disease with an incidence of approximately 4% in the adult general population. Most commonly, it results from secondary causes including left ventricular dysfunction, mitral regurgitation and pulmonary arterial hypertension. Isolated severe TR has been identified as an independent predictor of death and cardiac adverse events. Furthermore, TR has been observed to develop late after left-sided valve surgery in up to 10% of patients with adverse impact on clinical outcomes. Perioperative mortality after surgical correction of TR has been reported to range between 2 and 10%. Moreover, a relevant proportion of patients with TR have already undergone open-heart surgical procedures and reoperation has been associated with an excessive risk of mortality. As a result, less invasive treatment options using transcatheter techniques may address an unmet need among high risk and inoperable patients. Different concepts for the percutaneous treatment of symptomatic severe TR have been developed including annular reduction, restoration of coaptation, and edge-to-edge repair. Worldwide, an increasing number of patients is treated using these emerging techniques and early clinical results begin to be available.

This is a story of excitement, laughs, astonishment and anger - a story of the determination of a man with a dream and a passion for motor racing in the big leagues. It is the first time that the history of the always under-financed Gordini racing team has been documented in English, and the first complete story of Gordini himself in any language. This volume will appeal to new enthusiasts and old hands of Formula 1 and sports prototype racing, especially those who have owned a Gordini-badged high-performance Renault road car. It charts Gordini's early life and beginnings in motorsport, up to 1969 when Renault took over the Gordini company, keeping his name on all the racing engines until 1986, before finally resurrecting it for a performance version of the Renault Twingo and Clio in 2009. The book is packed with evocative period images from important collections, supplementary transcripts in English from many contemporary interviews, plus recollections from former employees remembering their time working with Gordini, and an exhaustive set of statistics. All the way it's a roller coaster of joy, despair, humour, and stunning images. The racing legend of 'Le Sorcier' lives on.

In the last decade there has been a growing interest in the study of the interactions between the heart and the brain, especially in the field of cerebral ischemia. The interactions between cardiovascular and cerebrovascular diseases are of relevance not only for research investigation, but also for clinical implications in the daily clinical practice. i.e. A wealth of information has been gathered particularly on three topics, cardiovascular consequences of cerebral injuries, cardioembolic stroke, and association of carotid and coronary artery disease. The available information, however, is still sparse and fragmentary mainly because of the lack of communication between neurologists and cardiologists. With the aim of improving communication between several disciplines and technologies, we started to organize since 1987 in Bologna, Italy, an international Symposium on heart brain interactions to be held every 3 years. Our intention was to gather prominent clinicians and researchers from outstanding cardiologic and neuro logic institutions actively involved in the study of heart-brain interactions. The ambitious goal has been to fit different pieces of information like in a puzzle. This book originates from the contributions presented at the 2nd Symposium which was held in Bologna on November 30-December 1, 1990. The book is subdivided into three sections: I cardiovascular consequences of cerebral damage, II cardiogenic cerebral ischemia, III cerebrovascular and coronary artery disease.

Written over a period of 17 years, the Handbook of Chemical Risk Assessment exhaustively examines and analyzes the world literature on chemicals entering the environment from human activities. The three volumes cover chemicals recommended by environmental specialists of the U.S. Fish and Wildlife Service and other resource managers. The choices were based on the real or potential impact of each contaminant and on the knowledge available about their mitigation. The information for each chemical includes source and use; physical, chemical, and metabolic properties; concentrations in field collections of abiotic materials and living organisms; deficiency effects; lethal and sublethal effects; and proposed regulatory criteria for the protection of human health and sensitive natural resources. Each chapter selectively reviews and synthesizes the technical literature on a specific priority contaminant and its effects on the

environment. Successful risk assessment relies heavily on extensive and well-documented databases. They often include too much - or too little - information about too many chemicals. Of the hundreds of thousands of chemicals discharged into the environment, only a small number have sufficient information to attempt preliminary risk assessment. Sold only as a three volume set, the Handbook of Chemical Risk Assessment provides you with the exact amount of information you need in a single resource.

Bullying has long been tolerated as a rite of passage among children and adolescents. There is an implication that individuals who are bullied must have "asked for" this type of treatment, or deserved it. Sometimes, even the child who is bullied begins to internalize this idea. For many years, there has been a general acceptance and collective shrug when it comes to a child or adolescent with greater social capital or power pushing around a child perceived as subordinate. But bullying is not developmentally appropriate; it should not be considered a normal part of the typical social grouping that occurs throughout a child's life. Although bullying behavior endures through generations, the milieu is changing. Historically, bullying has occurred at school, the physical setting in which most of childhood is centered and the primary source for peer group formation. In recent years, however, the physical setting is not the only place bullying is occurring. Technology allows for an entirely new type of digital electronic aggression, cyberbullying, which takes place through chat rooms, instant messaging, social media, and other forms of digital electronic communication. Composition of peer groups, shifting demographics, changing societal norms, and modern technology are contextual factors that must be considered to understand and effectively react to bullying in the United States. Youth are embedded in multiple contexts and each of these contexts interacts with individual characteristics of youth in ways that either exacerbate or attenuate the association between these individual characteristics and bullying perpetration or victimization. Recognizing that bullying behavior is a major public health problem that demands the concerted and coordinated time and attention of parents, educators and school administrators, health care providers, policy makers, families, and others concerned with the care of children, this report evaluates the state of the science on biological and

psychosocial consequences of peer victimization and the risk and protective factors that either increase or decrease peer victimization behavior and consequences.

“From bullying on the playground to sexual harassment in the workplace, perfectly nice people often do perfectly awful things. But why? In this thoughtful and beautifully written book, Sanderson shows how basic principles of social psychology explain such behavior—and how they can be used to change it. A smart and practical guide to becoming a better and braver version of ourselves.” —Daniel Gilbert, author of *Stumbling on Happiness* “Why do so many people stand silent when someone does something bad? If you find yourself increasingly asking that

question these days, you’re not alone—and Catherine Sanderson has written the book for you.” —George Conway, founder of the Lincoln Project Why do good people so often do nothing when a seemingly small action could make a big difference? A pioneering social psychologist explains why moral courage is so rare—and reveals how it can be triggered or trained. We are bombarded every day by reports of bad behavior, from sexual harassment to political corruption and bullying belligerence. It’s tempting to blame evil acts on evil people, but that leaves the rest of us off the hook. Silence, after all, can perpetuate cruelty. *Why We Act* draws on the latest developments in psychology and neuroscience to tackle an urgent question: Why do so many of us fail to intervene when we’re needed—and what would it take to make us step up? A renowned psychologist who has done pioneering research on social norms, Catherine Sanderson was inspired to write this book when a freshman in her son’s dorm died twenty hours after a bad fall while drinking. There were many points along the way when a decision to seek help could have saved his life. Why did no one act sooner? Cutting-edge neuroscience offers part of the answer, showing how deviating from the group activates the same receptors in the brain that are triggered by pain. But Sanderson also points to many ways in which our faulty assumptions about

what other people are thinking can paralyze us. And she shares surprisingly effective and simple strategies for resisting the pressure to conform. Moral courage, it turns out, is not innate. Small details and the right training can make a big difference. Inspiring and potentially life transforming, *Why We Act* reveals that while the urge to do nothing is deeply ingrained, even the most hesitant would-be bystander can learn to be a moral rebel. *Dictionary of Minor Planet Names* Emerald Group Publishing Tahiti & French Polynesia, in the Lonely Planet Travel Survival series, is full of helpful advice on what to see, where to go, local customs, where to stay and other useful hints for the traveller. *Law Express: Intellectual Property Law 4th edn* Imray, Laurie, Norie and Wilson Ltd This third edition (2013) of the RCC's guide to the beautiful cruising coasts of Corsica, the Bouches de Bonifacio and Sardinia's island-studded north coast has been thoroughly updated and revised by John Marchment during 2013.
