### NFPA 20 Standard for the Installation of Stationary Pumps for Fire Protection

Cengage Learning

This product of the Facility Guidelines Institute (FGI) provides minimum standards for design and construction of hospitals and outpatient facilities. The standards for long- term care facilities will appear in a new document for 2014; please see the entry for Guidelines for Design and Construction of Residential

Health, Care, and Support Facilities. Included in the Guidelines for Hospitals and Outpatient Facilities is information on the planning, design, construction, and commissioning process and facility requirements for both hospitals and outpatient facilities. Included are general hospitals, psychiatric hospitals, and rehabilitation facilities as well as new chapters on children's and critical access hospitals. Outpatient facilities covered include primary care facilities; outpatient surgery facilities; birth centers; urgent care centers; mobile units; outpatient psychiatric and rehabilitation centers;

facilities for endoscopy, dialysis, and cancer treatment; and a new chapter on dental facilities. In addition, the 2014 Guidelines includes new material on safety risk assessments and medication safety zones; increased requirements for commissioning infrastructure systems; and updated requirements for surgery, imaging, endoscopy, and dialysis facilities as well as primary care facilities and freestanding emergency facilities.

Nfpa 101: Life Safety Code Handbook, 2012 Edition CRC Press

Featuring a groundbreaking shift to a risk-vs. occupancy-based approach, the 2012 NFPA 99 ushers in a new era in health care safety! In response to an increasingly decentralized health care system, a growing array of high-tech procedures, and new security demands, the 2012 NFPA 99 has reinvented itself to reflect a new environment where it is the risk that a procedure poses to patients and staff, not the location where it is conducted, that defines safety guidelines. Its new title -- Health Care Facilities Code -- signifies that it is rewritten to make performance criteria for health care facilities more enforceable and adoptable. Completely

reorganized, this new benchmark advances health care facility safety with major changes such as... \* A new risk-based framework \* A fully updated Chapter 5, Gas and Vacuum Systems, including additional maintenance requirements \* New chapters on security, fire protection, and information technology \* Operating rooms are considered a wet location unless a risk assessment of the area determines otherwise. Move up to a new level of protection and keep facilities up-to-code and patients and staff safe from harm. The 2012 NFPA 99 is essential for engineers, facility managers...AHJs...plumbers...gas and vacuum system installers, designers, and verifiers...security personnel...insurance companies...and manufacturers.

In a health care environment, risks abound. This must-have book provides organizations with the tools and know-how to conduct effective assessments of potential risks and take steps to minimize them. Whether the risk issue is infant and pediatric abduction, infection control

during construction, fire safety, or potential disaster emergencies, Environment of Carer Risk Assessment guides organizations through a basic risk assessment process and suggests potential high-profile, high-risk areas for consideration. It shows how to use existing standards tools such as the Periodic Performance Review, Interim Life Safety Measures, the hazard vulnerability analysis, and more. And, it provides case studies, examples, and worksheets for assessing and minimizing risk and includes a CD-ROM with interactive risk assessment forms. Performing risk assessments can help organizations avoid OSHA fines, accreditation noncompliance, and more. But the bottom line is that by performing prudent and timely risk assessments, organizations can help ensure patient, staff, and visitor safety.
