are: 1) conservation,
up-gradation and
utilization of natural
endowments such as
land, water, plant,
animal and human
resources in a
harmonious and
integrated manner with
low-cost, simple,

effective and replicable. 1. Watershed Management Concept and Principles Let's review the four core principles: Watersheds are natural systems that we can work with. Watershed management is continuous and needs a multi-disciplinary approach. A watershed management framework supports partnering, using sound science, taking well-planned actions and achieving results. A flexible approach is always needed. Principles of Watershed Management | Watershed Academy Web ... Principles of watershed Management. 1) Watershed as natural system that we can work with. A system can be defined as

complex whole formed from related parts or a combination of related parts organized into a complex whole. Similarly, watershed can be regarded as a complete system and it entails several components. Introduction: Watershed, Principles of Watershed Management linkages is one of the key principles of watershed management. Other key principles are: addressing the root causes and drivers of environmental degradation (instead of treating symptoms); planning in an iterative process involving cycles of analysis, plan formulation, implementation and evaluation that allows for continuous learning and adjustments; Watershed Management Water

management covers all human interventions in relation to water bodies and water resources. The main objectives of water management are - exploitation and use of water resources, - protection, conservation and restoration of the ecological, landscape and social functions of the water bodies, - protection of people and property against the Watershed Management - Guiding Principles (or goal) of watershed management is to maintain the social, economic and ecological watershed functions in a balanced manner, and thereby to contribute to the sustainable development and the reduction of negative external impacts in a

re- gion. This presupposes that appropriate policies, legislation and institutions are in place. Module 1: Basics of Watershed Management General Chapter 1 ...Under watershed management task the water management is one of the very important components. A good water potential in watershed provides a conducive path for its overall development. In watershed the main source of water is the rainfall; however, the incoming ground water from surrounding areas also shares to some extent.
