(2nd ed.)In: Lehmann, J. and Joseph, S., Eds., Biochar for Environmental Management: Science and Technology, Earthscan, London, 1-9. has been cited by the following article: TITLE: Short-Term Field Decomposition and Physico-Chemical Transformation of Jatropa Pod Biochar in Acidic Mineral Soil The potential for biochar to improve both environmental and economic viability remains but

should be explored fully in a integrative analysis of waste-stream management, local biochar production... **Biochar for Environmental Management | Science and ...** Biomass-derived black carbon, charcoal or "biochar," as it is nowadays called, can be used as a soil amendment to improve nutrient retention and availability and therefore increase crop yields. Such a use of biochar

is a significant advance over conventional organic matter management, as the biochar is more stable in soil and is better able to retain nutrients.

Biochar for Environmental Management : An Introduction

Biochar is a carbon-rich, porous material (Atkinson et al., 2010), which is proposed to have various agronomic and environmental benefits once added to the soil (Kookana

et al., 2011). It is produced by the thermal decomposition of organic biomass, through pyrolysis, which involves heating biomass under conditions of partial or complete absence of oxygen (Sohi et al., 2010).
Biochar for Environmental Management: Science, Technology ...
Biochar is the carbon-rich product when biomass (such as wood, manure or crop residues) is heated in a closed container with

little or no available air. It can be used to improve agriculture and the environment in several ways, and its stability in soil and superior nutrient-retention properties make it an ideal soil amendment to increase crop yields.
Biochar for Environmental Management (2nd ed.)
Biochar is the carbon-rich product when biomass (such as wood, manure or crop residues) is heated in a closed

container with little or no available air. It can be used to improve agriculture and the environment in several ways, and its stability in soil and superior nutrient-retention properties make it an ideal soil amendment to increase crop yields.
