 Alternative Process Photography And Science
 The aniline process was used until about the 1880's when it was slowly replaced by the well known "blueprint" cyanotype process. Most contemporary alternative process photographers who use the platinotype process are aware that the George Eastman House (GEH) in Rochester has, among thousands of other important photographs, the first platinotype photograph ever made in the US. The photograph was made in New York in 1877 during the younger Willis' visit to the U.S. to demonstrate his ...

 Alternative Process Photography and Science meet at the Getty
 The wet plate process was invented in 1848 and is still a popular alternative photography technique today. First, a piece of glass is covered in collodion and other chemicals to prepare it for the camera. While it's still wet, it's placed in the camera for a photo. It's then put back in the darkroom to be developed and printed.
