Haryana State Pollution Control Board Environmental Pollution Monitoring And Control
 Environmental monitoring describes the processes and activities that need to take place to characterize and monitor the quality of the environment. Environmental monitoring is used in the preparation of environmental impact assessments, as well as in many circumstances in which human activities carry a risk of harmful effects on the natural environment. Environmental monitoring - Wikipedia
 Pollution is the introduction of contaminants into the natural environment that cause adverse change. Pollution can take the form of chemical substances or energy, such as noise, heat or light. Pollutants, the components of pollution, can be either foreign substances/energies or naturally occurring contaminants. Pollution is often classed as point source or nonpoint source pollution. Pollution - Wikipedia
 Chemical and pollution control is at the core of the New York State Department of Environmental Conservation's (DEC) mission, to protect New York's natural resources and our environment.
