 Microscope Image Processing
 Microscope image processing is a broad term that covers the use of digital image processing techniques to process, analyze and present images obtained from a microscope. Such processing is now commonplace in a number of diverse fields such as medicine, biological research, cancer research, drug testing, metallurgy, etc. A number of manufacturers of microscopes now specifically design in features that allow the microscopes to interface to an image processing system. Microscope image processing - Wikipedia
 Microscope Image Processing covers image digitization and display, object measurement and classification, autofocus, and structured illumination. Key Features: Detailed descriptions of many leading-edge methods and algorithms

 Image Analysis Software / Image Processing Software
 When people hear the term 'image-analysis software,' they immediately think of images collected under a microscope, but the software can be used for just about any type of graphical data readout, including gels, fluorescence assays and even scans of organs or whole animals.

 Image Magick This package can read many image formats, and perform several types of image processing functions. It has a very useful image display program called "display." It can read and write formats that have 16 bits/colour. There are at least two separate versions of this package being maintained at this point.

 Tute1: Basic Image Processing with ImageJ
 Microscope imaging software from Leica Microsystems combines microscope, digital camera and accessories into one fully integrated solution. With an intuitive user interface and straightforward navigation, it guides the user through any workflow, whether fast image acquisition or sophisticated expert analysis.

 PYME offers a data acquisition module which performs the microscope and camera control functionality similar to that offered by e.g. micro-manager, but optimised for PALM/STORM

type imaging. Some features include: Support for a range of common hardware including Andor IXon and Neo cameras
 python-microscopy
 ScopelImage 9.0 is image-processing software professionally designed for digital microscope. It allows you to view, capture, edit, record, zoom, measure, and process microscope images. It support multi-languages, as Chinese, English, German, French, Japanese, Polish and Arabic, and can switch freely between various languages.
 ScopelImage - Bioimager
 Microscope Image Processing covers image digitization and display, object measurement and classification, autofocus, and structured illumination. Key Features: . Detailed descriptions of many leading-edge methods and algorithms
 Microscope image processing (eBook, 2008) [WorldCat.org]
 Being proficient at using ImageJ is essential for most image processing and analysis. It can do simple things like crop, label, and alter the brightness and contrast of fluorescence images. It can also easily handle 3D stacks of confocal microscopy images, and perform complex quantitative analysis.

 Deconvolution in Optical Microscopy - Deconvolution is a computationally intensive image processing technique that is being increasingly utilized for improving the contrast and resolution of digital images captured in the microscope. The foundations are based upon a suite of methods that are designed to remove or reverse the blurring present in microscope images induced by the limited aperture of the objective.
