 IBM® Informix® is a low-administration, easy-to-use, and embeddable database that is ideal for application development. It supports a wide range of development platforms, such as Java™, .NET, PHP, and web services, enabling developers to build database applications in the language of their choice. Informix is designed to handle RDBMS data and XML without modification and can be extended easily to handle new data sets. This IBM Redbooks® publication provides fundamentals of Informix application development. It covers the Informix Client installation and configuration for application development environments. It discusses the skills and techniques for building Informix applications with Java, ESQL/C, OLE DB, .NET, PHP, Ruby on Rails, DataBlade®, and Hibernate. The book uses code examples to demonstrate how to develop an Informix application with various drivers, APIs, and interfaces. It also provides application development troubleshooting and considerations for performance. This book is intended for developers who use IBM Informix for application development. Although some of the topics that we discuss are highly technical, the information in the book might also be helpful for managers or

database administrators who are looking to better understand their Informix development environment.

Since 1908, the corporate giant now known as Champion International has operated a pulp and paper mill along the banks of the Pigeon River in Canton, North Carolina. As a result, during most of those years, this once-sparkling Appalachian stream has been virtually useless except as an industrial sewer -

foamy, foul-smelling, molasses-colored. By polluting the river, the mill that brought prosperity to Canton stunted the economic growth of the downstream communities in Cocke County, Tennessee. Although public pressure to clean up the Pigeon surfaced intermittently, it has been only in the years since 1985 that two organizations - the Pigeon River Action Group and the Dead Pigeon River Council - have mounted a sustained drive against the ongoing pollution. Today, following a multimillion-dollar upgrading of the Champion mill, the Pigeon River is cleaner but hardly pristine. Moreover, there is little evidence that Champion carried out its modernization for any reasons other than economic ones. Although he treats the viewpoints of Champion's defenders with respect, Bartlett argues forcefully for the river's cleanup and for continuing the considerable work that remains to be done.

Winner of the 2016 Paterson Prize for Books for Young People "It's easy to empathize with [Lily]....Throughout, first-time author Scofield creates striking images that will stay with readers." -- Publishers Weekly "This is a painful and poignant story that is not for every reader; but for those ready to deal with complex realistic fiction, it has much to offer." --Booklist "Dynamic...[Protagonist Lily Asher] comes to glorious, heartbreaking, embraceable, vibrant life courtesy of the experiences, heart and immense imagination and talent of Eugene author Chris Scofield." --The Register-Guard "Chris Scofield has written a young adult novel that doesn't compromise integrity for trendiness....It's complex and quirky...there can be no doubt as to its uniqueness." --LitReactor "The Shark Curtain is worth a read by teens and adults alike." --Eugene Weekly "Absolutely bewitching....Scofield has crafted a dense, poignant book, filled with extraordinarily beautiful language....In exploring themes such as art, sex, and self-acceptance, Scofield examines the trade-offs we all make to be included in the tribe." --KLCC "Those who prefer edgy period fiction with truly original characters will be fascinated by this glimpse into the mind of an unmedicated non-neurotypical teen struggling to come of age in the '60s." --The Bulletin of the Center for Children's Books "The Shark Curtain...is believable and real." --What Is Much "Brilliant, engaging, engulfing, fulfilling, beautiful. The Shark Curtain will turn you inside out and make you see the world

differently. As well you should. As well we all should. Because life isn't about having the answers, it's about grappling with the questions. Chris Scofield's fantastically fantastic novel pins the tail on the donkey with a pneumatic nail gun--I absolutely insist that you read this book!" --Garth Stein, New York Times best-selling author of *The Art of Racing in the Rain* Set against the changing terrain of middle-class values and the siren calls of art and puberty, *The Shark Curtain* invites us into Lily Asher's wonderful, terrible world. The older of two girls growing up in suburban Portland, Oregon, in the mid-1960s, her inner life stands in quirky contrast to the loving but dysfunctional world around her. Often misunderstood by her flawed but well-intentioned parents, teenage Lily orbits their tumultuous love affair, embracing what embraces her back: the ghost of her drowned dog, a lost aunt, numbers, shoe boxes, werewolves, rituals, and stories she pens herself (including one about a miscarried sibling she dubs "Frog Boy"). With "regular" visits from a wisecracking Jesus, an affectionate but combative friendship is born--a friendship that strains Lily's grasp of reality as much as her patience. From the violence of a Peeping Tom and catching Mom in flagrante delicto with the neighbor, to jungles in her closet, butlers under her bed, and barking in public, Lily struggles to balance her family's expectations with the visions that continue to isolate her.

Want to tap the power behind search rankings, product recommendations, social bookmarking, and online matchmaking? This fascinating book demonstrates how you can build Web 2.0 applications to mine the enormous amount of data created by people on the Internet. With the sophisticated algorithms in this book, you can write smart programs to access interesting datasets from other web sites, collect

data from users of your own applications, and analyze and understand the data once you've found it. *Programming Collective Intelligence* takes you into the world of machine learning and statistics, and explains how to draw conclusions about user experience, marketing, personal tastes, and human behavior in general -- all from information that you and others collect every day. Each algorithm is described clearly and concisely with code that can immediately be used on your web site, blog, Wiki, or specialized application. This book explains: Collaborative filtering techniques that enable online retailers to recommend products or media Methods of clustering to detect groups of similar items in a large dataset Search engine features -- crawlers, indexers, query engines, and the PageRank algorithm Optimization algorithms that search millions of possible solutions to a problem and choose the best one Bayesian filtering, used in spam filters for classifying documents based on word types and other features Using decision trees not only to make predictions, but to model the way decisions are made Predicting numerical values rather than classifications to build price models Support vector machines to match people in online dating sites Non-negative matrix factorization to find the independent features in a dataset Evolving intelligence for problem solving -- how a computer develops its skill by improving its own code the more it plays a game Each chapter includes exercises for extending the algorithms to make them more powerful. Go beyond simple database-backed applications and put the wealth of Internet data to work for you. "Bravo! I cannot think of a better way for a developer to first learn these

algorithms and methods, nor can I think of a better way for me (an old AI dog) to reinvigorate my knowledge of the details." -- Dan Russell, Google "Toby's book does a great job of breaking down the complex subject matter of machine-learning algorithms into practical, easy-to-understand examples that can be directly applied to analysis of social interaction across the Web today. If I had this book two years ago, it would have saved precious time going down some fruitless paths." -- Tim Wolters, CTO, Collective Intellect
