Modern Power System Analysis Mandy Concepcion
 Gifts are always with us: we use them positively to display affection and show gratitude for favours; we suspect that others give and accept them as douceurs and bribes. The gift also performed these roles in early modern English culture: and assumed a more significant role because networks of informal support and patronage were central to social and political behaviour. Favours, and their proper acknowledgement, were preoccupations of the age of Erasmus, Shakespeare, and Hobbes. As in modern society, giving and receiving was complex and full of the potential for social damage. 'Almost nothing', men of the Renaissance learned from that great classical guide to morality, Lucius Annaeus Seneca, 'is more disgraceful than the fact that we do not know how either to give or receive benefits'. The Power of Gifts is about those gifts and benefits - what they were, and how they were offered and received in the sixteenth and seventeenth centuries. It shows that the mode of giving, as well as what was given, was crucial to social bonding and political success. The volume moves from a general consideration of the nature of the gift to an exploration of the politics of giving. In the latter chapters some of the well-known rituals of English court life - the New Year ceremony, royal progresses, diplomatic missions - are viewed through the prism of gift-exchange. Gifts to monarchs or their ministers could focus attention on the donor, those from the crown could offer some assurance of favour. These fundamentals remained the same throughout the century and a half before the Civil War, but the attitude of individual monarchs altered specific behaviour. Elizabeth expected to be wooed with gifts and dispensed benefits largely for service rendered, James I modelled giving as the largesse of the Renaissance prince, Charles I's gift-exchanges focused on the art collecting of his coterie. And always in both politics and the law courts there was the danger that gifts would be corroded, morphing from acceptable behaviour into bribes and corruption. The Power of Gifts explores prescriptive literature, pamphlets, correspondence, legal cases and financial records, to illuminate social attitudes and behaviour through a rich series of examples and case-studies.

 This book examines present management accounting issues in the light of Japanese experiences. This is particularly important in the study of management accounting since Japanese management not only learnt from the West but also grew out of it. The book describes the importance and meaning of feed forward management accounting, compares Asian and Japanese management accounting with the Western approach and examines the philosophy behind them. It ends by looking into the future of management accounting science.

 'Automotive Computer Controlled Systems' explains the fundamental principles of engineering that lie behind the operation of vehicle electronic systems. Having obtained this knowledge, the reader will be able to make full use of the diagnostic equipment which is currently available. The book builds on the concepts contained in Vehicle Electronic Systems and Fault Diagnosis and gives clear steps to fault diagnosis and subsequent repair of the vehicle's electronic systems. The author discusses electronics only within the context of the vehicle systems under consideration, and thus keeps theory to a minimum. Allan Bonnick has written articles for several transport/vehicle journals and carries out consultancy work for the Institute of Road Transport Engineers. In addition, he has had many years teaching experience and is ideally placed to write this informative guide.
