In this case assume a helium gas turbine with single compressor and single turbine arrangement. Example of Brayton Cycle - Problem with Solution Using CyclePad, setting up such a cycle is actually very simple, but it requires that we know some of the basic facts and typical assumptions that apply to the cycle. We will examine a typical Rankine cycle problem and note the assumptions necessary to find the problem's solution, many of which will not be stated explicitly in the problem. Setting Up a Rankine Cycle Using CyclePad Example 1 - Superheat Rankine Cycle Qin 2 3 Wout boiler Turbine Consider the same Rankine power cycle as we analyzed before. But this time we are going to superheat the steam in the boiler before allowing it to enter the turbine at 6 MPa. Various items for this system per unit of mass flow rate through the boiler are to be determined.
