Behavioral Archaeology Routledge
Images of the Ice Age, here in its third edition, is the most complete study available of the world's earliest imagery, presenting a fascinating account of the art of our Ice Age ancestors.

Authoritative and wide-ranging, it covers not only the magnificent cave art of famous sites such as Lascaux, Altamira, and Chauvet, but also other less well-known sites around the world, and open-air and portable art. Lavishly illustrated and highly accessible, Images of the Ice Age provides a visual feast and an absorbing synthesis of this crucial aspect of human history, offering a unique opportunity to appreciate universally important works of art, many of which can never be accessible to the public, and which represent the very earliest evidence of artistic expression.

Archaeology OUP Oxford

At a time when archaeology has turned away from questions of the long-term and large scale, this collection of essays reflects on some of the big questions in archaeology and ancient history - how and why societies have grown in scale and complexity, how they have maintained and discarded aspects of their own cultural heritage, and how they have collapsed. In addressing these long-standing questions of broad interest and importance, the authors develop counter-narratives - new ways of understanding what used to be termed 'cultural evolution'. Encompassing the Middle East and Egypt, India, Southeast Asia, Australia, the American Southwest and Mesoamerica, the fourteen essays offer perspectives on long-term cultural

trajectories; on cities, states and empires; on collapse; and on the relationship between archaeology and history. The book concludes with a commentary by one of the major voices in archaeological theory, Norman Yoffee.

The Science of the Human Past Cambridge University Press

This controversial book is a survey of how relationships between indigenous peoples and the archaeological establishment have got into difficulty, and a crucial pointer to how to move forward from this point. With lucid appraisals of key debates such as NAGPRA, Kennewick and the repatriation of Tasmanian artefacts, Laurajane Smith dissects the nature and consequences of this clash of cultures. Smith explores how indigenous communities in the USA and Australia have confronted the pre-eminence of archaeological theory and discourse in the way the material remains of their past are cared for and controlled, and how this has challenged traditional archaeological thought and practice. Essential reading for all those concerned with developing a just and equal dialogue between the two parties, and the role of archaeology in the research and management of their heritage.

Social Theory in Archaeology and Ancient History Routledge

Theory in Archaeology tackles important questions about the diversity in archaeological theory and practice which face the discipline in the 1990s. What is the relationship between theory and practice? How does 'World' archaeological theory differ from 'European'? Can one be a good practitioner without theory? This unique book brings together contributors from many different countries and continents to provide the first truly global

perspective on archaeological theory. They examine the nature of material culture studies and look at problems of ethnicity, regionalism, and nationality. They consider, too, another fundamental of archaeological inquiry: can our research be objective, or must 'the past' always be a relativistic construction? Theory in Archaeology is an important book whose authors bring together very different perceptions of the past. Its wide scope and interest will attract an international readership among students and academics alike.

Archaeological Thinking Routledge

This updated edition of a textbook universally hailed as an indispensable guide, is a complete introduction to the methods and means of forensic archaeology. Incorporating new advances in the field, new case studies, and charting the growth and development of the subject, Forensic Archaeology examines the four main fields of recovery, search, skeletal analysis and analytical science, and how the concepts and methods of traditional archaeology can be utilized within criminal investigations. The authors provide in-depth chapters that discuss: search and location the various constraints and issues posed by an increasingly complex legal environment the archaeology of individual and mass graves how the subject has evolved to include international investigations of human rights links with forensic anthropology forensic geophysical survey. This is an invaluable resource that will provide students, researchers, academics and the general reader alike with a fascinating introduction to this complex and crucial subject.

Theories, Methods and Practice

Taylor & Francis

A lively and accessible introduction to

themes and debates in archaeological theory for students of all levels Archaeological Theory is a relatable, accessible, reader-friendly first step into the world of theory for archaeology students. Recognizing that many students shy away from the study of theory for fear that the material is too difficult or obscure, Archaeological Theory maintains that any student can develop an understanding of theory and that a knowledge of theory will lead to better practice. As one of the leading texts for introductory courses in archaeology and archaeological theory, it has provided many students with the essential foundation for a complete education in the discipline. With a focus on clarifying the history and development of archaeological theory, this valuable text serves as a roadmap to the different schools of theory in archaeology, clarifying the foundations of these schools of thought, the relationships between them, and the ideas that distinguish each from the other. Students will also learn about the relationship between archaeology and cultural and political developments, the origins of New and 'post-processual' archaeology, and current issues shaping the field. Written in a clear and informal style and incorporating examples, cartoons, and dialogues, this text provides an ideal introduction for students at all levels. The revised third edition has been updated with new and revised chapters and an expanded glossary and bibliography, as well as new readings to guide further study. Engages readers with informal and easy-to-understand prose, as well as examples, cartoons, and informal dialogues Prepares students to understand complex topics and current and perennial issues in the field such as

epistemology, agency, and materiality in the context of archaeological practice. Discusses current developments in associated disciplines. New and revised chapters on the material turn, politics and other issues, and an expanded glossary and bibliography with updated reading suggestions. Offers expanded coverage of materiality, cultural-historical archaeology, evolutionary theory, and the work of scholars of diverse backgrounds and specializations. Engaging and illuminating, *Archaeological Theory* is an indispensable resource for undergraduate and graduate students in archaeology and related disciplines.

Locating Meaning in Archaeology

Archaeology Theories, Methods and Practice Widely praised for its comprehensive coverage, excellent graphics and well-organized layout, this invaluable introduction for students and enthusiasts of archaeology has been expanded to incorporate all the latest developments.

Archaeology Theories, Methods and Practice New to this Edition

- * Updated treatment of postcolonial approaches and indigenous archaeology, with coverage of the ontological turn in archaeology, and new examples of community archaeology in southern Africa and Australia.
- * New discoveries and research across the globe, such as archaeological evidence of social hierarchies at the ancient city of Liangzhu, China, and recent evidence of Neanderthal art in France and Spain.
- * A more inclusive picture of archaeology, raising the profile of women in the discipline's history, and describing the development of archaeology in China and Japan.
- * In Chapter Five, updated treatment of social organization, with critical evaluations of Service's model, and new coverage of heterarchies.
- * New

box features include: forensic archaeology; change in the Amazon; ancient microbes; paleoproteomics; Must Farm; evidence of feasting at Stonehenge; Neanderthal art; and ceramic styles and learning.

- * New book design, including, for each chapter, distinct introductions that offer a general overview of each topic covered.

Archaeology Theories, Methods and Practice The textbook on what archaeologists do and how they do it - completely revised and redesigned. For the Fourth Edition, new theoretical approaches, such as agency, materiality, and engagement theory, are added and earlier approaches analyzed afresh. Field methods and scientific techniques have been updated throughout, and new emphasis is placed on climate change and its impact on human affairs. The latest information on topics as varied as the Iceman, Pleistocene extinctions, and llama domestication is included, along with the most up-to-date material on GIS and surveying technology. New topics will be introduced to emphasize the ever-changing face of modern archaeology, and additional special box features will be included, as well as discussion of the archaeological techniques needed to study the material culture of the twentieth and twenty-first centuries. A key component of the new edition will be the introduction of a dedicated Web site and study guide to accompany the textbook itself. Over 600 illustrations.

introduction to
archaeology. Archaeology Theories,
Methods, and Practice The History of
Archaeology An Introduction
This Encyclopedia brings together the
most recent scientific information on a
collection of subjects that are too often -
and inconveniently - treated in separate
publications. It provides a survey of
archaeological method and theory, as
well as the application of physical and
biological sciences in archaeological
research. Every aspect of archaeological
work is represented, from the discovery
process to the ultimate disposition of
materials. Thus the reader will find
entries on subject matter covering: *
disciplinary theory * legislation affecting
the work of archaeologists * pre-
excavation surveying * excavation
methodology * on-site conservation
techniques * post-excavation analysis
The rapid evolution of analytical
technology is often superficially treated
or not covered at all in textbooks or
other commonly available sources. Here,
the latest refinements in techniques
such as radiometric dating, stable
isotopic analysis, and the PCR technique
of DNA analysis are presented clearly
and authoritatively. The discussion of
these techniques is amplified by
including results of the work of
professionals conducting
interdisciplinary research and by
covering the methodological enhancements
provided by the physical and natural
sciences. Cultural property legislation,
regardless of its country of origin, has
affected how archaeologists conduct
their work. This encyclopedia covers all
major U.S. legislation developed for the
protection of cultural property, including
the recent Native American Graves
Protection and Repatriation Act, and
offers a substantial article on worldwide

legislation concerning the reburial of
human remains and its effects on the
present and future practice of
archaeology. Without some sort of
conservation program at the point of
excavation, valuable materials may be
inadvertently contaminated or
destroyed. Many simple and low-cost
techniques to promote both sample
integrity and long-term preservation for
major classes of materials are described
in this volume. Traditional treatments of
method and theory usually focus on
prehistoric periods and are limited in
their geographic range. This volume
includes discussions based on various
historical periods on different continents,
as reflected in entries such as Historical
Archaeology, Industrial Archaeology,
Medieval Archaeology, and Classical
Archaeology.

Rowman & Littlefield

Archaeological Theory in the New
Millennium provides an account of the
changing world of archaeological theory
and a challenge to more traditional
narratives of archaeological thought. It
charts the emergence of the new
emphasis on relations as well as
engaging with other current theoretical
trends and the thinkers archaeologists
regularly employ. Bringing together
different strands of global archaeological
theory and placing them in dialogue, the
book explores the similarities and
differences between different
contemporary trends in theory while also
highlighting potential strengths and
weaknesses of different approaches.
Written in a way to maximise its
accessibility, in direct contrast to many
of the sources on which it draws,
Archaeological Theory in the New
Millennium is an essential guide to
cutting-edge theory for students and for

professionals wishing to reacquaint themselves with this field.

Theory in Archaeology Rowman & Littlefield

Temporality in Qualitative Inquiry explores the relationship between time and qualitative research and unpacks some of the conceptual, methodological, practical, and pragmatic areas of qualitative inquiry related to time and temporality. This book advances the understanding and re-evaluation of research practice by examining the passage of time, temporal feeling, and conceptualising of time/temporality in research practice with participants. It provides theoretical and practical insights into how to navigate the concepts of time and temporality in qualitative inquiry. With authors from across the globe and from an array of social sciences including cultural studies, education, health, management and business, psychology, sociology, and sport and exercise, the book explores theoretical, methodological, and practical discussions of time and temporality in order to unpack and elicit meaning and understanding. The editors champion the call for the existence of slow and quick qualitative methodologies and methods. As such, this book is suitable for graduate students and researchers interested in qualitative inquiry, and in disciplines such as education, health research, management, psychology, sociology, and communication studies. An Encyclopedia Routledge
Is archaeology an art or a science? This

question has been hotly debated over the last few decades with the rise of archaeological science. At the same time, archaeologists have seen a change in the intellectual character of their discipline, as many writers have adopted approaches influenced by social theory. The discipline now encompasses both archaeological scientists and archaeological theorists, and discussion regarding the status of archaeology remains polarised. In this 2001 book, Andrew Jones argues that we need to analyse the practice of archaeology. Through an analysis of archaeological practice, influenced by recent developments in the field of science studies, and with the aid of extensive case studies, he develops a new framework which allows the interpretative and methodological components of the discipline to work in tandem. His reassessment of the status and character of archaeology will be of interest to students, scholars and professionals.

Routledge

The History of Archaeology: An Introduction provides global coverage with chapters devoted to particular regions of the world. The regional approach allows readers to understand the similarities and differences in the history of and approach to archaeology in various parts of the world. Each

chapter is written by a specialist scholar with experience of the region concerned. Thus the book focuses on the earliest beginnings of archaeology in different parts of the world, and how it developed from being a pastime for antiquarians and collectors to a serious attempt to obtain information about past societies. Woven into the text are various boxes that explore key archaeologists, sites and important discoveries in the history of archaeology enriching the story of the discipline's development. With such far ranging coverage, including an exploration of the little covered development of Russian and Chinese archaeology, *The History of Archaeology* is the perfect introduction to the history of archaeology for the interested reader and student alike.
