Discovery of the Life-Organizing Principle Open Road Media

This book provides a practical, hands-on guide that provides you with a number of clear step-by-step exercises, which will help you take advantage of the power of LESS. What you will learn from this book: producing dynamic style sheets, or precompiling and including the final articles into your site's pages; using variables, functions, mixins, and operators in your LESS code; using JavaScript to produce styles in your LESS code; using LESS with other libraries, such as Modernizr; creating, importing, or using existing pre-built mixin libraries in your projects; using existing mixin libraries, or creating your own, that you can reuse in future projects.—Back cover.

Everything you wanted to know about physics, biology, and the world at large becomes straightforward once you understand the life-organizing principle. Author E.M. Elsheikh, a mathematician and longtime professor, examines what the principle tells us about nature and life in this academic work. He proves that the secrets of our world reside in the quantum information contained in our DNA and genome. Discover the inner workings of life, and develop a better understanding of a maximum-action principle that explains self-organization, self-replication, and self-evolution. He also explores such topics as laws that describe phylogenetic evolution and ontogenetic development; little-known facts about genetics and evolution, including why Darwinian theory facilitates a more dynamic conception of human nature; extensions of quantum theory; and new foundations of knowledge. By challenging the notions of mainstream biology and physics and questioning assumptions about life being a physical rather than a supernatural phenomenon, you'll stumble upon truths that few others know. Get ready to go on a fascinating journey that challenges paradigms and leads you to the Discovery of the Life-Organizing Principle.

Dynamics of Smart Structures is a practical, concise and integrated text that provides an introduction to the fundamental principles of a field that has evolved over the recent years into an independent and identifiable subject area. Bringing together the concepts, techniques and systems associated with the dynamics and control of smart structures, it comprehensively reviews the differing smart materials that are employed in the development of the smart structures and covers several recent developments in the field of structural dynamics. *Dynamics of Smart Structures* has been developed to complement the author's new interdisciplinary programme of study at Queen Mary, University of London that includes courses on emerging and new technologies such as biomimetic robotics, smart composite structures, micro-electro-mechanical systems (MEMS) and their applications and prosthetic control systems. It includes chapters on smart materials and structures, transducers for smart structures, fundamentals of structural control, dynamics of continuous structures, dynamics of plates and plate-like structures, dynamics of piezoelectric media, mechanics of electro-actuated composite structures, dynamics of thermo-elastic media: shape memory alloys, and controller designs for flexible structures.

This book attempts to document the scientific implausibility of the evolutionary theory. It covers the major problems evolution faces in explaining life origins, and the development of living systems with their complex designs.

This successful text puts personality back into the personality course, integrating the classic insights

of the personality theorists with modern research in a manner that will fascinate and captivate students. Organized around eight basic aspects of personality—psychoanalytic, ego, biological, behaviorist, cognitive, trait, humanistic, and situational/interactionist—the text both explains the classic theories and also explores how the information applies to the student reader. The text presents a balanced, critical, yet optimistic approach. Personality encourages critical thinking about human nature. While holding the highest scientific standards, the text uses unique and provocative pedagogical devices (see below) to capture students' interest and bring the field of personality to life. It has been hailed as the best-written and most relevant personality textbook in the field.

One of the most celebrated poets of the classical world, Pindar wrote odes for athletes that provide a unique perspective on the social and political life of ancient Greece. Commissioned in honor of successful contestants at the Olympic games and other Panhellenic contests, these odes were performed in the victors' hometowns and conferred enduring recognition on their achievements. Andrew M. Miller's superb new translation captures the beauty of Pindar's forty-five surviving victory odes, preserving the rhythm, elegance, and imagery for which they have been admired since antiquity while adhering closely to the meaning of the original Greek. This edition provides a comprehensive introduction and interpretive notes to guide readers through the intricacies of the poems and the worldview that they embody.

The early, organ-specific diagnosis of malignancy continues to be a major unmet medical need. Clearly the ability to establish an early diagnosis of cancer is dependent upon an intimate knowledge of the cancer's biology, which if understood at the molecular level should identify key diagnostic and therapeutic manipulation points. Advances in recombinant gene technology have provided significant understanding of the mechanisms of action of oncogenic viruses, as well as of cancer-associated genomic sequences (onco genes). This text will explore the known molecular genetic, biological, and clinical knowledge of selected human neoplasms that demonstrate association with suspected oncogenic virus and those cytogenetic alterations that either cause or are caused by oncogene activation. The text first reviews the cytogenetics of human cancers linking classical cytogenetics and molecular genetics. Avery A. Sandberg (Roswell Park Memorial Institute, Buffalo, New York) reviews the leukemias and lymphomas, followed by S. Pathak (M. D. Anderson Hospital and Tumor Institute, Houston, Texas), who reviews solid tumors. Functional consideration of oncogenes is highlighted by Keith C. Robbins and Stuart A. Aaronson (NO, Bethesda, Maryland) through their description of the *v-sis* locus and its gene product *p28*; a protein that closely resembles human platelet-derived growth factor (PDGF).

In the Russian wasteland, a man named Talus bears a secret so terrible that it will cost him no less than his life to share it... a secret so terrible that he must share it in order to find those who will help him protect the knowledge that will one day save humanity. He has chosen two brothers, both hermit monks, to join him in his quest. But time is short... and no man is ready to receive the news that Talus must now share with them both: That they are both already dead. *THE KEEPER* is the short story prequel to *Forbidden*, the first novel in *The Books of Mortals* series. First there was the *Circle Trilogy*. Now a new stunning epic begins.

The perfect match of content and format: Craft supplies, a full-color how-to book and nobody-else-but-Klutz creativity, all packed in a sturdy, re-usable plastic jar with a screw-top lid and a rope handle. The whole package is incredibly bright, cheerful, easy to stack and display, and completely shopwear-proof. Start with an empty Klutz Bucket. Fill with wooden animal shapes. Add eight acrylic craft paints, one brush, a fine point black marker and a 40-page Klutz book of full-color, paint-this-critter inspiration. And then, right at the end, toss in a good supply of wiggle eyes. End result? A zoo in a bucket. With it you can paint 24 wooden die-cut blanks into things like Technicolor tigers or polka-dotted pandas, paying absolutely no attention whatsoever to the way they're actually supposed to look.

The Condition Assessment Scheme (CAS) for oil tankers was adopted in 2001 and is applicable to all single-hull tankers of 15 years or older. Although the CAS does not specify structural standards in excess of the provisions of other IMO conventions, codes and recommendations, its requirements stipulate more stringent and transparent verification of the reported structural condition of the ship and that documentary and survey procedures have been properly carried out and completed. The Scheme requires that compliance with the CAS is assessed during the Enhanced Survey Program of Inspections concurrent with intermediate or renewal surveys currently required by resolution A.744(18), as amended.—Publisher's description.

Falling Into the Fire is psychiatrist Christine Montross's thoughtful investigation of the gripping patient encounters that have challenged and deepened her practice. The majority of the patients Montross treats in *Falling Into the Fire* are seen in the locked inpatient wards of a psychiatric hospital; all are in moments of profound crisis. We meet a young woman who habitually commits self-injury, having ingested light bulbs, a box of nails, and a steak knife, among other objects. Her repeated visits to the hospital incite the frustration of the staff, leading Montross to examine how emotion can interfere with proper care. A recent college graduate, dressed in a tunic and declaring that love emanates from everything around him, is brought to the ER by his concerned girlfriend. Is it ecstasy or psychosis? What legal ability do doctors have to hospitalize—and sometimes medicate—a patient against his will? A new mother is admitted with incessant visions of harming her child. Is she psychotic and a danger or does she suffer from obsessive thoughts? Her course of treatment—and her child's future—depends upon whether she receives the correct diagnosis. Each case study presents its own line of inquiry, leading Montross to seek relevant psychiatric knowledge from diverse sources. A doctor of uncommon curiosity and compassion, Montross discovers lessons in medieval dancing plagues, in leading forensic and neurological research, and in moments from her own life. Beautifully written, deeply felt, *Falling Into the Fire* brings us inside the doctor's mind, illuminating the grave human costs of mental illness as well as the challenges of diagnosis and treatment. Throughout, Montross confronts the larger question of psychiatry: What is to be done when a patient's experiences cannot be accounted for, or helped, by what contemporary medicine knows about the brain? When all else fails, Montross finds, what remains is the capacity to abide, to sit with the desperate in their darkest moments. At once rigorous and meditative, *Falling Into the Fire* is an intimate portrait of psychiatry, allowing the reader to witness the humanity of the practice and the enduring mysteries of the mind.
