 SOLVED: Adjust hand brake on ford batum rocam - Fixya
 Rear drum brakes have a tendency to grab and lock-up even without the introduction of brake fluid or gear oil. This is due to over worn shoes contacting too much surface area inside the drum. Locking up can be due to the brake shoe being sprung which allows the very top

and bottom of the shoe to contact the drum. How to Replace Brake Shoes and Drums in Under 90 Minutes SOURCE: replace rear brakes adjust handbrake The hand brake hardly ever needs adjusting. See your hand brake mechanically spreads your rear brake shoe inside the drum. Therefore just replace your rear shoes and make sure they are adjusted right and you should have no more problems with that part of your car. Replace rear brake shoes, 2005 Ford Bantam - Fixya How to Adjust Ford Drum Brakes by Lee Sallings . Many times restoring proper brake pedal height and parking brake function is just a matter of adjusting the rear drum brakes on your Ford vehicle. As the brake shoes wear, the distance between the shoe and the drum increases. This causes the brake pedal or parking brake lever/pedal to move ...
