"Forensic neuropathologist Bennet Omalu, MD, explains the science of brain trauma, offers practical solutions, and recounts the moving stories of the lives, and tragic deaths, of NFL stars cut down by gridiron dementia."-- Cover.

An Introduction, 2d ed. Corwin Press

A cautionary assessment of the rising frequency of brain injuries among young athletes counsels parents on the risks

associated with head trauma while identifying factors that contribute to missed diagnoses and brain damage, in a reference that is complemented by illustrative true stories.

In its second edition, this book takes a fresh approach to the study of sports, presenting key concepts such as socialization, economics, gender, race, ethnicity, religion, politics, the media and the role of sports in society. The authors offer a critical examination but highlight also the many positive aspects of sports. Each chapter concludes with a popular culture section, showing how films, television, video games, music and short stories have contributed to our understanding of sports' significance to our lives. Other features include up-to-date information--such as statistics on player and owner salaries--and a look at recent controversies in sports, such as performance-enhancing drugs, domestic violence, online gambling and the growing concern over concussions and post-career health problems. The value of sports for people with physical disabilities and

special needs is discussed, as well as the development of sports studies programs and the continuing importance of "sportsmanship." The final chapter explores how social media, as well as new forms of virtual reality and the prevalence of video gaming, are reshaping the concept of what constitutes a sport. Instructors considering this book for use in a course may request an examination copy here.

This work looks at the football referee from every discipline and angle: the history of their genesis as gentlemen arbiters in the Victorian era and their adjustment to the increasing sophistication of the laws; statistical analysis; social profile; cultural comparisons from refereeing around the world and in different sports; the outlook from the bottom (Sunday pub leagues) to the top (FIFA); refereeing philosophies (what is the referee's job?); and personal testimonies. Other influences on the games' decisions - linesmen, corruption, the crowd, TV and technology - are also included, together with many anecdotes, such as worst ever blunders.

This concise, user-friendly guide brings together the strongest available evidence with expert recommendations to provide insight into the management of injuries to the athlete's spine, including controversies unique to this area. Divided into three thematic sections, this information will prove invaluable, as many of the real-world questions surrounding care do not have distinct and obvious answers. Considerations for team physician management comprises part I, including on-field assessment of spine injuries and concussion, rehabilitation and return to play, and complications and post-concussion sequelae. The second and third sections discuss injuries to the cervical spine and the thoracolumbar spine, respectively, describing injury evaluation, management, and outcomes in the elite athlete. Spine conditions have been studied extensively in the general population; however, applying this data to the elite athlete is controversial. Numerous external variables make performance of well-designed clinical trials challenging in this population, and

consequently evidence-based recommendations are lacking for the athlete's spine. Practical and engaging, *Spinal Conditions in the Athlete* will be an excellent resource for sports medicine specialists, orthopedic and neurosurgeons, and any clinician treating the active patient.

The concept of 'sustainable urban development' has been pushed to the forefront of policymaking and politics as the world wakes up to the impacts of climate change and the destructive effects of the Anthropocene. Climate change has emerged to be one of the biggest challenges faced by our planet today, threatening both built and natural systems with long-term consequences, which may be irreversible. While there is a vast body of literature on sustainability and sustainable urban development, there is currently limited focus on how to cohesively bring together the vital issues of the planning, development, and management of sustainable cities. Moreover, it has been widely stated that current practices and lifestyles cannot continue if we are to leave a healthy living

planet to not only the next generation, but also to the generations beyond. The current global school strikes for climate action (known as Fridays for Future) evidences this. The book advocates the view that the focus needs to rest on ways in which our cities and industries can become green enough to avoid urban ecocide. This book fills a gap in the literature by bringing together issues related to the planning, development, and management of cities and focusing on a triple-bottom-line approach to sustainability.

The Real Story of a High School Coach is the second work published by Michael Miragliuolo, after the 2011 publication of *An American Boy*. In *The Real Story of a High School Coach*, Miragliuolo analyzes the day-to-day responsibilities of a high school coach, but delves further into the profession attempting to explain the motivation for one to enter this field in the 21st century. He provides a look into the mind of a coach, allowing fellow coaches to reflect on his or her own experiences, as well as introducing those unfamiliar with this undertaking to get a behind-the-scenes look at the occupation. In doing so, Miragliuolo goes into detail about what life is like for a typical high school coach and provides an interesting and motivational look into this world. Michael Miragliuolo has been a high school coach for

roughly twenty years, coaching varsity basketball, baseball, cross country, and soccer. His teams have won many state championships, more than sixty of his former athletes went on to continue athletic careers at the college or university level, and he has won more than two dozen coach of the year awards. Miragliuolo's cross country and baseball teams have been nationally ranked and the cross country program has been featured in many national publications, including USA Today, Runner's World, Coaching Management, and others. He currently lives in Cary, North Carolina and spends summers traveling to Europe.

Managing Organizations for Sport and Physical Activity, fourth edition, presents a clear and concise treatment of managing organizations in sport and physical activity. The four functions of management--planning, organizing, leading, and evaluating--provide a general framework that represents the simplest and best approach for introducing readers to the intricacies of management. For each management function, Chelladurai presents relevant theories and their

practical applications, citing those theoretical models that are most appropriate to the unique aspects of the sports industry. He uses the open systems perspective, placing organizations in the context of their environment and emphasizing the manager's role in adapting and reacting to changes in that environment. To apply theory to sport management practices, Chelladurai provides numerous examples from the fields of physical activity and sport, including professional sports, intercollegiate athletics, health and sports clubs, and recreation/fitness programs. New to the Fourth Edition A chapter on service quality, which describes the notion of quality in sport management services--from the local fitness center to the pro sport arena. It also discusses the measurement of service quality and the gaps in translating customer expectations into the desired service. A new feature providing "An Expert's View," which offers additional perspectives on relevant topics contributed by scholars who research and publish in a specific area. New sidebars on current topics relevant to the field of sport management; some examples include US

Track and Field's SMART goal setting as well as genes and technology of leadership. Pedagogical Aids Developing Your Perspective. Thought-provoking questions ask learners to apply theoretical information to contexts relevant to them from their current experiences or in their future careers. Managing Your Learning. Key points from each chapter enhance comprehension. Strategic Concepts. Key terms lists provide for a shared vocabulary in discussing the major concepts of management. In Brief. Short summaries of the important points in a section help crystallize concepts. To Recap. Brief boxes revisit key concepts discussed earlier in the book. Extensive references to journals, scholarly texts, and relevant websites. Concussion and Traumatic Encephalopathy Springer Nature

In the past decade, few subjects at the intersection of medicine and sports have generated as much public interest as sports-related concussions - especially among youth. Despite growing awareness of sports-related concussions and campaigns to educate athletes, coaches, physicians, and parents of young athletes about concussion recognition and

management, confusion and controversy persist in many areas. Currently, diagnosis is based primarily on the symptoms reported by the individual rather than on objective diagnostic markers, and there is little empirical evidence for the optimal degree and duration of physical rest needed to promote recovery or the best timing and approach for returning to full physical activity. Sports-Related Concussions in Youth: Improving the Science, Changing the Culture reviews the science of sports-related concussions in youth from elementary school through young adulthood, as well as in military personnel and their dependents. This report recommends actions that can be taken by a range of audiences - including research funding agencies, legislatures, state and school superintendents and athletic directors, military organizations, and equipment manufacturers, as well as youth who participate in sports and their parents - to improve what is known about concussions and to reduce their occurrence. Sports-Related Concussions in Youth finds that while some studies provide useful information, much remains unknown about the extent of concussions

in youth; how to diagnose, manage, and prevent concussions; and the short- and long-term consequences of concussions as well as repetitive head impacts that do not result in concussion symptoms. The culture of sports negatively influences athletes' self-reporting of concussion symptoms and their adherence to return-to-play guidance. Athletes, their teammates, and, in some cases, coaches and parents may not fully appreciate the health threats posed by concussions. Similarly, military recruits are immersed in a culture that includes devotion to duty and service before self, and the critical nature of concussions may often go unheeded. According to Sports-Related Concussions in Youth, if the youth sports community can adopt the belief that concussions are serious injuries and emphasize care for players with concussions until they are fully recovered, then the culture in which these athletes perform and compete will become much safer. Improving understanding of the extent, causes, effects, and prevention of sports-related concussions is vitally important for the health and well-being of youth athletes. The findings and

recommendations in this report set a direction for research to reach this goal.

No doubt about it, there was a time when Mickey Crowley was the busiest man in basketball. A legendary, world-class referee with a reputation for humor, fairness, and getting the call right, Mickey always has been a man in motion. He officiated dozens of college games annually from 1962 until 1991. His last game was the NCAA championship battle between Duke and Kansas. A member of six halls of fame, Mickey was on the ground floor in the 1980s when the Big East emerged as the nation's premier basketball conference. His face was a

fixture at Madison Square Garden. Known for his quick wit, Mickey for years has told stories of his biggest games and coaches like Lou Carnesecca, John Thompson, P. J. Carlesimo, John Chaney, Mike Krzyzewski, Rick Pitino, and Bob Knight. Michael Jordan, Patrick Ewing, Shaquille O'Neal, Chris Mullin, and Lew Alcindor (Kareem Abdul-Jabbar) are among the more notable players Mickey has seen up close since he began his officiating career in 1957. Mickey also ran one of the nation's top basketball camps for referees for nearly forty years. He traveled the world officiating games, notably in Puerto Rico, Uruguay, and Yugoslavia. Among his many stops was a stage in Las Vegas, where he once sang a duet with Suzanne Somers. Being a referee was Mickey's part-time job. For years, his full-time job was as a Nassau County administrator who assigned officials for hundreds of high school, college, and junior college sporting events. A native of Queens, New York, he served in the army, drove a truck, tended bar, managed a baseball team, and fathered a family.
