Case Studies in Strategic Management

Cambridge University Press

In this delightful, thoroughly entertaining

picture book about the importance--and difficulty--of telling the truth, the queen's trusty servant, a pangolin, breaks the royal swing and doesn't know what to tell her! Pangolin is enjoying himself on the royal swing in the bright summer sunshine when suddenly, the ropes

break and--OW!--he falls to the ground. What will I tell the queen?! Pangolin worries. He races to the stables to ask his friend Badger. "Tell her the musicians needed the swing's rope for their lutes!" the stablemaster advises. Fox, the castle guard, has a different idea: "Might you say that the King needed to repair his royal jump rope?" Pug, Cat, and Goose all have suggestions, too. But which story will Pangolin tell the queen?! Here is a charming picture book, full of delightful animal friends, about finding the courage to be honest with those around you--and with yourself.

Most business schools use case studies in their courses. However, these are typically based on past cases and

assigned to students to solve. This book describes a new approach for teaching with case studies, which was developed and applied successfully at TUM School of Management. In this approach, student teams write and solve their own case study on a topic concerning current and future businesses. A case can thus be on their own startup or a strategic decision of existing companies. During the course, the students receive intensive coaching while selecting and developing the case topic by the course advisors as well as feedback by industry experts and executives for whom the case is actually a burning question. The authors present 17 cases covering strategic questions for startups and technology companies such as Deutsche Post, BMW, Ryanair, Lufthansa,

Stadtwerke München, Fielmann, adidas, Siemens, Caribou Biosciences, eon, Airbus, Unicredit and UBS.

Firmly rooting its argument in democratic and economic theory, the book argues that a more democratic distribution of communicative power within the public sphere and a structure that provides safeguards against abuse of media power provide two of three primary arguments for ownership dispersal. It also shows that dispersal is likely to result in more owners who will reasonably pursue socially valuable journalistic or creative objectives rather than a socially dysfunctional focus on the 'bottom line'. The middle chapters answer those agents, including the

Federal Communication Commission, who favor 'deregulation' and who argue that existing or foreseeable ownership concentration is not a problem. The final chapter evaluates the constitutionality and desirability of various policy responses to concentration, including strict limits on media mergers.

In 2018, one of the currently largest new museum buildings in Germany was opened in Mannheim, designed by the architects von Gerkan, Marg and Partners. Owing to its unique facade, which is characterized by a bronze-colored metal mesh, the new building of the Kunsthalle Mannheim integrates

confidently with its surroundings. It links up with the historical museum building and has been designed as a "city within the city," offering visitors interesting walking circuits with varying insights and views out. The centerpiece and prelude to the new building is formed by the freely accessible central atrium. In this volume of the gmp focus series, the architects illuminate their design and grant an insight into the challenges of the building task. In addition, an essay from architectural critic Jürgen Tietz examines why museums like the Kunsthalle Mannheim are still needed today.

in South Vietnam and taking the first steps toward bringing the war to the enemy. The compelling story by George

L. MacGarrigle begins in October 1966, when General William C. Westmoreland believed that he had the arms and men to take the initiative from the enemy and that significant progress would be made on all fronts over the next twelve months. Aware of American intentions, North Vietnam undertook a prolonged war of attrition and stepped up the infiltration of its own troops into the South. While the insurgency in the South remained the cornerstone of Communist strategy, it was increasingly overshadowed by main-force military operations. These circumstances, according to MacGarrigle, set the stage for intensified combat. The North Vietnamese and Viet Cong units retained the advantage, fighting only when it suited their purposes and retreating with

impunity into inviolate sanctuaries in Laos and Cambodia.

Ergonomics teaches how to design technology in such a way that it is optimally adapted to the needs, wishes and characteristics of the user. In this context, the concept of the human-machine system has become established. In a systematic way and with a detailed view of the complicated technical and perceptual psychological and methodological connections, this book explains the basics of automotive ergonomics with numerous examples. The application is shown in examples such as package, design of displays and control elements, of environmental ergonomics such as lighting, sound,

vibrations, climate and smell. The design of driver assistance systems from an ergonomic perspective is also a central topic. The book is rounded off by methods of ergonomic vehicle development, the use of mock-ups, driving simulators and tests in real vehicles and prototypes. For the first time, those responsible in the automotive industry and in the field of relevant research are provided with a specialized systematic work that provides the ergonomic findings in the design of today's automobiles. This provides planners and designers of today's automobiles with concrete information for ergonomic product development, enabling them to keep an eye on decisive requirements and subsequent customer acceptance. This

book is a translation of the original German 1st edition *Automobilergonomie* by Heiner Bubb, Klaus Bengler, Rainer E. Grünen & Mark Vollrath, published by Springer Fachmedien Wiesbaden GmbH, part of Springer Nature in 2015. The translation was done with the help of artificial intelligence (machine translation by the service DeepL.com). A subsequent human revision was done primarily in terms of content, so that the book will read stylistically differently from a conventional translation. Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors.

First published in 1972, *The Great Bridge* is the classic account of one of the greatest engineering feats of all time.

Winning acclaim for its comprehensive look at the building of the Brooklyn Bridge, this book helped cement David McCullough's reputation as America's preeminent social historian. Now, *The Great Bridge* is reissued as a Simon & Schuster Classic Edition with a new introduction by the author. This monumental book brings back for American readers the heroic vision of the America we once had. It is the enthralling story of one of the greatest events in our nation's history during the Age of Optimism -- a period when Americans were convinced in their hearts that all great things were possible. In the years around 1870, when the project was first undertaken, the concept of building a great bridge to span the East River between the great

cities of Manhattan and Brooklyn required a vision and determination comparable to that which went into the building of the pyramids. Throughout the fourteen years of its construction, the odds against the successful completion of the bridge seemed staggering. Bodies were crushed and broken, lives lost, political empires fell, and surges of public emotion constantly threatened the project. But this is not merely the saga of an engineering miracle: it is a sweeping narrative of the social climate of the time and of the heroes and rascals who had a hand in either constructing or obstructing the great enterprise. Amid the flood of praise for the book when it was originally published, *Newsday* said succinctly "This is the definitive book on the event. Do not wait for a better try:

there won't be any."
