First published in 1919 by
Ezra Pound, Ernest
Fenollosa's essay on the

Chinese written language
has become one of the
most often quoted
statements in the history
of American poetics. As
edited by Pound, it
presents a powerful
conception of language
that continues to shape
our poetic and stylistic
preferences: the idea that
poems consist primarily of
images; the idea that the

sentence form with active
verb mirrors relations of
natural force. But
previous editions of the
essay represent Pound's
understanding—it is fair to
say, his appropriation—of
the text. Fenollosa's
manuscripts, in the
Beinecke Library of Yale
University, allow us to see
this essay in a different
light, as a document of

early, sustained cultural interchange between North America and East Asia. Pound's editing of the essay obscured two important features, here restored to view: Fenollosa's encounter with Tendai Buddhism and Buddhist ontology, and his concern with the dimension of sound in Chinese poetry. This book is the definitive critical edition of Fenollosa's important work. After a substantial Introduction, the text as edited by Pound is presented, together with his notes

and plates. At the heart of the edition is the first full publication of the essay as Fenollosa wrote it, accompanied by the many diagrams, characters, and notes Fenollosa (and Pound) scrawled on the verso pages. Pound's deletions, insertions, and alterations to Fenollosa's sometimes ornate prose are meticulously captured, enabling readers to follow the quasi-dialogue between Fenollosa and his posthumous editor. Earlier drafts and related talks reveal the development of

Fenollosa's ideas about culture, poetry, and translation. Copious multilingual annotation is an important feature of the edition. This masterfully edited book will be an essential resource for scholars and poets and a starting point for a renewed discussion of the multiple sources of American modernist poetry.

 The heart of this book is a series of etymological

lessons, in which approximately 2300 Chinese characters are classified according to 224 'primitives' upon which they are based. For each character Father Wieger gives the modern form, its archaic form, literary pronunciation (Wade system), explanations of origin, semantic content of component parts, related characters, variants forms, quotations of classical usage, and similar material. To make his book more useful Father Wieger has also

incorporated a tremendous number of reading aids for the student - listings of the primitives; an index of the characters analyzed, arranged by number of strokes; a listing of 858 phonetic elements, arranged by number of strokes; a listing of about 10,000 characters by phonetic element; a lexicon by transliteration, comprising about 7,000 characters; and a lexicon of about 10,000 characters according to the customary modern system of 214 radicals

devised by K'ang-hsi. [The Chinese Language](#) CreateSpace

Easy Introduction to the Study of Chinese Characters
 Independently Published
 An excerpt from "INTRODUCTION TO ANALYSIS OF CHINESE CHARACTERS" THE author of the great Chinese English dictionary Mr. Giles, has not hesitated to express most trenchantly his contempt of etymology as it has been applied to Chinese Characters. He says that "Much of the etymology of the Shuo Wen is childish in the extreme", and that

the phonetic principle of combination is the only one of which we can pretend to know anything. Notwithstanding the ridicule heaped upon it, scholars, like Chalmers, Chalfant, Wieger and others have continued to pursue the fascinating study of the origin of these symbols and have given us most interesting results. These results are so convincing that in the teaching of character writing we have unhesitatingly adopted the principle that the etymology of the earliest

Chinese writers on the subject, childish though it may often be and fanciful, is yet superior to the numerous mnemonics that have been invented by foreign students to assist in the difficult task of memorizing the forms of a few thousand characters. The student of these pages may often consider the etymology suggested fanciful and the logic of the combinations farfetched but the following consideration should be borne in mind. They are the products of Chinese

fancy and imagination and to some extent show the workings of the Chinese mind. Therefore they interest us who are students of Chinese thought. Moreover they often may only seem to be fanciful because we are ignorant of the ancient customs out of which they arise, or of the forms of the utensils of which they are pictures, or of the variations of pronunciation in the different dialects. If any one of us were entrusted with the task of inventing written symbols for both

concrete objects and abstract ideas it is doubtful if we would produce anything much less fanciful and we certainly could produce nothing of such rich historic interest, as certainly invests the 3000 most primitive characters. Writing Chinese characters is a task of memory. Modern pedagogy insists on the value of logical or even fanciful links between ideas for fixing them in mind. Those who try to learn Chinese characters almost invariably grope

for some association of ideas, some logic in the formation by which to hold them in memory. We have no doubt that the groupings which have been arrived at already by a study of the ancient inscriptions of the early seal writings and etymologies are more interesting, more logical, and wider in- range than any memory system that has been or can be invented by the superficial study of the characters as written with the modern Chinese pen. These etymological

studies enlist the interest of the historic imagination to aid the dry-as-dust task of committing to memory these curious symbols of the thought of three or four millenniums....

 "The study of the analysis of Chinese characters is useful to those who merely wish to read or write the Chinese language. Part of the work of any analysis is to organize the characters into groups which reveal their relationships and thus lighten the burden of memorizing. A still more important function of character analysis is to recommend the individual written words to the

student's own linguistic powers so that he may feel at home with them. This is done by showing, as far as possible, how they reached their present shape and the reasoning that guided the generations of people who invented and perfected them." From the Preface. A Wade-Giles - Pinyin Conversion Table has been added to this edition.

Analysis of Chinese Characters University of Hawaii Press

This book is a much-needed scholarly

intervention and postcolonial corrective that examines why and when and how misunderstandings of Chinese writing came about and showcases the long history of Chinese theories of language. 'Ideography' as such assumes extra-linguistic, trans-historical, universal 'ideas' which are an outgrowth of Platonism and thus unique to European history. Classical Chinese discourse assumes that language (and writing) is an arbitrary artifact

invented by sages for specific reasons at specific times in history. Language by this definition is an ever-changing technology amenable to historical manipulation; language is not the House of Being, but rather a historically embedded social construct that encodes quotidian human intentions and nothing more. These are incommensurate epistemes, each with its own cultural milieu and historical context. By comparing these two

traditions, this study historicizes and decolonializes popular notions about Chinese characters, exposing the Eurocentrism inherent in all theories of ideography. Ideography and Chinese Language Theory will be of significant interest to historians, sinologists, theorists, and scholars in other branches of the humanities.

Dictionary of Old Chinese*

Chinese is a discourse-oriented language and the underlying mechanisms of the language involve encoding and decoding so the language can be correctly delivered and understood. To date, there has been a lack of consolidation at the discourse level such that a reference framework for understanding the language in a top-down fashion is still underdeveloped. The Routledge Handbook of

Chinese Discourse Analysis is the first to showcase the latest research in the field of Chinese discourse analysis to consolidate existing findings, put the language in both theoretical and socio-functional perspectives, offer guidance and insights for further research and inspire innovative ideas for exploring the Chinese language in the discourse domain. The book is aimed at both students and scholars researching in the areas of Chinese

linguistics and discourse analysis.

*Remembering Simplified
Hanzi 1 First Second*

This is the first genuine etymological dictionary of Old Chinese written in any language. As such, it constitutes a milestone in research on the evolution of the Sinitic language group. Whereas previous studies have emphasized the structure of the Chinese characters, this pathbreaking dictionary places primary emphasis on the sounds and meanings of Sinitic roots. Based on more than three

decades of intensive investigation in primary and secondary sources, this completely new dictionary places Old Chinese squarely within the Sino-Tibetan language family (including close consideration of numerous Tiberto-Burman languages), while paying due regard to other language families such as Austroasiatic, Miao-Yao (Hmong-Mien), and Kam-Tai. Designed for use by nonspecialists and specialists alike, the dictionary is highly accessible, being

arranged in alphabetical order and possessed of numerous innovative lexicographical features. Each entry offers one or more possible etymologies as well as reconstructed pronunciations and other relevant data. Words that are morphologically related are grouped together into "word families" that attempt to make explicit the derivational or other etymological processes that relate them. The dictionary is preceded by a substantive and

significant introduction that outlines the author's views on the linguistic position of Chinese within Asia and details the phonological and morphological properties, to the degree they are known, of the earliest stages of the Chinese language and its ancestor. This introduction, because it both summarizes and synthesizes earlier work and makes several original contributions, functions as a useful reference work all on its own.

 This book presents the

most comprehensive synthesis and analysis of major developments in reforming programs in modernizing the Chinese writing system. It traces the language policy and planning related developments for Chinese characters, with particular emphasis on post-1950 period in the People's Republic of China (PRC) and the more recent challenges that technology, and particularly the World Wide Web, have posed for the language.

This ground breaking study dispels the common belief that Chinese 'doesn't have words' but instead 'has characters'. Jerome Packard's book provides a comprehensive discussion of the linguistic and cognitive nature of Chinese words. It shows that Chinese, far from being 'morphologically impoverished', has a different morphological system because it selects different 'settings' on parameters shared by all languages. The analysis of

Chinese word formation therefore enhances our understanding of word universals. Packard describes the intimate relationship between words and their components, including how the identities of Chinese morphemes are word-driven, and offers new insights into the evolution of morphemes based on Chinese data. Models are offered for how Chinese words are stored in the mental lexicon and processed in natural speech, showing that much of what native

speakers know about words occurs innately in the form of a hard-wired, specifically linguistic 'program' in the brain. Chinese Character Dictionary University of Hawaii Press

Learning Chinese can be frustrating and difficult, partly because it's very different from European languages. Following a teacher, textbook or language course is not enough. They show you the characters, words and grammar you need to become proficient in Chinese, but they don't

teach you how to learn them! Regardless of what program you're in (if any), you need to take responsibility for your own learning. If you don't, you will miss many important things that aren't included in the course you're taking. If you study on your own, you need to be even more aware of what you need to do, what you're doing at the moment and the difference between them. Here are some of the questions I have asked and have since been asked many times by

students: How do I learn characters efficiently? How do I get the most out of my course or teacher? Which are the best learning tools and resources? How can I become fluent in Mandarin? How can I improve my pronunciation? How do I learn successfully on my own? How can I motivate myself to study more? How can I fit learning Chinese into a busy schedule? The answers I've found to these questions and many others form the core of

this book. It took eight years of learning, researching, teaching and writing to figure these things out. Not everybody has the time to do that! I can't go back in time and help myself learn in a better way, but I can help you! This book is meant for normal students and independent language learners alike. While it covers all major areas of learning, you won't learn Chinese just by reading this book. It's like when someone on TV teaches you how to cook: you won't get to eat the

delicious dish just by watching the program; you have to do the cooking yourself. That's true for this book as well. When you apply what you learn, it will boost your learning, making every hour you spend count for more, but you still have to do the learning yourself. This is what a few readers have said about the book: "The book had me nodding at a heap of things I'd learnt the hard way, wishing I knew them when I started, as well as highlighting areas that I'm currently missing in my

study." - Geoff van der Meer, VP engineering
"This publication is like a bible for anyone serious about Chinese proficiency. It's easy for anyone to read and written with scientific precision." - Zachary Danz, foreign teacher, children's theatre artist
About me I started learning Chinese when I was 23 (that's more than eight years ago now) and have since studied in many different situations, including serious immersion programs abroad, high-intensity programs in Sweden,

online courses, as well as on the side while working or studying other things. I have also successfully used my Chinese in a graduate program for teaching Chinese as a second language, taught entirely in Chinese mostly for native speakers (the Graduate Institute for Teaching Chinese as a Second Language at National Taiwan Normal University). All these parts have contributed to my website, Hacking Chinese, where I write regularly about how to learn Mandarin.

The ideal workbook for students to practice learning to read, recognise, and write the 100 most common Chinese medical Chinese characters! This work forms an integral part of the Chinese Medicine Language Series for students and practitioners who are engaged in the study of Chinese medical language. It presents the first 100 characters based upon frequency of use in medical texts, as well as

an overall program designed to help the student acquire the necessary tools for building a thorough vocabulary. This first volume presents the basics of Chinese characters along with the etymologies of the 100 most commonly seen characters. Designed as a workbook, it offers students practice in learning to read, recognise, and write the characters and provides the basic tools that students need to become familiar with the written

language of Chinese medicine and thereby enrich their studies. *The Way of Chinese Characters* Walter de Gruyter GmbH & Co KG "DeFrancis's book is first rate. It entertains. It teaches. It demystifies. It counteracts popular ignorance as well as sophisticated (cocktail party) ignorance. Who could ask for anything more? There is no other book like it. ... It is one of a kind, a first, and I would not only buy it but I would recommend it to friends and colleagues, many of

whom are visiting China now and are adding 'two-week-expert' ignorance to the two kinds that existed before. This is a book for everyone." --Joshua A. Fishman, research professor of social sciences, Yeshiva University, New York "Professor De Francis has produced a work of great effectiveness that should appeal to a wide-ranging audience. It is at once instructive and entertaining. While being delighted by the flair of his novel approach, the reader will also be led to

ponder on some of the most fundamental problems concerning the relations between written languages and spoken languages. Specifically, he will be served a variety of information on the languages of East Asia, not as dry pedantic facts, but as appealing tidbits that whet the intellectual appetite. The expert will find much to reflect on in this book, for Professor DeFrancis takes nothing for granted." --William S.Y. Wang, professor of linguistics, University of California at Berkeley

How to Study and Write Chinese

Characters Forgotten Books

As the first volume of a two-volume set on Chinese ancient characters and newly unearthed literature, this book brings together the author's research articles that discuss the development of Chinese characters and the tradition of Chinese palaeography. The 23 chapters in this book

focus on two aspects of Chinese characters. The first 13 chapters centre on the evolution of Chinese characters, analysing the composition system and its transformation, the motivation, and mechanisms behind its evolution, as well as the methodology of the study of ancient characters. The subsequent 10 chapters mainly revolve around *Shuowen Jiezi*, one of the oldest character

dictionaries in China. The author offers a novel understanding of the core issues related to this most important philological work, such as the version of the dictionary, misunderstandings in previous scholarship, and its relations with other palaeographical materials. The title will appeal to students and scholars of Sinology, Chinese philology, and palaeography, as well as Chinese characters.
