Electrical Safety is crucial as electricity can be lethal. This book is primarily about the electrical and electromagnetic radiation related questions I have been asked over the years and the responses I have provided throughout Australia. I have found that this question and answer style of writing is well accepted in the workplace particularly amongst employees and middle management. Employees and their managers can carry this very

practical book around with them and have access to solutions to questions they may be asked throughout their day. Whilst the advice of an OHS expert should always be sought due to the merits of each situation, this book is a good guide in basic electrical safety risk management.

Most people know that electric power

lines, like the wiring in our homes, can cause serious electric shocks if we're not careful. Many people also want to know whether the electric and magnetic fields (EMF) produced by power lines and other electrical devices cause health effects. The purpose of this booklet is to answer some common questions that the Bonneville Power Administration (BPA) receives about the possible effects of power lines on health. First, some basic electrical terms are defined, and electric and magnetic fields are defined. Next, answers are given to several questions about recent scientific studies. Some important information about electrical safety follows. We then describe how BPA is addressing public concerns about potential health effects of power lines. The last section tells you how to obtain more detailed information about the health and safety issues summarized in this booklet.
