Supply Chain Cases Springer Science & Business Media

Human beings have wondered about the stars since the dawn of the species. Does life exist out there - intelligent life, even - or are we alone? The quest for life in the universe touches on fundamental hopes and fears. It touches on the essence of what it means to formulate a theory, grasp a concept, and have an imagination. This book traces the history of the science of this area and the development of new schools in philosophy. Its essays seek to establish the history and philosophy of astrobiology as research fields in their own right by addressing cognitive, linguistic, epistemological, ethical, cultural, societal, and historical perspectives on astrobiology. The book is divided into three sections. The first (Cognition) focuses on the human mind and what it contributes to the search for life. It explores the emergence and evolution of terrestrial life and cognition and the challenges humans face as they reach to the stars. The essays raise philosophical questions, pose ethical dilemmas, and offer a variety of approaches, including one from cognitive zoology, in formulating a theory of the universal principles of intelligence, the limits of human conceptual abilities, and the human mind's encounter with the unknown. The

second section (Communication) examines the linguistic and semiotic requirements for interstellar communication. What is needed for successful communication? Are there universal rules for success? What are the possible features - and limitations - of exolanguages? What is required for recognizing a message as a message? The third section (Culture) considers cultural and societal issues. It explores astrobiology's organization as a scientific discipline, its responsibilities to the public sphere, and its theological implications. It reviews the historically important panspermia hypothesis, along with the popularization of astrobiology and its ongoing institutionalisation. Through addressing these questions, we take our first steps in exploring the immense terra incognita of extraterrestrial life and the human mind.

Effective Implementation of Management Systems John Wiley & Sons

The automotive industry is still one of the world's largest manufacturing sectors, but it suffers from being very technology-focused as well as being relatively short-term focused. There is little emphasis within the industry and its consultancy and analyst supply network on the broader social and economic impacts of automobility and of the sector that provides it. The Global Automotive Industry addresses this need and is a first port of call for any academic, official or consultant wanting an overview of the state of the industry. An international team of specialist

researchers, both from academia and business, review and analyse the key issues that make vehicle manufacturing still the world's premier manufacturing sector, closely tied in with the fortunes of both established and newly emerging economies. In doing so, it covers issues related to manufacturing, both established practices as well as new developments; issues relating to distribution, marketing and retail, vehicle technologies and regulatory trends; and, crucially, labour practices and the people who build cars. In all this it explains both how the current situation arose and also likely future trajectories both in terms of social and regulatory trends, as the technological, marketing and labour practice responses to those, leading in many cases to the development of new business models. Key features Provides a global overview of the automotive industry, covering its current state and considering future challenges Contains contributions from international specialists in the automotive sector Presents current research and sets this in an historical and broader industry context Covers threats to the industry, including globalization, economic and environmental sustainability The Global Automotive Industry is a must-have reference for researchers and practitioners in the automotive industry and is an excellent source of information for business schools, governments, and graduate and undergraduate students in automotive engineering.

A decade ago Leaf, a cancer survivor himself, began to investigate why we had made such limited progress fighting this terrifying disease. The result is a gripping narrative that reveals why the public's immense investment in research

has been badly misspent, why scientists seldom collaborate and share their data, why new drugs are so expensive yet routinely fail, and why our best hope for progress-- brilliant young scientists-- are now abandoning the search for a cure.

The Future of Scholarly Communication
IGI Global

Onomastics in Contemporary Public Space aims at analysing names and name-giving from an intercultural perspective, within the context of contemporary public space. As was the case of Name and Naming: Synchronic and Diachronic Perspectives (Cambridge Scholars Publishing, 2012), the geographical areas investigated in the studies included in this volume are very diverse, referring not only to European cultural space, but also to American, Asian, African and Australian contexts. Being a collective work, the book brings together 49 specialists from 18 countries; namely Australia, Belgium, Finland, France, Germany, Israel, Italy, Japan, Malta, the Netherlands, Poland, Romania, Russia, Singapore, South Africa, Spain, the United Kingdom and the USA. Thematically, the volume is organised so that it may cover all the dimensions of public space, as far as onomastics is concerned. The specific areas studied are: the theory of names; names of public places (linguistic landscapes); names of public, economic, cultural, religious and sports institutions (names of business establishments, religious institutions - places of worship - and cultural associations, as well as names in journals and magazines); names of objects/entities resulting from various processes in public space (names of foods, drinks and food brands, code names of collaborators in secret service organisations, names in literature,

nicknames/bynames/pseudonyms in the world of politics, high life, art and sport, names in virtual space, and zoonyms); and miscellanea. The originality and topicality of the subject lie in the multidisciplinary viewpoint adopted in the research, in which onomastics merges with adjacent linguistic disciplines, such as sociolinguistics, psycholinguistics and pragmatics, as well as other sciences, such as history, literature, anthropology, politics, economy and religion.

Scholarly Publishing and Research Methods Across Disciplines CRC Press

This book constitutes the joint refereed proceedings of the 20th Symposium on the Integration of Symbolic Computation and Mechanized Reasoning, Calculemus 2013, 6th International Workshop on Digital Mathematics Libraries, DML 2013, Systems and Projects, held in Bath, UK as part of CICM 2013, the Conferences on Intelligent Computer Mathematics. The 7 revised full papers out of 18 submissions for MKM 2013, 5 revised full papers out of 12 submissions for Calculemus 2013, 6 revised full papers out of 8 submissions for DML 2013, and 12 revised full papers out of 16 submissions for Systems and Project track presented together with 3 invited talks were carefully reviewed and selected, resulting in 33 papers from a total of 73 submissions.

Handbook of Research on the Global View of Open Access and Scholarly Communications Springer

This edited collection charts the development of, and prospects for, conceiving knowledge as a social phenomenon. The origin, aims and growth of the journal *Social Epistemology*, founded in 1987, serves to anchor each of the book's

contributions. Each contribution offers a unique, but related, insight on current issues affecting the organization and production of knowledge. In addition, each contribution proposes necessary questions, practices and frameworks relevant to the rapidly changing landscape of our conceptions of knowledge. The book examines the commercialization of science, the neoliberal university, the status and conduct of philosophy, the cultures of computer software and social networking, the practical, political and anthropological applications of social epistemology, and how we come to define what human beings are and what activities human beings can, and should, sustain. A diverse group of noted, international scholars lends necessary, original and challenging perspectives on our collective approach to knowledge. This book was originally published as a special issue of *Social Epistemology*.

Curriculum Design and Classroom Management: Concepts, Methodologies, Tools, and Applications CRC Press

Although China is now the 'factory of the world', there is no reason to expect that it will always be content with manufacturing labor-intensive goods for foreign corporations. Scholars must now ask: What is the current level of innovation in China? And how can we face this challenge and renovate industrial production and innovation capacities in developed countries? This edited volume investigates the unique characteristics of Chinese innovation and regional development, China's policy framework, and the role that transnational corporations play in China's increasing innovation activities. This book contributes to the heated debate regarding pathways for

technology progress and regional development in developing countries, and identifies the ways in which local production networks respond to different configurations of external linkages. Linking patterns of global and local production networks with the trajectories of technology development and regional development allows the authors to theorize and test whether, and how, particular configurations of production networks generate divergent long-term local productivity growth and technological development outcomes. *Innovation and Regional Development in China* will be of interest to geographers, economists, China specialists, development specialists, and scholars working on innovation and regional development in developing areas and transition countries.

Handbook of Technological Pedagogical Content Knowledge (TPACK) for Educators IGI Global

The wave of protests and populist uprisings in the Middle East has heightened the focus on a volatile region. But the emphasis on political issues has obscured underlying issues concerning education, infrastructure, research, innovation, entrepreneurship and sustainable economic and social development. This volume, emerging in the aftermath of a conference and workshop on science and technology in the region, presents contributions from a range of experts from the Middle East, Europe, and the United States to provide fresh new insights and perspectives on the challenges and prospects for regional development in the changing global context of our time. The authors explore such topics as: the role of information and communication technologies; mindset change in support of investment in intangible assets and

risk-taking; how to approach cultural issues, institutions and governance; collaborations with other regions, and; benchmarking performance while drawing lessons of relevance for the special local context. Ultimately, they offer a number of precise policy recommendations and practical insights for creating an enabling environment for capturing economic, political, and social opportunity.

Ticks and Tick-Borne Diseases
Cambridge Scholars Publishing

The notion of 'the West' is commonly used in politics, the media, and in the academic world. To date, our idea of 'the West' has been largely assumed and effective, but has not been examined in detail from a theoretical perspective. *Uses of 'the West'* combines a range of original and topical approaches to evaluate what 'the West' really does, and how the idea is being used in everyday political practice. This book examines a range of uses of 'the West', and traces how 'the West' works in a broad array of conceptual and empirical contexts, ranging from the return of geopolitics - via a critical review of the debates surrounding Samuel Huntington's Clash of Civilization thesis - to the question of the future of 'the West'. Analysis extends further to the repercussions of the war on terror on Western democracy and the processes of delineating the Western from the non-Western, as well as observations of the institutional transformations of Western order.

The History and Philosophy of Astrobiology IGI Global

This volume comprises the proceedings of the 2010 International Symposium of the ICA Commission on the History of Cartography. The nineteen papers reflect the research interests of the Commission

which span the period from the Enlightenment to the evolution of Geographical Information Science. Apart from studies on general cartography, the volume, which reflects some co-operation with the ICA Commission on Maps and Society and the United States Geological Survey (USGS), contains regional studies on cartographic endeavours in Northern America, Brazil, and Southern Africa. The ICA Commission on Maps and Society participated as its field of study often overlaps with that of the ICA Commission on the History of Cartography. The USGS which is the official USA mapping organisation, was invited to emphasise that the ICA Commission on the History of Cartography is not only interested in historical maps, but also has as mandate the research and document the history of Geographical Information Science. The ICA Commission on Maps and Society participated as its field of study often overlaps with that of the ICA Commission on the History of Cartography. An Analysis of Benedict Anderson's Imagined Communities IGI Global

Educational pedagogy is a diverse field of study, one that all educators should be aware of and fluent in so that their classrooms may succeed. *Curriculum Design and Classroom Management: Concepts, Methodologies, Tools, and Applications* presents cutting-edge research on the development and implementation of various tools used to maintain the learning environment and present information to pupils as

effectively as possible. In addition to educators and students of education, this multi-volume reference is intended for educational theorists, administrators, and industry professionals at all levels. *Innovation and Regional Development in China* Elsevier

In an information and knowledge society, access to information and knowledge is a basic human right, making equitable and fair access to information and knowledge paramount. Open Access (OA) plays a huge role in addressing inequities as well as broad-based and inclusive scientific progress. On the surface, the number of publications discussing OA issues from various angles are on the rise. However, what is missing is a comprehensive assessment of the extent of OA implementation and a discussion of how to proceed in integrating OA issues from various perspectives. *The Handbook of Research on the Global View of Open Access and Scholarly Communications* articulates OA concepts and issues while demystifying the state-of-the-art knowledge domain in the areas of OA and scholarly communications from diverse perspectives as well as implications for the information and knowledge society. Covering topics such as ethics, copyright challenges, and open access initiatives, this book is a dynamic resource for publishers, librarians, higher education administrators, policymakers, students and educators of higher education, researchers, and academicians. *Introduction to Research Methods in Psychology* Springer Science & Business Media

Across a variety of disciplines, data and statistics form the backbone of knowledge. To ensure the reliability and validity of data, appropriate measures must be taken in conducting studies and

reporting findings. *Research Methods: Concepts, Methodologies, Tools, and Applications* compiles chapters on key considerations in the management, development, and distribution of data. With its focus on both fundamental concepts and advanced topics, this multi-volume reference work will be a valuable addition to researchers, scholars, and students of science, mathematics, and engineering.

Encyclopedia of Library and Information Sciences Springer

Global rankings and the Geopolitics of Higher Education is an examination of the impact and influence that university rankings have had on higher education, policy and public opinion in recent years. Bringing together some of the most informed authorities on this very complex issue, this edited collection of specially commissioned chapters examines the changes affecting higher education and the implications for society and the economy. Split into four interrelated sections, this book covers: The development of rankings in higher education, how they have impacted upon both the production of knowledge and its geography, and their influence in shaping policymaking. Overviews of the significance of rankings for higher education systems in Europe, Asia, Africa, Russia, South America, India and North America. An analysis of rankings in relation to key concerns that pervade contemporary higher education. Examination of the role rankings are likely to play in the future directions for higher education. This is a significant scholarly work that analyses in depth an important development in higher education systems, and which is likely to have an important influence upon how we understand the higher education policy-making process – past, present

and future. It provides new analysis and conceptual understanding for researchers, and firm evidence for policy makers to use when addressing the value of rankings in measuring the quality of their institutions. Besides bringing together a powerful cast of academics, this book incorporates contributions from heads of important international higher education organisations – from both those involved in making and also in administering key decisions. This timely, reflective and accessible book forms crucial reading for those studying the subject of rankings, as well as the broader implications and unintended consequences of rankings on national higher education policies. Extending beyond academic researchers and students, this book will also be of significant interest to policymakers, higher education leaders and key stakeholders.

Global Rankings and the Geopolitics of Higher Education IGI Global
Toward a Philosophical Approach to Psychiatry presents a collection of philosophical and historical papers authored by the psychiatrist Kenneth S. Kendler. Written primarily for psychiatrists, psychologists, and other scholars in the mental health professions, as a body of work, the papers offer an accessible distillation of many of the best current ideas from the philosophy of mind and the philosophy of science as applied to problems in psychiatric research and practice. The continuous thread running through these papers is a looking behind the common assumptions that nourish unrealistic expectations about what can be discovered about the nature of psychiatric disorders in the short-term--without abandoning a commitment to scientific progress in the

long run. After a foreword by Robert Freedman, the book commences with Peter Zachar's intellectual biography of Kendler followed by Kendler's own introductions, providing an autobiographical and conceptual background for each paper. In addition to Kendler's own writings, this collection includes many important collaborative efforts, including papers with John Campbell, Carl Craver, Kenneth Schaffner, Erik Engstrom, Rodrigo Munoz, George Murphy, and Peter Zachar.

Handbook of Scientific Proposal Writing
IGI Global

Investigators, their home institutions, and funding agencies play significant roles in the development and outcomes of scientific projects. Submitting a proposal to a funding agency is only one dimension of a multivariable and complex funding process, and understanding this is a good first step toward unlocking the puzzle behind why some research p

Handbook of Research on Scholarly Publishing and Research Methods
Routledge

This book provides an overview and analysis of the key publications and authors in the study of supply chain management since its inauguration in the 1980s. Reviewing 1699 published research works and case studies, it is the first to combine and analyse publication data and citations in order to assess the most popular topics and authors, and their effect on the discipline's development. Identifying key scholars and articles throughout supply chain management, the author explores research themes such as the emphasis on sustainability and the environment post-financial crisis, as well as a growing interest in food supply chain case

studies. New approaches are identified to increase the number of cases which can be put towards building future research projects.

Multilingual and Multimodal Information Access Evaluation Simon and Schuster

The latest inventions in computer technology influence most of human daily activities. In the near future, there is tendency that all of aspect of human life will be dependent on computer applications. In manufacturing, robotics and automation have become vital for high quality products. In education, the model of teaching and learning is focusing more on electronic media than traditional ones. Issues related to energy savings and environment is becoming critical. Computational Science should enhance the quality of human life, not only solve their problems. Computational Science should help humans to make wise decisions by presenting choices and their possible consequences.

Computational Science should help us make sense of observations, understand natural language, plan and reason with extensive background knowledge. Intelligence with wisdom is perhaps an ultimate goal for human-oriented science. This book is a compilation of some recent research findings in computer application and computational science. This book provides state-of-the-art accounts in Computer Control and Robotics, Computers in Education and Learning Technologies, Computer Networks and Data Communications, Data Mining and Data Engineering, Energy and Power Systems, Intelligent Systems and Autonomous Agents, Internet and Web Systems, Scientific Computing and Modeling, Signal, Image and Multimedia Processing, and Software Engineering.

Research evaluation metrics Springer

This book constitutes the refereed proceedings of the Second International Conference on Multilingual and Multimodal Information Access Evaluation, in continuation of the popular CLEF campaigns and workshops that have run for the last decade, CLEF 2011, held in Amsterdam, The Netherlands, in September 2011. The 14 revised full papers presented together with 2 keynote talks were carefully reviewed and selected from numerous submissions. The papers accepted for the conference included research on evaluation methods and settings, natural language processing within different domains and languages, multimedia and reflections on CLEF. Two keynote speakers highlighted important developments in the field of evaluation: the role of users in evaluation and a framework for the use of crowdsourcing

experiments in the setting of retrieval evaluation.

Intellectual Paths and Pathologies: How Small Events in Scholarly Life

Accidentally Grow Big Springer

The Encyclopedia of Library and Information Sciences, comprising of seven volumes, now in its fourth edition, compiles the contributions of major researchers and practitioners and explores the cultural institutions of more than 30 countries. This major reference presents over 550 entries extensively reviewed for accuracy in seven print volumes or online. The new fourth edition, which includes 55 new entries and 60 revised entries, continues to reflect the growing convergence among the disciplines that influence information and the cultural record, with coverage of the latest topics as well as classic articles of historical and theoretical importance.
