At a time when traditional dating practices are being replaced with new ways to meet potential partners, this book provides fresh insights into how are men responding to new ways of dating. Drawing upon original research, this book examines a wide range of contemporary dating practices that includes speed dating, holiday romances, use of dating apps, online sex seeking and dogging. It reveals the ways in which men draw upon traditional models of masculinity to negotiate these changes;

but also, the extent to which men are responding by elaborating new masculinities. Through an investigation of the dynamics of heterosexuality and masculinity, this book highlights the importance attached to authenticity, and the increasing marketization and commodification of dating. It argues that in a post-truth world, men must also come to terms with a post-trust dating landscape. Combining rich empirical material with keen theoretical analysis,

this innovative work will have interdisciplinary appeal for students and scholars of sociology, media studies, cultural studies, and gender studies.

The book explores contemporary selfie-taking practices; digital experiences of love, romance and infidelity; sexting rituals; self-tracking habits; strategies used by the Internet famous; and the power of hashtag campaigns and

memes in espousing a cause. Rejecting binary narratives on digital cultures, it showcases the fascinating ways in which we use our digital devices, social media platforms, and apps by drawing upon academic research, everyday observations and a determination to challenge assumptions and hasty generalizations. It also engages with emerging narratives on online authenticity, privacy, digital detox, and the digital divides prevalent both in India and abroad.

 A vital, timely text on the viruses that cause pandemics and how to face them, by the New York Times bestselling author of *How Not to Die*. As the world grapples with the devastating impact of COVID-19, Dr Michael Greger reveals not only what we can do to protect ourselves and our loved ones during a pandemic, but also what human society must rectify to reduce the likelihood of even worse catastrophes in the future. From

tuberculosis to bird flu and HIV to coronavirus, these infectious diseases share a common origin story: human interaction with animals. Otherwise known as zoonotic diseases for their passage from animals to humans, these pathogens – both pre-existing ones and those newly identified – emerge and re-emerge throughout history, sparking epidemics and pandemics that have resulted in millions of deaths around the world. How did these diseases come about? And what – if

anything – can we do to stop them and their fatal march into our countries, our homes, and our bodies? In *How to Survive a Pandemic*, Dr Michael Greger, physician and internationally-recognized expert on public health issues, delves into the origins of some of the deadliest pathogens the world has ever seen. Tracing their evolution from the past until today, Dr Greger spotlights emerging flu and coronaviruses as he examines where these pathogens originated, as

well as the underlying conditions and significant human role that have exacerbated their lethal influence to large, and even global, levels.

Essential reading for anyone who wants to be relevant in the workforce of tomorrow. Drawing on more than a decade of research on artificial intelligence and human systems, David L. Shrier,

a globally recognised futurist and innovation specialist, delivers fascinating insights and tips on how to win at work in the age of AI. Artificial intelligence is driving workforce disruption on a scale not seen since the Industrial Revolution. Automation was once associated with mass layoffs in heavy industry like auto and steel, but computers are getting smarter and are beginning to replace traditionally 'white collar' roles like law, consulting, banking and finance. Yet

some curious findings are emerging from the world's leading research labs. The combined intellect of people and machines working in harmony is able to achieve outcomes that are better than either can accomplish alone. Properly tuned AI systems can even help harness the power of the collective intelligence of an entire organisation or community to predict future events. This isn't science fiction; this is science fact the author personally helped discover. What are these

new hybrid AI+people systems? What can specialised AI systems do to help you succeed in your career? How can you work most effectively with these machines? Written by a practitioner who has worked with some of the largest companies in the world as well as some of the most innovative startups, *Augmenting Your Career* provides a rare window into a frontier area of computer science that will change everything about how you work and what your job will look like. Read this

book and fast track your evolution to the knowledge worker of the future.
