Current Practice, Issues and Empirical Analysis National Library Australia

This book investigates the legitimacy of the current Australian Financial Services Licensee-Authorised Representative (AFSL-AR) licensing model, as specified in the Commonwealth Corporations Act 2001. The book rectifies the deficiency in scholarly attention to this matter by developing a new conceptualised framework for the financial planning discipline. It takes into account theories in agency, legislation, legitimacy and the independent individual regulatory regimes in other professions; thereafter integrating this framework with the financial planning theory to examine the legitimacy, or what was found to be the illegitimacy of licensing advisers via multiple third party conflicted commercially oriented licensees. This book makes a very useful reference to understanding financial planning licencing model in Australia.

Conceptions of Professionalism National Library Australia Promises of indemnity are found in many kinds of commercial contracts, not just contracts of insurance. This book examines the nature and effect of contractual indemnities outside the insurance context. It is the first work to provide a detailed account of the subject in English law. The book presents a coherent theory of the promise of indemnity while also addressing important practical issues, such as the construction of contractual indemnities. The subject is approached from two perspectives. The foundations are laid by examining general principles applicable to indemnities in various forms. This covers the nature of indemnity promises; general principles of construction; the determination of scope; and the enforcement of indemnities. The approach then moves from the general to the specific, by examining separately particular forms of indemnity. Included among these are indemnities against liability to third parties, and indemnities against default or non-performance by third parties. The book states English law but it draws upon a considerable amount of material from other common law jurisdictions, including Australia, Canada, New Zealand and Singapore. It will appeal to readers from those countries.

It is argued that unintended consequences have a greater impact on the housing market and Australia's cities and their future than policies directly concerned with housing, urban policy and metropolitan strategic planning. The book will inform policy makers, including government officials, consultants and politicians. It will also be used by academics and students in various areas of urban policy, such as housing and urban planning, as well as environment, public policy and economics.

In Conceptions of Professionalism, Ken Bruce and Abdullahi Ahmed present the results of research into understanding what professionalism means to individuals who are CERTIFIED FINANCIAL PLANNERTM professionals and how they conceive of acting professionally. Financial planning is establishing itself as a relatively new, emerging profession and an understanding of how its members experience professionalism provides insights that will help those responsible across the international financial planning community to establish relevant, accurate and meaningful professional standards for financial planners. The authors employ the relatively new research methodology of phenomenography, which enables them to describe the qualitatively different ways in which people understand or experience a phenomenon. This particularly lends itself to the study of a concept such as professionalism. This study gives voice to the financial planners represented in the research and will inform standard setting bodies seeking to understand professionalism through the eyes of the professionals themselves. What the research reveals about the concept of professionalism itself will be of value to those whose interests lie beyond the world of financial planning, and the application of the methodology used in the study will inform researchers contemplating phenomenographical studies elsewhere.
