When a boy named Ico grows long curved horns overnight, his fate has been sealed—he is to be sacrificed in the Castle in the Mist. But in the castle, Ico meets a young girl named Yorda imprisoned in its halls. Alone they will die, but together Ico and Yorda might just be able to defy their destinies and escape the magic of the

Concise Guidebook for Financial and Legal Service Providers to the Emerging Crypto Asset Class "O'Reilly Media, Inc."
Surely you've heard of Bitcoin? Bitcoin was the first cryptocurrency and was used for

anonymous transactions on the web. Cryptocurrencies are best thought of as stocks or commodities - Bitcoin is gold. After Bitcoin there are 10 - 20 other coins that are blue-chip coins; these are coins with a large chunk of the crypto market, a dedicated following, and a real application. For example - Monero is a coin which focuses on absolute privacy. If you buy something or are paid for something online with Monero, it is impossible to trace the transaction. Monero is one of my favorite coins. These 10-20 blue-chip coins are the safest long-term investments as they are the least likely to tank. Then there are hundreds of other coins, the shitcoins - which usually start off with a value of almost nothing; we're talking values of a couple of hundred coins per US cent. The shitcoins are exciting too as if they become legit; they can increase in value rapidly by 10,000% or more. You can make a killing on shitcoins, but you can also lose your money so you need to be careful - more on that in a bit. If you landed on this, you might be already interested in investing in cryptocurrencies. Virtual or cryptocurrencies like Bitcoin and Ethereum are definitely by far the hottest

investment product currently available. This immutable and exchangeable cryptographic token promise to become hard and non-manipulatable money for the whole world.
