ESTE LIBRO presenta de manera articulada los aspectos teóricos, históricos y de política económica del comercio internacional, desde la perspectiva del caso colombiano. La obra se estructura en dos partes. En la primera, se plantean las teorías clásicas, neoclásicas, las «nuevas teorías» del comercio internacional, los desarrollos referidos a la geografía económica y el cambio tecnológico e incluye un capítulo sobre las visiones alternas que señala las limitaciones de la teoría dominante del comercio internacional. EN LA SEGUNDA parte, se hace un análisis histórico y del

marco institucional del comercio internacional desde el siglo XIX hasta la actualidad, para lo cual se introducen conceptos claves y algunos de los principales instrumentos relacionados con la política comercial del país; finaliza con la descripción de la canasta exportadora colombiana, los rasgos de diversificación y algunos casos de innovación industrial. EL TEXTO está elaborado como un manual de utilidad para profesores, estudiantes universitarios o cualquier persona interesada en entender los aspectos claves del comercio internacional y el papel que este ha jugado en la economía del país. La integralidad de los temas, su practicidad y la aplicabilidad al caso colombiano llenan un vacío en la literatura actual.

Globalisation has not led to the 'death of geography'. Intensified relations between communities in different parts of the world have only highlighted the need for understanding and managing phenomena on a variety of geographic scales. From global warming to credit crunch, and from epidemics to terrorism, causes and solutions are sought on local, regional, national as well as inter-continental levels. With the advent of Geospatial Technology, scholars, policymakers and

entrepreneurs have valuable tools in hand to proceed. This book offers the first systematic account of the science behind this mental and technological revolution. Tracing the adoption and dissemination of Geospatial Technology in a range of disciplines, it examines the impact this technology has had, and is likely to have, on the explanation of spatial behaviour, phenomena and processes. At the same time, stressing innovative usage, it explores scientific contributions to technology advancement.

Appleyard, Field, and Cobb's International Economics, 6th Edition is an International Economics textbook that offers a consistent level of analysis and treatment of the two main subdivisions of international economics-international trade theory and policy and international monetary theory and policy. Comprehensive and clear, the text helps students move beyond recognition toward an understanding of current and future international events. As with each prior edition, the authors provide current and timely information on the wide variety of international economic phenomena in the 6th Edition. New boxed items were added to cover emerging issues in the global economy.

Chapter material was updated to include recent developments in U.S. trade policy, major changes in the European Union, progress in the transition from command to market economies, and special issues related to developing nations. These improvements are designed to help readers both understand and appreciate the growing importance of the global economy in their lives.

This book explores the history of the Organization for Economic Co-operation and Development (OECD) and its place within capitalist development. Since 1948, the OECD and its forerunner, the Organization for European Economic Cooperation (OEEC) worked on almost every subject of interest to national governments ranging from economic growth to education (PISA rankings), statistics, to the environment. With varying success the OEEC/OECD thus played a key role as a warden of the West and of capitalist development. However, it has remained one of the least understood international organizations. Bringing together a number of case studies by scholars from around the world, this first source-based volume on the history of the OEEC/OECD in global governance offers not only a new understanding of the Organization's key areas of activities, but also its multiple relations to member states, other international organizations, and private networks. The volume thus critically re-examines postwar international history, most importantly decolonization and the Cold War, through the prism of one international organization in its various contexts.

New York Times Readers' Pick: Top 100 Books of the 21st Century New York Times Bestseller A Summer Reading Pick for President Barack Obama, Bill Gates, and Mark Zuckerberg From a renowned historian comes a groundbreaking narrative of humanity's creation and evolution—a #1 international bestseller—that explores the ways in which biology and history have defined us and enhanced our understanding of what it means to be “human.” One hundred thousand years ago, at least six different species of humans inhabited Earth. Yet today there is only one—homo sapiens. What happened to the others? And what may happen to us? Most books about the history of humanity pursue either a historical or a biological approach, but Dr. Yuval Noah Harari breaks the mold with this highly original book that begins about 70,000 years ago with the appearance of modern cognition. From examining the role evolving humans have played in the global ecosystem to charting the rise of empires, *Sapiens* integrates history and science to reconsider accepted narratives, connect past developments with contemporary concerns, and examine specific events within the context of larger ideas. Dr. Harari also compels us to look ahead, because over the last few decades humans have begun to bend laws of natural selection that have governed life for the past four billion years. We are acquiring the ability to design not only the world around us, but also ourselves. Where is this leading us, and what do we want to become? Featuring 27 photographs, 6 maps, and 25 illustrations/diagrams, this provocative and insightful work is sure to spark debate and is essential reading for aficionados of Jared Diamond, James Gleick, Matt Ridley, Robert Wright, and Sharon Moalem.

Winner of the Nobel Prize in Economics Get ready to change the way you think about economics. Nobel laureate Richard H. Thaler has spent his career studying the radical notion that the central agents in the economy are humans—predictable, error-prone individuals. Misbehaving is his arresting, frequently hilarious account of the struggle to bring an academic discipline back down to earth—and change the way we think about economics, ourselves, and our world. Traditional economics assumes rational actors. Early in his research, Thaler realized these Spock-like automatons were nothing like real people. Whether buying a clock radio, selling basketball tickets, or applying for a mortgage, we all succumb to biases and make decisions that deviate from the standards of rationality assumed by economists. In other words, we misbehave. More importantly, our misbehavior has serious consequences. Dismissed at first by economists as an amusing sideshow, the study of human miscalculations and their effects on markets now drives efforts to make better decisions in our lives, our businesses, and our governments. Coupling recent discoveries in human psychology with a practical understanding of incentives and market behavior, Thaler enlightens readers about how to make smarter decisions in an increasingly mystifying world. He reveals how behavioral economic analysis opens up new ways to look at everything from household finance to assigning faculty offices in a new building, to TV game shows, the NFL draft, and businesses like Uber. Laced with antic stories of Thaler's spirited battles with the bastions of traditional economic thinking, *Misbehaving* is a singular look into profound human foibles. When economics meets psychology, the implications for individuals, managers, and

policy makers are both profound and entertaining. Shortlisted for the Financial Times & McKinsey Business Book of the Year Award

"Nanna Verhoeff's new book is a must for anybody interested in visual culture and media theory. It offers a rich and stimulating theoretical account of the central dimension of our contemporary existence—interfacing and navigating both data and physical world through a variety of screens (game consoles, mobile phones, car interfaces, GPS devices, etc.). In the process of exploring these new screen practices, Verhoeff offers fresh perspectives on many of the key questions in media and new media studies as well as a number of new original theoretical concepts. As the first theoretical manual for the society of mobile screens, this book will become an essential reference for all future investigations of our mobile screen condition.—Lev Manovich."—Publisher's description.

International Economic Relations since 1945 Harvard University Press

This book brings together the work of more than 25 scholars from different parts of the world who analyze the challenges posed by the new coronavirus and how it can transform the lives of the cities. Through 19 chapters organized into three sections - experiences, responses and uncertainties - the authors offer a novel perspective about the resilience of the metropolis to face the most important sanitary crisis in the twenty-first century. History shows that cities can innovate and change profoundly in a response to disasters or after suffering an intense crisis, such as a pandemic or dramatic local spread of infectious diseases. In many cases, cities evolve to better urban systems, as literature based on the resilience perspective suggests. From this perspective, this book is a unique contribution to the academic discussion offering a multidisciplinary approach to analyze the impact of COVID-19 in the cities.

An Introduction to Austrian Economics Routledge

This book examines the integration of the international, global, and intercultural dimensions in contemporary education systems. Yemini provides a comprehensive understanding of the process of internationalization from different angles including policy-making, curriculum implementation, media discourse, and individual agency. The book illuminates and analyzes a set of key tensions of internationalization across multiple levels of schooling and across the domains of popular discourse, policy, curriculum, pedagogy, and students' identity, by connecting or re-connecting the process of internationalization and its outcomes at individual level of global citizenship. The author uses solid empirical embedding of each of those aspects together with development of novel theoretical insights in each of the investigated domains.

The COVID-19 pandemic has been a very strong reminder that the future economic development of any country is more than ever influenced by its ability to ramp-up digital competitiveness. Consequently, enterprises were pushed to assess and develop the possibilities offered by e-commerce and online marketing tools. In this book, experts outline the prerequisites for such online marketing competitiveness and compare the current level of digital marketing competitiveness in Europe by using publicly available macro and micro-level data. The authors present their analyses and recommendations including interviews with over 125 online marketers and e-commerce specialists and present the lessons from digitalization of over 600 SMEs.

Perspectives On Supplier Innovation: Theories, Concepts And Empirical Insights On Open Innovation And The Integration Of Suppliers IWA Publishing

Emerging in the throes of a global pandemic that threatens Europe's economies and food security, *International Labour Migration to Europe's Rural Regions* combines a diverse range of empirically rich, in-depth case studies, analysis of their rural context specificities, and insights from labour

market and migration theories, to critically examine the conditions and implications of rural labour migration. Despite its growing political, economic and social importance, our understanding of international labour migration to Europe's rural regions remains limited. This edited volume provides intricate descriptions of lived experience, critical theoretical analyses, analytical synthesis, and policy recommendations for this novel and developing phenomenon that has the potential to transform the lives of international migrants and local communities. The book's 25 authors represent a wide range of social science disciplines, with coverage of a vast range of Europe's rural regions, and diverse types of rural labour in areas such as horticulture, shepherding, wild berry picking and fish processing. The volume will be of interest to policy makers at local, regional, national and European levels, and scholars and students in a broad range of areas, including migration, labour markets, and rural studies. This book is available for free in PDF format as Open Access from the individual product page at www.routledge.com.

Given the pervasiveness of the informal sector and the lack of adequate universal safety nets, livelihoods of the poor depend heavily on their ability to access and accumulate assets, obtain decent returns on those assets, and use their asset base to manage risks. The papers in this volume discuss the strategies adopted by people to accumulate assets through migration, housing investments, natural resources management and informal businesses and consider how an asset-based social policy could enable those strategies or help them overcome the constraints of an unfavorable institutional environment.

Endogenous Innovation Ludwig von Mises Institute

Public spaces mirror the complexities of urban societies: as historic social bonds have weakened and cities have become collections of individuals public open spaces have also changed from being embedded in the social fabric of the city to being a part of more impersonal and fragmented urban

environments. Can making public spaces help overcome this fragmentation, where accessible spaces are created through inclusive processes? This book offers some answers to this question through analysing the process of urban design and development in international case studies, in which the changing character, level of accessibility, and the tensions of making public spaces are explored. The book uses a coherent theoretical outlook to investigate a series of case studies, crossing the cultural divides to examine the similarities and differences of public space in different urban contexts, and its critical analysis of the process of development, management and use of public space, with all its tensions and conflicts. While each case study investigates the specificities of a particular city, the book outlines some general themes in global urban processes. It shows how public spaces are a key theme in urban design and development everywhere, how they are appreciated and used by the people of these cities, but also being contested by and under pressure from different stakeholders.
