Social isolation and loneliness are serious yet underappreciated public health risks that affect a significant portion of the older adult population. Approximately one-quarter of community-dwelling Americans aged 65 and older are considered to be socially isolated, and a significant proportion of adults in the United States report feeling lonely. People who are 50 years of age or older are more likely to experience many of the risk factors that can cause or exacerbate social isolation or loneliness, such

as living alone, the loss of family or friends, chronic illness, and sensory impairments. Over a life course, social isolation and loneliness may be episodic or chronic, depending upon an individual's circumstances and perceptions. A substantial body of evidence demonstrates that social isolation presents a major risk for premature mortality, comparable to other risk factors such as high blood pressure, smoking, or obesity. As older adults are particularly high-volume and high-frequency users of the health care system, there is an opportunity for health care professionals to identify, prevent, and mitigate the adverse health impacts of social isolation and loneliness in older adults. *Social Isolation and Loneliness in Older Adults* summarizes the evidence base and explores how social isolation and loneliness affect health and quality of life in adults aged 50 and older, particularly among low income, underserved, and vulnerable populations. This report makes recommendations specifically for clinical settings of health care to identify those who suffer the resultant negative health impacts of social isolation and loneliness and target interventions to improve their social conditions. *Social Isolation and Loneliness in Older Adults* considers clinical tools and methodologies, better education and training for the health care workforce, and dissemination and implementation that will be important for translating research into practice, especially as the evidence base for effective interventions continues to flourish.

This book presents WHO guidelines for the protection of public health from risks due to a number of chemicals commonly present in indoor air. The substances considered in this review, i.e. benzene, carbon monoxide, formaldehyde, naphthalene, nitrogen dioxide, polycyclic aromatic hydrocarbons (especially benzo[a]pyrene), radon, trichloroethylene and tetrachloroethylene, have indoor sources, are known in respect of their hazardousness to health and are often found indoors in concentrations of health concern. The guidelines are targeted at public health professionals involved in preventing health risks of environmental exposures, as well as specialists and authorities involved in the design and use of buildings, indoor materials and products. They provide a scientific basis for legally enforceable

standards.

A free open access ebook is available upon publication. Learn more at www.luminosoa.org. Tens of thousands of Eritreans make perilous voyages across Africa and the Mediterranean Sea every year. Why do they risk their lives to reach European countries where so many more hardships await them? By visiting family homes in Eritrea and living with refugees in camps and urban peripheries across Ethiopia, Sudan, and Italy, Milena Belloni untangles the reasons behind one of the most under-researched refugee populations today. Balancing encounters with refugees and their families, smugglers, and visa officers, *The Big Gamble* contributes to ongoing debates about blurred boundaries between forced and voluntary migration, the complications of transnational marriages, the social matrix of smuggling, and the role of family expectations, emotions, and values in migrants' choices of destinations.

While both public opinion and scholars around the world are currently pointing out the danger of increasingly popular life-logging devices, this book articulates this debate by distinguishing between automatic and manual life-logging approaches. Since new definitions of life-logging have excluded the latter approach and have been mainly focused on effortless life-logging technologies such as Google Glass and Quantified Self applications in general, this book theoretically frames life-stowing. Through extensive etymological research, this book defines life-stowing as a manual and effortful practice conducted by life-stowers, individuals who devote their life to sampling reality in

predefined frameworks. Also as part of this book, an historical overview introduces life-stowers and distinguishes between Apollonian and Dionysian varieties of these practitioners. Lastly, in order to understand the future reception of lifestowing, particularly in relation to digital media, this book discloses the author's ongoing life-stowing project to a small audience. *Correlation of Physical Properties with Molecular Structure for Some Dicyclic Hydrocarbons Having High Thermal-energy Release Per Unit Volume--2-Alkylbiphenyl and the Two Isomeric 2-Alkybicyclohexyl Series* CarTech Inc

Now there's another way to get more horsepower: boring and stroking your Mopar small-block to get more cubic inches - up to 476 cubes! The small-block Mopar is one of the easiest engines in which to increase displacement without extensive modifications or specialized machine work - the engine was practically designed for more cubes! This book shows you how to get that big-cube power, and then it shows you how to optimize the small-block's other systems - induction, heads, valvetrain, ignition, exhaust, and more to make the most of the extra cubic inches. Author Jim Szilagyi is a Performance Specialist for Dodge Motorsports and Mopar Performance Parts. In this book he covers building big-inches from Mopar 318/340/360 -ci LA or Magnum 5.2-/5.9-liter engines, using both factory and aftermarket parts. If you want to make big power from your Mopar small-block, this is the book for you!

Many species of penicillium and aspergillus are important in biotechnology, food, medicine, biodeterioration and other applied fields, so a practical and stable taxonomy is of vital importance. Recent developments in science and technology mean that taxonomic classification is no longer confined to classical morphological concepts, and the integration of molecular, physiological and biochemical methods now plays an important role in understanding the classification of these fungi. Integration of Modern Taxonomic Methods for Penicillium and Aspergillus Classification brings together a collection of chapters from international experts in this field. It will be of value to researchers

and professionals in mycology, biotechnology, medicine and regulatory agencies interested in the identification of these fungi.

This is a remarkable account of the revolutionary impact of modern dance on European cultural life in the early twentieth century. Edward Ross Dickinson uncovers modern dance's place in the emerging 'mass' culture of the modern metropolis, sufficiently ubiquitous and high-profile to spark media storms, parliamentary debates, and exasperated denunciations even from progressive art critics. He shows how modern dance spoke in multiple registers - as religious and as scientific; as redemptively chaste and scandalously sensual; as elitist and popular. He reveals the connections between modern dance and changing gender relations and family dynamics, imperialism, racism, and cultural exchanges with the wider non-European world, and new conceptions of selfhood. Ultimately the book finds in these complex and often contradictory connections a new way of understanding the power of modernism and modernity and their capacity to revolutionize and transform the modern world in the momentous, creative, violent middle decades of the twentieth century.

The LA-series small-block Chrysler engine is a powerful, efficient, and quick-revving engine that has dutifully powered millions of

Chrysler/Dodge/Plymouth cars and trucks from 1964 to 2003. And it's also a power unit for many renowned Mopar muscle cars, including the Charger, Barracuda, Challenger, Dart, and others. The LA designates the small-block as "Lightweight A," which was a huge improvement over the previous A generation engine. With its compact size, 50-pound weight savings, thin-wall casting, and polyspherical heads, it cranked out a lot of torque and horsepower, which made it ideally suited for the street and a formidable opponent on the track. Although this venerable small-block has delivered impressive performance in stock trim, it can be easily modified to produce much greater power for almost any application. The LA was offered in 273-, 318-, 340- and 360-ci iterations, and a full range of aftermarket products are offered for these engines. Mopar engine expert and author Larry Shepard identifies the best parts and clearly guides you through the specific techniques to extract maximum performance from this platform. In particular, he delves into the heads, cams, and valvetrain products and modifications that will achieve your horsepower goals. In addition, he provides in-depth build-up instruction for other essential components: blocks, cranks, pistons, rods, ignition systems, intakes, carburetors, and exhaust. If you own an LA small-block-powered Mopar car or truck, this invaluable guidance and instruction will allow you to optimize performance and maintain reliability. Whether you're building an engine for street, street/strip, or racing, this vital information saves you save time, money, and delivers results. Add this to your Mopar library today!

Life-stowing from a Digital Media Perspective: Past, Present and Future Beard Books

Egyptology: The Missing Millennium brings together for the first time the disciplines of Egyptology and Islamic Studies, seeking to overturn the conventional opinion of Western scholars that Moslems/Arabs had no interest in pre-Islamic cultures. This book examines a neglected period of a thousand years in the history of Egyptology, from the Moslem annexation of Egypt in the seventh century CE until the Ottoman conquest in the 16th century. Concentrating on Moslem writers, as it is usually Islam which incurs blame for cutting Egyptians off from their ancient heritage, the author shows not only the existence of a large body of Arabic

sources on Ancient Egypt, but also their usefulness to Egyptology today. Using sources as diverse as the accounts of travelers and treasure hunters to books on alchemy, the author shows that the interest in ancient Egyptian scripts continued beyond classical writers, and describes attempts by medieval Arab scholars, mainly alchemists, to decipher the hieroglyph script. He further explores medieval Arab interest in Ancient Egypt, discussing the interpretations of the intact temples, as well as the Arab concept of Egyptian kingship and state administration—including a case study of Queen Cleopatra that shows how the Arabic romance of this queen differs significantly from Western views. This book will be of great interest to academics and students of archaeology, Islamic studies and Egyptology, as well as anyone with a general interest in Egyptian history.

Plants, as is now becoming widely recognised, exploit animals in almost as many ways as animals use plants; only rarely, however, do they eat animals in the sense of catching, holding, and devouring prey. The manner, however, in which they function as carnivores grants insights into plant form, function, and evolution not otherwise readily available. The diversity of morphological, biochemical, and commensal features generates both the lay and the scientific interest in this diverse group. The carnivorous plants exhibit features which are common to many other non-carnivorous plants. However the extent to which these features have developed and the combination of different features in small organs is unique and therefore, can be exploited by using these plants as models for scientific research.
