The Customer Is Never Right Routledge
 "This is a significant and often rather demanding collection of essays. It is an anthology putting together the uncollected works of an important twentieth-century philosopher. Many of the articles treat one or another of the more important issues considered by analytic philosophers during the last quarter-century. Of significant importance to philosophers interested in researching the many topics contained in *Logic Matters* is the inclusion in this anthology of a rather extensive eight-page name-topic index."--Thomist "The papers are arranged by topic: Historical Essays, Traditional Logic, Theory of Reference and Syntax, Intentionality, Quotation and

Semantics, Set Theory, Identity Theory, Assertion, Imperatives and Practical Reasoning, Logic in Metaphysics and Theology. The broad range of issues that have engaged Geach's complex and systematic reasoning is impressive. In addition to classical logic, topics in ethics, ontology, and even the logic of religious dogmas are tackled the work in this collection is more brilliant and ingenious than it is difficult and demanding."--Philosophy of Science "Geach displays his mastery of applying logical techniques and concepts to philosophical questions. Compared with most works in philosophical logic this book is remarkable for its range of topics. Plato, Aristotle, Aquinas, Russell, Wittgenstein, and Quine all figure prominently. Geach's style is remarkably lively considering the rightly argued matter. Although some of the

articles treat rather technical questions in mathematical logic, most are accessible to philosophers with modest backgrounds in logic." --Choice

 Don't fool yourself that the innocent never go to jail. When Bob Chappell disappeared from his yacht, moored in the Derwent Estuary near the Royal Yacht Club of Tasmania's marina, on the night of 26 January 2009, he left behind his pipe and tobacco — something that his partner of 18 years, Sue Neill-Fraser, knew he would never willingly do. What she didn't know was that despite no body, no weapon, no cause of death, and no witnesses, she would soon become the only suspect in Chappell's disappearance. In their haste to wrap up the case, the police charged Neill-Fraser with murder. In her eagerness to assist police, she virtually talked her way

into their hands. And after a lengthy trial that resulted in a guilty verdict, the judge delivered Neill-Fraser a crushing 26-year sentence. But was the verdict unsafe? Many of Australia's leading legal minds think so, and other reasonable hypotheses have been mooted about what might have happened on the Derwent that night. The Tasmanian government has changed its laws to give Neill-Fraser one last crack at proving her innocence, because that is what it's come to now — proving her innocence. The result of years of investigation, and based on extensive interviews with all the key players — including Sue Neill-Fraser and her family, local underworld figures, and legal luminaries — *Death on the Derwent* is a riveting story of justice not served.

This book covers all types of feline infectious diseases, including infections caused by viruses, bacteria, parasites and fungi. 199 clinical cases are presented randomly, as in practice, but the wide range of cases cover infectious diseases which affect all the organ systems of the cat. The illustrated clinical cases contain integrated questions a

This book is a comprehensive textbook for occupational therapy students and occupational therapists working in the field of mental health. It presents different theories and approaches, outlines the occupational therapy process, discusses the context of practice and describes a wide range of techniques used by occupational therapists. These include physical activity, cognitive approaches, group work, creative activities, play and life skills. The book covers all areas of practice in the field, including mental health promotion, acute psychiatry, community work, severe and enduring mental illness, working with older people, child and adolescent mental health, forensic occupational therapy, substance misuse and working with people on the margins of society. The theory chapters are written by occupational therapists who are recognised experts in their fields and the applied chapters are written by practitioners. An innovation in this edition is the inclusion of commentaries by service users on some of the chapters. This fourth edition has been extensively revised and updated. The new structure reflects changes in service delivery and includes sections on: philosophy and theory base the occupational therapy process ensuring quality the context of occupational therapy occupations client groups. Important new areas that are

covered include mental health promotion, evidence-based practice, community development and continuing professional development. Addresses the needs of the undergraduate course - covers all the student needs for this subject area in one volume. Links between theory and practice are reinforced throughout Written by a team of experienced OT teachers and practitioners Comprehensive - covers theory, skills and applications as well as management The clear structure with the division of chapters into six distinct sections makes it easy to learn and revise from as well as easy to refer to for quick reference in the clinical situation. Provides key reading and reference lists to encourage and facilitate more in-depth study on any aspect. It is written in a style that is easy to read and understand; yet there is enough depth to take students through to their final year of education. Chapters on the application of occupational therapy are written by practising clinicians, so they are up-to-date and realistic. For qualified occupational therapists, the book includes a review of current theories and approaches to practice, with references so that they can follow up topics of particular interest. Suitable for BSc and BSc (Hons) occupational therapy courses.

This collection of 24 papers aims to reconsider the nature and significance of the Irish Sea as an area of cultural interaction during the Neolithic period. The traditional character of work across this region has emphasised the existence of prehistoric contact, with sea routes criss-crossing between Ireland, the Isle of Man, Anglesey and the British mainland. A parallel course of investigation, however, has demonstrated that the British and Irish Neolithics were in many ways different, with distinct indigenous patterns of activity and social practices. The recent emphasis on regional studies has further produced evidence for parallel yet different processes of cultural change taking place throughout the British Isles as a whole. This volume brings together some of these regional perspectives and compares them across the Irish Sea area. The authors consider new ways to explain regional patterning in the use of material objects and relate them to past practices and social strategies. Were there practices that were shared across the Irish Sea area linking different styles of monuments and material culture, or were the media intrinsic to the message? The volume is based on papers presented at a conference held at the University of Manchester in 2002.

This is the first book to offer a comprehensive review of current research in the psychology of sports coaching. It provides detailed, critical appraisals of the key psychological concepts behind the practice of sports coaching and engages with contemporary debates in this field. Organised around three main themes, it discusses factors affecting the coaching environment; methods for enhancing coach performance; and how to put theory into practice through coaching work. Written by an international team of researchers and practitioners at the cutting edge of psychology and coaching, each chapter introduces a key concept, defines key terms, provides a comprehensive literature review, and considers implications for future research and applied practice. Encompassing the latest developments in the field, it addresses topics such as: the theory behind effective coaching creating performance environments promoting psychological well-being developing resilience through coaching transformational leadership and the role of the coach. *The Psychology of Sports Coaching: Research and Practice* is an indispensable resource for sport psychologists and sports coaches, and is essential reading for all students and academics researching sport psychology.

Our Nation's Finest Booktango
The Irish Neolithic has been dominated by the study of megalithic tombs, but the defining element of Irish settlement evidence is the rectangular timber Early Neolithic house, the numbers of which

have more than quadrupled in the last ten years. The substantial Early Neolithic timber house was a short-lived architectural phenomenon of as little as 90 years, perhaps like short-lived Early Neolithic long barrows and causewayed enclosures. This book explores the wealth of evidence for settlement and houses throughout the Irish Neolithic, in relation to Britain and continental Europe. More importantly it incorporates the wealth of new, and often unpublished, evidence from developer-led archaeological excavations and large grey-literature resources. The settlement evidence scattered across the landscape, and found as a result of developer-funded work, provides the social context for the more famous stone monuments that have traditionally shaped our views of the Neolithic in Ireland. It provides the first comprehensive review of the Neolithic settlement of Ireland, which enables a more holistic and meaningful understanding of the Irish Neolithic.

Kinase drug discovery remains an area of significant interest across academia and in the pharmaceutical industry. There are now around 13 FDA approved small molecule drugs which target kinases and many more compounds in various stages of clinical development. Although there have been a number of reviews/publications on kinase research, this book fills a gap in the literature by considering the current and future opportunities and challenges in targeting this important family of enzymes. The book is forward-looking and identifies a number of hot topics and key areas for kinase drug discovery over the coming years. It includes contributions from highly respected authors with a combined experience in the industry of well over 200 years, which has resulted in a book of great interest to the kinase field and across drug discovery more generally. Readers will gain a real insight into the huge challenges and opportunities which this target class has presented drug discovery scientists. The many chapters cover a wide breadth of topics, are well written and include high quality colour and black and white images. Topics covered include an outline of how medicinal chemistry has been able to specifically exploit this unique target class, along with reflections on the mechanisms of kinases inhibitors. Also covered is resistance to kinase inhibitors caused by amino acid mutations, case studies of kinase programs and reviews areas beyond protein kinases and beyond the human

kinome. Also described are modern approaches to finding kinase leads and the book finishes with a reflection of how kinase drug discovery may progress over the coming years.

Derek Bell's name became inextricably linked with that of Porsche during his long and hugely successful career as a racing driver. In this new 276-page book, Bell collaborates with renowned motorsport author Richard Heseltine to give the reader a very personal insight into his experiences racing for the legendary German marque. The approach taken by this latest publication from Porter Press International is to look at every race Bell drove for Porsche, in detail and with revealing comments from the book's subject. Light is cast on Bell's most prestigious victories with Porsche - four of his five in the Le Mans 24 Hours, three in the Daytona 24 Hours, two in the World Sportscar Championship - and many more besides. Bell describes the Porsches he raced, from the fearsome 917 to the iconic 956, 962, and 911. And he shares his thoughts on the now-legendary drivers he raced with, including six-time Le Mans winner Jacky Ickx, the famously flamboyant Hans Stuck, and two immense talents who lost their lives to the sport, Jo Siffert and Stefan Bellof. The overall effect is a fascinating trip back in time to a golden era for Porsche and sports car racing as a whole.

This book provides a systematic and comprehensive introduction to fusion neutronics, covering all key topics from the fundamental theories and methodologies, as well as a wide range of fusion system designs and experiments. It is the first-ever book focusing on the subject of fusion neutronics research. Compared with other nuclear devices such as fission reactors and accelerators, fusion systems are normally characterized by their complex geometry and nuclear physics, which entail new challenges for neutronics such as complicated modeling, deep penetration, low simulation efficiency, multi-physics coupling, etc. The book focuses on the neutronic characteristics of fusion systems and introduces a series of theories and methodologies that were developed to address the challenges of fusion neutronics. Further, it introduces readers to the unique principles and procedures of neutronics design, experimental methodologies and methodologies for fusion systems. The book not only highlights the latest advances and trends

in the field, but also draws on the experiences and skills collected in the author's more than 40 years of research. To make it more accessible and enhance its practical value, various representative examples are included to illustrate the application and efficiency of the methods, designs and experimental techniques discussed.

Lance Loud came to represent the gay community, and in addition, embodied the creative spirit and genius of outsider status that became the 1980s and fuelled so much of what has evolved today in our culture in terms of art, music and literature. In 2003, PBS broadcast the program, Lance Loud: A Death in an American Family, which was filmed in 2001 while visiting the family again, at the invitation of Lance before his death at age 50. As seen here, short as Lance's life was, it was a monumental one that continues to resonate to the present day.

Interviews are a frequent and important part of empirical research in political science, but graduate programs rarely offer discipline-specific training in selecting interviewees, conducting interviews, and using the data thus collected. Interview Research in Political Science addresses this vital need, offering hard-won advice for both graduate students and faculty members. The contributors to this book have worked in a variety of field locations and settings and have interviewed a wide array of informants, from government officials to members of rebel movements and victims of wartime violence, from lobbyists and corporate executives to workers and trade unionists. The authors encourage scholars from all subfields of political science to use interviews in their research, and they provide a set of lessons and tools for doing so. The book addresses how to construct a sample of interviewees; how to collect and report interview data; and how to address ethical considerations and the Institutional Review Board process. Other chapters discuss how to link interview-based evidence with causal claims; how to use proxy interviews or an interpreter to improve access; and how to structure interview questions. A useful appendix contains examples of consent documents,

semistructured interview prompts, and interview protocols.

Essentials of Sea Survival contains original scientific research and investigations from two internationally recognized experts on cold-water survival. In addition to having practical personal experience with cold water immersion, Frank Golden and Michael Tipton regularly lecture at various international conferences about water survival, and they are frequently called on for expert commentary on television and radio. The majority of books on this subject are personal survival accounts; few relate to scientific studies. This book is different: Using reader-friendly language, two leading environmental physiologists present the facts and dispel the myths of surviving a sea accident. The book, thanks to the real-life stories and easy-to-read format, will appeal primarily to the layperson who works or plays on or near the water. The text will also be of interest to an academic audience, who will appreciate the original research and up-to-date physiological and medical information. Essentials of Sea Survival is a compelling, informative, and comprehensive guide to open-water survival. Drawing from classic maritime disasters and personal accounts of near-miraculous survival, as well as carefully controlled laboratory experiments, it offers practical advice for avoiding as well as surviving a cold-water accident. It's an important reference for anyone associated with open-air aquatic

activities, such as members of the Coast Guard, Navy, and Marines; offshore oil rig employees; fishermen; divers; amateur and professional sailors; water safety instructors and life guards; water rescue personnel; boaters; water skiers; outdoor survival course instructors; and other recreational water sports enthusiasts.

As the number of older patients surge, so too will the medication management challenges pharmacists and other healthcare providers face with this population. Providing care for these often complex cases means not only staying on top of new medications and therapies, but

dealing with a wide range of other issues as well. Now in its second edition, Fundamentals of Geriatric Pharmacotherapy, by Lisa C. Hutchison and Rebecca B. Sleeper, offers the full support you need to provide the most effective medication management and therapeutic decisions. This text is unique, not only as a comprehensive overview of major issues in geriatric pharmacotherapy and a core textbook for students, but as a resource for all healthcare professionals who treat elderly patients. Covering all major topics and issues, the second edition provides the most current information and proven strategies in one comprehensive guide, including associated issues that impact therapy, such as the coordination of care across multiple venues and caregivers. Inside this edition, you will find: Summarized treatment guidelines Evidence-based reviews Recommendations for the frail elderly Case studies and clinical pearls Key points, terms, and definitions Self-assessment questions Extensively referenced New chapters on Palliative and Hospice Care and Infections and Antimicrobial Stewardship The demands of an aging population mean that a greater understanding of geriatric pharmacotherapy is now essential for all healthcare providers. Written by practicing geriatric specialists, Fundamentals of Geriatric Pharmacotherapy provides all the detailed information and practical guidance you need.
