 for free! The Earthquake Standards New Zealand An iso-seismal  
 map is used to determine the hazard for a particular location in  
 the seismic design standard that engineers use. To simplify the  
 design and construction of light timber-framed and smaller  
 concrete block masonry buildings in these regions, New Zealand's  
 construction standards divide the country into four earthquake  
 risk zones. Earthquake risk zones » Seismic Resilience The Building  
 Code. The Building Code is a key building control mechanism in  
 New Zealand and is contained in Schedule 1 of the Building  
 Regulations 1992 (all but Schedule 1 - The Building Code has  
 been revoked).. As a performance-based regulation, the Building  
 Code sets the performance standards that all building work must  
 meet. The Building Code » Seismic Resilience Sets out the criteria  
 for the seismic performance of engineering systems related to a  
 building's function. It covers the design, construction and  
 installation of seismic restraints for these engineering systems.  
 Buildings with importance level 5, large mass items, structures  
 external to the building, lifts, building contents, and fire sprinkler  
 systems are excluded from this Standard. Standards New Zealand  
 :: Seismic performance of ... New Zealand has had: (M1.5 or  
 greater) 0 earthquakes in the past 24 hours 1 earthquake in the  
 past 7 days; 5 earthquakes in the past 30 days; 84 earthquakes in  
 the past 365 days Today's Earthquakes in New Zealand Standards  
 New Zealand is a business unit within the Ministry of Business,  
 Innovation and Employment. We specialise in managing the  
 development of standards. We also publish and sell New Zealand,  
 joint Australia-New Zealand, and international  
 standards. Standards New Zealand earthquake, New Zealand  
 standards NZS 4203:1992 and NZS 3101:1995 require that ductile  
 structures be the subject of capacity design In the capacity design  
 of structures, elements of the primary lateral earthquake load  
 resisting systems are suitably designed and detailed The  
 Earthquake Standards New Zealand Provides procedures for the  
 determination of earthquake actions on structures in New  
 Zealand. It gives the requirements for verification procedures, site

hazard determination, the evaluation of structural characteristics,  
 structural analysis for earthquake action effects, the  
 determination and limits for deformations and the seismic design  
 of parts of structures. It is to be applied in ... Standards New  
 Zealand :: Structural design actions - Part ... Rather than  
 prescribing specific materials, designs or construction methods,  
 the 1992 New Zealand code outlines how a building must perform  
 to withstand the forces expected during an earthquake. This  
 allows builders to use innovative design and construction  
 methods to create earthquake-resistant buildings. Building for

 ... This is a list of large earthquakes that have occurred in New  
 Zealand. Only earthquakes with a magnitude of 6.0 or greater are  
 listed, except for a few that had a moderate impact. Aftershocks  
 are not included, unless they were of great significance or  
 contributed to a death toll, such as the M 6.3 2011 Christchurch  
 earthquake and the M 7.3 aftershock to the 1931 Hawke's Bay  
 earthquake . List of earthquakes in New Zealand - Wikipedia The  
 6.3-magnitude earthquake may have been an aftershock of the  
 7.1-magnitude 4 September 2010 Canterbury earthquake. New  
 Zealand's GNS Science has stated that the earthquake was part of  
 the aftershock sequence that has been occurring since the  
 September magnitude-7.1 quake, however a seismologist from  
 Geoscience Australia considers it a separate event given its  
 location on a separate fault system. 2011 Christchurch earthquake  
 - Wikipedia 10 years since the Darfield earthquake rocked New  
 Zealand: What have we learned? Kaikōura faultline study shakes  
 up earthquake science. 3 Oct 2019. New analysis of the 2016  
 Kaikōura quake could change the way scientists assess seismic  
 hazards, with one of the faults proving more unusual than first  
 thought. New Zealand to adopt 'world-leading' new natural  
 disaster ... The deadliest earthquake in New Zealand's history was  
 in 1931 in Napier and resulted in the deaths of 256 people. This  
 earthquake was very similar to the one in Christchurch. When you  
 compare the two quakes, however, whereas 1 in 100 people died  
 in Napier only 1 in 2000 died in Christchurch, and this is thanks  
 solely to the advancements in earthquake-proof architecture.
