Adult CCRN Exam Practice Questions are the simplest way to prepare for the CCRN test. Practice is an essential part of preparing for a test and improving a test taker's chance of success. The best way to practice taking a test is by going through lots of practice test questions. Taking lots of practice tests helps ensure that you are not surprised or disappointed on your test day. Our Adult CCRN Exam Practice Questions give you the opportunity to test your knowledge on a set of questions. You can know everything that is going to be covered on the test and it will not do you any good on test day if you have not had a chance to practice. Repetition is a key to success and using practice test questions allows you to reinforce your strengths and improve your weaknesses. Detailed answer explanations are also included for each question. It may sound obvious, but you have to know which questions you missed (and more importantly why you missed them) to be able to avoid making the same mistakes again when you take the real test. That's why our Adult CCRN Exam Practice Questions include answer keys with detailed answer explanations. These in-depth answer explanations will allow you to better understand any questions that were difficult for you or that you needed more help to understand.

Today's critical care nurse needs a variety of skills and the ability to work with very different types of patients. The Basic Critical Care Training Program is designed for any nurse who wishes to obtain the solid foundation of skills and knowledge needed to safely and effectively care for the critically ill patient. Nurses who are just beginning their careers, nurses currently working with critically ill patients, and nurses who wish to change their clinical emphasis and begin working in critical care units are excellent candidates for this program. This program allows you to study when you want to and to practice valuable critical thinking skills prior to taking care of patients. This 75-contact-hour program is accredited by the American Nurses Credentialing Center (ANCC) Commission on Accreditation and is designed to be coordinated with a well-designed preceptor/mentor training program in a critical care unit. The program is based on the textbook recommended! by the American Association of Critical Care Nurses: AACN Clinical Reference for Critical Care Nursing. That textbook is required for the course and must be purchased separately. The course consists of 28 modules, as follows: Cardiac (5 modules), Respiratory (6 modules), Neurological (5 modules), Gastrointestinal (3 modules), Hematology (2 modules), Endocrine (2 modules), Renal (2 modules), Special (3 modules). Each module consists of questions referring to material presented in the text. Upon completion of this course, you will be able to provide safe, entry-level critical care nursing practice as you begin working with a preceptor/mentor in a critical care unit. Completing the Basic Critical Care Training Program will distinguish you as a knowledgeable, skilled, and committed professional.

Medical simulation is a relatively new science that is achieving respectability among healthcare educators worldwide. Simulation and skills centres have become established to integrate simulation into mainstream education in all medical, nursing, and paramedical fields. Borrowing from the experience and methodologies of industries that are using simulation, medical educators are grappling with the problem of rapidly acquiring the skills and techniques required to implement simulation programmes into established curricula. This book assists both novice and experienced workers in the field to learn from established practitioners in medical simulation. Simulation has been used to enhance the educational experience in a diverse range of fields; therefore a wide variety of disciplines are represented. The book begins with a section on the logistics of establishing a simulation and skills centre and the inherent problems with funding, equipment, staffing and course development, and promotion. Section two deals with simulators and related training devices that are required to equip a stand-alone or institution-based centre. The features, strengths, and weaknesses of training devices are presented to help the reader find the appropriate simulator to fulfil their training requirements. There is a guide to producing scenarios and medical props that can enhance the training experience. The third section covers adult education and it reviews the steps required to develop courses that comply with 'best practice' in medical education. Teaching skills, facilitating problem-based learning groups and debriefing techniques are especially important to multidisciplinary skills centres that find themselves becoming a centre for medical education. The manual concludes with guides for the major specialties that use simulation, including military, paediatrics, CPR and medical response teams, obstetrics, and anesthesia.

**4th Edition** Elsevier Health Sciences

The third edition of the best-selling Critical Care Nursing offers readers a fully up-to-date, evidence-based guide to the science and practice of nursing the critically ill patient. Organised into 16 chapters, this edition covers all essential aspects of critical care nursing, from how to manage and monitor specific problems within organ systems, to how to provide sympathetic and compassionate care. A new chapter on 'Managing major incidents and preparing for pandemics' has been introduced with an insight to this crucial aspect of contemporary global healthcare. Written by a team of experienced nurses, this textbook supports staff working across the continuum of critical care to deliver safe, knowledgeable care that is rooted in a strong clinical, evidence base.
