Earth System Science in the Anthropocene Jones & Bartlett Publishers

This collection celebrates the work of Paulo Freire by assembling transnational perspectives on Freirean-based educational models that reconsider and reimagine language and literacy instruction, especially for multilingual learners. Offering an international and comparative overview of Freire's theories and critical pedagogies in relation to multilingualism, this volume presents innovative analyses and applications of theories and methods, and features case studies in public schools, after-school and community literacy programs, and grassroots activism. Part I features chapters that expand on Freire's concepts and ideas, including critical literacies, critical consciousness, and liberatory teaching principles. Part II features chapters that discuss empirical

analyses from applied research studies that draw from these philosophical concepts, making important connections to key topics on supporting students, curriculum development, and teaching. Ideal for students and scholars in language education, bilingual/multilingual methods, and sociology of education, the volume informs teacher knowledge and practice. In offering alternative to our dominant, homogenized monolingual status quo, the chapters present a shared vision of what multilingual literacy can offer students and how it can transform educational spaces into sites of imagination, creativity, and hope.

Exploring Earth Science by Reynolds/Johnson is an innovative textbook intended for an introductory college geology course, such as Earth Science. This ground-breaking, visually spectacular book was designed from cognitive and educational research on how students think, learn, and study. Nearly all information in the book is built around 2,600 photographs and stunning illustrations, rather than being in long blocks of text that are not articulated with figures. These annotated illustrations help students visualize geologic processes and concepts, and are suited to the way most instructors already teach. To alleviate cognitive load and help

students focus on one important geologic process or concept at a time, the book consists entirely of two-page spreads organized into 20 chapters. Each two-page spread is a self-contained block of information about a specific topic, emphasizing geologic concepts, processes, features, and approaches. These spreads help students learn and organize geologic knowledge in a new and exciting way. Inquiry is embedded throughout the book, modeling how scientists investigate problems. The title of each two-page spread and topic heading is a question intended to get readers to think about the topic and become interested and motivated to explore the two-page spread for answers. Each chapter is a learning cycle, which begins with a visually engaging two-page spread about a compelling geologic issue. Each chapter ends with an Investigation that challenges students with a problem associated with a virtual place. The world-class media, spectacular presentations, and assessments are all tightly articulated with the textbook. This book is designed to encourage students to observe, interpret, think critically, and engage in authentic inquiry, and is highly acclaimed by reviewers, instructors, and students.

**Once Upon an Earth Science Book** Pearson Higher Ed  
Rewriting the "origin stories" of the Anthropocene No geology is neutral, writes Kathryn Yusoff. Tracing the color line of the Anthropocene, *A Billion Black Anthropocenes or None* examines how the grammar of geology is foundational to establishing the extractive economies of subjective life and the earth under colonialism and slavery. Yusoff initiates a transdisciplinary conversation between feminist black theory, geography, and the earth sciences, addressing the politics of the Anthropocene within the context of race, materiality, deep time, and the afterlives of geology. *Forerunners* is a thought-in-process series of breakthrough digital works. Written between fresh ideas and finished books, *Forerunners* draws on scholarly work initiated in notable blogs, social media, conference plenaries, journal articles, and the synergy of academic exchange. This is gray literature publishing: where intense thinking, change, and speculation take place in scholarship.
