Meteorology -
Wikipedia Meteorology
Atmosphere And
Weather Meteorology is
the study of the
atmosphere,
atmospheric
phenomena, and
atmospheric effects on
our weather. The
atmosphere is the
gaseous layer of the
physical environment
that surrounds a
planet. Earth's
atmosphere is roughly
100 to 125 kilometers
(65-75 miles) thick.

Gravity keeps the
atmosphere from
expanding much
farther. Meteorology is
a subdiscipline of the
atmospheric sciences,
a term ... meteorology |
National Geographic
Society Weather, water
and climate events,
cause an average of
approximately 650
deaths and \$15 billion
in damage per year
and are responsible for
some 90 percent of all
presidentially-declared
disasters. About one-
third of the U.S.
economy - some \$3
trillion - is sensitive to
weather and
climate. Weather |

 JetStream: An online school for weather
 JetStream has comprehensive information on a variety of meteorology and atmospheric science topics, including severe weather phenomena, winds, precipitation, atmospheric circulation, upper air charts, global weather, synoptic weather, and smaller scale phenomena like thunderstorms, Doppler radar, satellites, and more.
 2020 Science Olympiad: Meteorology | National Oceanic and ...
 Meteorology is the study of the Earth's atmosphere and the variations in temperature and

moisture patterns that produce different weather conditions. Some of the major subjects of study are such phenomena as precipitation (rain and snow), thunderstorms, tornadoes, and hurricanes and typhoons.
 Meteorology | Scholastic
 Meteorology is the field of science that seeks to understand and predict short-term weather as well as long-term climate processes. Meteorology students study the atmosphere (the gases that surround the earth), focusing on the weather and how to forecast it.
