We live in a world
drowning in objects. But

what do they tell us about
ourselves? In *The
Language of Things*,
Deyan Sudjic charts our
relationship - both
innocent and knowing -
with all things designed.
From the opulent
excesses of the catwalk,
or the technical brilliance
of a laptop computer, to

the subtle refinement of a
desk lamp, he shows how
we can be manipulated
and seduced by our
possessions. Sudjic
delivers an exhilarating
insider's history of design
as he introduces us to the
world's most original
innovators and reveals
the hidden meanings in

their work. How did the design of a pistol influence a car? Why did a chair make a cafe the most fashionable place in Paris? What can we learn from a banknote, a police uniform or a typeface? And why can't any of us decide what size to wear our trousers? In an age when the word 'designer' has become synonymous with the cynical and manipulative, Sudjic examines the qualities behind successful design and explores the conflicting tensions between high art and

mass production. Brilliant and courageous, *The Language of Things* defines the visual vocabulary of our time and gives us a powerful new way of seeing the world.

Dogeaters Duke University Press
Contributes to the debate about the future of the city. London, New York, Tokyo and Los Angeles are the ultimate 100-mile cities, set apart by an economic supremacy derived chiefly from their sheer size. Today's cities are standardized,

monolithic, corporate urban sprawls - monuments to capitalism. *The Language of Things* Yale University Press
The author of *The Language of Things* "takes readers on an engrossing tour of Foster's life" from childhood to the world-renowned buildings he designed (Publishers Weekly, starred review). A leading pioneer of high-tech architecture, Norman Foster has worked across the globe, collaborating with luminaries such as R. Buckminster Fuller to

Steve Jobs. Born in Manchester, England, Foster grew up in poverty, the son of a machine painter. He served in the Royal Air Force and worked in a local architect's office before returning to school for architecture. Foster went on to design the Reichstag, the Hong Kong and Shanghai Banks headquarters in London and China, the new Wembley stadium and the British Museum's new court. He is also responsible for the design of Beijing's new airport,

the Rossiya tower in Moscow, one of the towers at Ground Zero in Manhattan, as well as numerous other buildings around the world. In this insightful biography, Deyan Sudjic charts Foster's remarkable life and career.

Seeing Like a State
Cambridge University Press

The Edifice Complex explores the intimate and inextricable relationship between power, money and architecture in the twentieth century. How and why have presidents,

prime ministers, mayors, millionaires and bishops come to share such a fascination with grand designs? From Blair to Mitterrand, from Hitler to Stalin to Saddam Hussein, architecture has become an end in itself, as well as a means to an end. This is a book of genuine timeliness, throwing new light on the motivations of the rich and powerful around the world - and on the ways they seek to affect us.

The Language of Things: Understanding the World of Desirable Objects

Penguin UK
 “An original, raw, and wild novel that has held its power and demands to be read.” —Viet Thanh Nguyen, Pulitzer Prize-winning author of *The Sympathizer* Finalist for the National Book Award for Fiction and Winner of the American Book Award
 A classic and influential story—often considered “the quintessential Filipino American novel” (*The Nation*)—centered on the cultural and political stakes of life in Marcos-era Philippines
 Welcome to Manila in the turbulent

period of the Philippines’ late dictator. It is a world in which American pop culture and local Filipino tradition mix flamboyantly, and gossip, storytelling, and extravagant behavior thrive. A wildly disparate group of characters—including movie stars and waiters, a young junkie and the richest man in the Philippines—becomes ensnared in a spiral of events culminating in a beauty pageant, a film festival, and an assassination. At the

center of this maelstrom is Rio, a feisty schoolgirl who will grow up to live in America and look back with longing on the land of her youth.
Future Systems New Directions Publishing
 The Manhattan skyline is one of the great wonders of the modern world. But how and why did it form? Much has been written about the city’s architecture and its general history, but little work has explored the economic forces that created the skyline. In *Building the Skyline*, Jason

Barr chronicles the economic history of the Manhattan skyline. In the process, he debunks some widely held misconceptions about the city's history. Starting with Manhattan's natural and geological history, Barr moves on to how these formations influenced early land use and the development of neighborhoods, including the dense tenement neighborhoods of Five Points and the Lower East Side, and how these early decisions eventually impacted the location of

skyscrapers built during the Skyscraper Revolution at the end of the 19th century. Barr then explores the economic history of skyscrapers and the skyline, investigating the reasons for their heights, frequencies, locations, and shapes. He discusses why skyscrapers emerged downtown and why they appeared three miles to the north in midtown-but not in between the two areas. Contrary to popular belief, this was not due to the depths of Manhattan's bedrock, nor the presence

of Grand Central Station. Rather, midtown's emergence was a response to the economic and demographic forces that were taking place north of 14th Street after the Civil War. Building the Skyline also presents the first rigorous investigation of the causes of the building boom during the Roaring Twenties. Contrary to conventional wisdom, the boom was largely a rational response to the economic growth of the nation and city. The last chapter investigates the value of

Manhattan Island and the relationship between skyscrapers and land prices. Finally, an Epilogue offers policy recommendations for a resilient and robust future skyline.

Brolliology Vintage

This book will represent one of the most effective and extravagant visions of architecture, one that links the new generations and the old world. In the past few years, Mexico has brought to light a new generation of architects whose extraordinary vision and productivity

has positioned the country among the most creative design cultures of the world. Under his own firm FR-EE, since 2000 Fernando Romero has designed and created a number of projects which represent a new vision of Mexican and world architecture. Romero's approach to architecture is innovative and an inspirational tool for empowering future generations. The volume will focus on three themes that intertwine throughout the content of the book. On-site photographs

(mainly aerial views) highlight the different places where FR-EE works, from urban centers to the desert. The location is what drives FR-EE's creative work, while the practice strives to investigate the dynamic forces of each site and client. Inspirational photographs give the reader a vision of how Romero's perspective shifts between different focuses of references, and reimagines them in new symbolic visions of the world (from monuments to colors, from natural

elements to animals). The images include renderings, photographs, diagrams, plans, and sections. The projects are presented in situ and through architectural drawings, so as to explain the projects' concepts and contents.

Building the Skyline

Verso

In this book, Brenda Longfellow examines one of the features of Roman Imperial cities, the monumental civic fountain. Built in cities throughout the Roman Empire during the first

through third centuries AD, these fountains were imposing in size, frequently adorned with grand sculptures, and often placed in highly trafficked areas. Over twenty-five of these urban complexes can be associated with emperors. Dr. Longfellow situates each of these examples within its urban environment and investigates the edifice as a product of an individual patron and a particular historical and geographical context. She also considers the role of

civic patronage in fostering a dialogue between imperial and provincial elites with the local urban environment. Tracing the development of the genre across the empire, she illuminates the motives and ideologies of imperial and local benefactors in Rome and the provinces and explores the complex interplay of imperial power, patronage, and the local urban environment.

Frank Lloyd Wright & Lewis Mumford Oxford University Press

If this were a novel, the

tales of astounding wealth, sexual perversion, murder, munificence, rape, insanity, brutality, slavery, religious mania, selfishness, snobbery, charity, suicide, generosity, theft, madness, wickedness, failure and eccentricity which unfold in these pages would be too concentrated to allow for the willing suspension of disbelief. All these sins and virtues, and more, are displayed by the characters in this book, some exhibiting several of them simultaneously.

Folly builders were not as we are. They never built what we now call follies. They built for beauty, utility, improvement; it is only we, struggling after them with our imperfect understanding, who dismiss their prodigious constructions as follies. Follies can be found around the world, but England is their spiritual home. Having written the definitive books on follies in Great Britain, Benelux and the USA, Headley & Meulenkamp have turned their attention to the folly builders themselves,

people so blinded by fashion or driven by some nameless ideology that they expended great fortunes on making their point in brick, stone and flint. Most follies are simply misunderstood buildings, and this book studies the motives, characters, decisions and delusions of their builders. If there was madness in their building, fortunately there was no method in it. *The Iconic Building* Rizzoli International Publications "A new type of achitecture has emerged in the last decade : the iconic

landmark building, which challenges the traditional architectural monument. In the past, public buildings expressed shared meaning through well-known conventions. Today those conventions are superceded by commercial forces and the quest for instant fame. Public architecture is now required to be an amazing piece of surreal sculpture as well as something that appeals to a diverse audience - at once provocative and practical yet without the context that religion and

ideaology once provided. Such contrary demands drive the architect toward a new convention : the enigmatic signifier. This curious sign suggests many meanings without naming of them. The most publized version of the genre, Frank Gehry's New Guggenheim Museum in Bilbao, 1997, became an instant media event that forces other architects to design event buildings routinely. This 'Bilbao effect' has led to a series of landmark buildings by architects such as Norman Foster, Peter

Eisenman, Enric Miralles, Zaha Hadid, Daniel Libeskind, Renzo Piano, Will Alsop, and Rem Koolhaas. Some of these buildings are successful creations, while others make us wince." -- book jacket.

A critically acclaimed book about commissioning used worldwide. Read and see reviews from the US, Canada, Australia and Denmark at www.CxGuideline.com. This book is written by an experienced

commissioning manager reviews activities and documents in the commissioning process from the start of the construction process through to the end, with practical examples. This guide shows how you can implement commissioning and gives you the tools you need to get started. It also ensures that you will be in compliance with ASHRAE's Standard 202 and ASHRAE Guideline 0-2019, as well as the Danish commissioning standard DS3090. It guides you with tips and

tricks to handle the challenges you'll face during the commissioning process - from the Owner's Project Requirements (OPR) to the test paradigms for system integration tests. Thomas Toftgaard Jarløv has multiple commissioning certifications: CxAP, CxM, and QCxP. He also runs www.CxWiki.dk, the Danish wiki on commissioning; and www.CxPlanner.com, which offers international commissioning software. *The Edifice Complex*

Ateneo University Press
A provocative look at architecture- "exceptionally intelligent and original" (Jonathan Yardley, *The Washington Post Book World*) Deyan Sudjic-"probably the most influential figure in architecture you've never heard of" - argues that architecture, far from being auteur art, must be understood as a naked expression of power. From the grandiose projects of Stalin and Hitler to the "theme park" excess of today's presidential libraries, Sudjic goes

behind the scenes of history's great manipulators of building propaganda-and exposes Rem Koolhaas, Frank Gehry, and other architects in a disturbing new light. This controversial book is essential reading for all those interested in the power of architecture-or the architecture of power.

The story of Boris

Iofan—designer of the iconic but unbuilt Palace of the Soviets—whose buildings came to define the language of Soviet architecture. What would an architect do for the chance to build the tallest building in the world? What would he sacrifice to stay alive in the midst of Stalin's murderous purges? This is the first major publication on the remarkable life and career of Boris Iofan (1891–1976), state architect to Joseph Stalin. Iofan's story is an insight into the troubled

relationship of all successful architects with power. A gifted designer and a committed Communist, Iofan became the Soviet Union's most celebrated architect after Alexei Rykov, Lenin's successor, persuaded him to return to Moscow from Rome with his aristocratic wife, Olga Sasso-Ruffo. Iofan was at the heart of political life in the Soviet Union and his work is key to understanding its official culture. When Stalin's henchmen crushed the architectural avant-garde, it was Iofan

who created the new national style, from the grand projects he realized—including the House on the Embankment, a megastructure of 505 homes for the Soviet elite—to even more ambitious unbuilt projects, in particular the Palace of the Soviets, a baroque Stalinist dream whose image was reproduced throughout the Soviet Union. His career took him to New York and Paris, and to the destroyed city of Stalingrad. He was a

friend of Frank Lloyd Wright; a rival of Le Corbusier, Walter Gropius, and Erich Mendelsohn; and an enemy of Hitler's architect Albert Speer, whose Nazi pavilion faced Iofan's Soviet one at the Paris Expo in 1937. He kept silent when Stalin executed his friends, including Rykov; he also sacrificed his own talent by following the dictator's instructions to the letter in creating the regime's landmarks. Generously illustrated, with a wide range of previously unpublished material, this

book is an exploration of architecture as an instrument of statecraft. It is an insight into the key moments of 20th-century politics and culture from a unique perspective, and the personal story of a remarkable individual who witnessed many of the most dramatic turning points of modern history. *Edifice Complex* MIT Press
An exploration of the intimate and inextricable relationship between architecture, power, money and politics in the twentieth century. How and why have presidents,

prime ministers, mayors, millionaires and bishops come to share such a fascination with architecture? Dr Tainter describes nearly two dozen cases of collapse and reviews more than 2000 years of explanations. He then develops a new and far-reaching theory.

The Image of the City

W. W. Norton & Company
Unwarranted optimism guided Jamaica's indigenous financial sector institutions. They converted cash to speculative investments. Driven more by egos than economics they built grand Head Offices- dubbed the 'edifice

complex' by one of Jamaica's most successful businessmen. Some of their activities skirted legal lines. The Courts adjudged others outright fraud. This general attitude and euphoric behaviours always precede crash. Jamaica Meltdown explores Jamaica's financial sector crisis of the 1990s and its aftermath. A fully emancipated, indigenous financial sector combined with and fuelling release of the people's creative energies could have produced true economic

development. Instead it was pushed into a tailspin and crashed. Rather than progress, retarded development ensued. The Jamaican economy and people now faced the tremendous cost of rebuilding confidence—paying down non-productive debt precisely when education, technology, and health initiatives for the intensified global economy warranted highest priority. Jamaica Meltdown is an earnest look at the history of this financial crisis from a

vantage point internal to the unfolding reality by an author with a strong grasp of finance theory.

buildings will not rot. Leaky buildings are the result of an unfortunate confluence of industrial, legislative, historical and cultural factors. Collectively, these elements stubbornly continue to defy a full and final resolution. Featuring personal stories of homeowners faced with insurmountable repair costs of hundreds of thousands to their 'dream home', often leading to sickness, depression and financial loss. And revealed for the first time, withheld Government

reports that estimate the total cost of leaky dwellings at \$47 Billion. Rottenomics is an engaging expose into a national crisis that refuses to go away.

Vanderbilt Melville House New York Times bestselling author and journalist Anderson Cooper teams with New York Times bestselling historian and novelist Katherine Howe to chronicle the rise and fall of a legendary American dynasty—his mother's family, the Vanderbilts.

One of the Washington Post's Notable Works of Nonfiction of 2021 When eleven-year-old Cornelius Vanderbilt began to work on his father's small boat ferrying supplies in New York Harbor at the beginning of the nineteenth century, no one could have imagined that one day he would, through ruthlessness, cunning, and a pathological desire for money, build two empires—one in shipping and another in railroads—that would make him the richest man

in America. His staggering fortune was fought over by his heirs after his death in 1877, sowing familial discord that would never fully heal. Though his son Billy doubled the money left by “the Commodore,” subsequent generations competed to find new and ever more extraordinary ways of spending it. By 2018, when the last Vanderbilt was forced out of The Breakers—the seventy-room summer estate in Newport, Rhode Island, that Cornelius’s grandson and namesake had

built—the family would have been unrecognizable to the tycoon who started it all. Now, the Commodore’s great-great-great-grandson Anderson Cooper, joins with historian Katherine Howe to explore the story of his legendary family and their outsized influence. Cooper and Howe breathe life into the ancestors who built the family’s empire, basked in the Commodore’s wealth, hosted lavish galas, and became synonymous with unfettered American capitalism and high

society. Moving from the hardscrabble wharves of old Manhattan to the lavish drawing rooms of Gilded Age Fifth Avenue, from the ornate summer palaces of Newport to the courts of Europe, and all the way to modern-day New York, Cooper and Howe wryly recount the triumphs and tragedies of an American dynasty unlike any other. Written with a unique insider’s viewpoint, this is a rollicking, quintessentially American history as remarkable as the family it so vividly captures.
