 This algorithm checks if the number is zero, in which case the number of bits set will be zero, and enters 'while' loop if it is not zero. Every time it enters the loop it will check if the right most digit is set or not by doing mod 2 (any number mod 2 returns 1 if the right most digit is one else returns 0).  Algorithm design refers to a method or a mathematical process for problem-solving and engineering algorithms. The design of algorithms is part of many solution theories of operation research, such as dynamic programming and divide-and-conquer. Techniques for designing and implementing algorithm designs are also called algorithm design patterns, with examples including the template method ... Algorithm - Wikipedia
