*Color Atlas of Diseases & Disorders of the Foal* is intended for any veterinarian who treats foals, either occasionally or on a routine basis, and serves as an invaluable source of practical clinical information. The illustrations cover all aspects of clinical presentation, diagnosis, treatments, and outcomes and provide a clear picture of what veterinarians should be looking for, perfect for timely intervention and more successful outcomes. Plus, two highly experienced editors share their expertise along with contributions from many well-known and highly respected veterinarians for the most comprehensive information available. Brief text and clear pictures demonstrate exactly what symptoms to look for, allowing for more timely intervention. The user-friendly content includes detailed descriptions of the most common disorders and brief descriptions of rare diseases. Answers common questions like: What is normal? How would I know if something is wrong? What does X-disease look like? High quality images and illustrations accurately depict each disease or disorder, allowing for a faster and more accurate diagnosis.  
*Clinical Procedures in Primary Eye Care E-Book* Butterworth-Heinemann  
The ability to see deeply affects how human beings perceive and interpret the world around them. For most people, eyesight is

part of everyday communication, social activities, educational and professional pursuits, the care of others, and the maintenance of personal health, independence, and mobility. Functioning eyes and vision system can reduce an adult's risk of chronic health conditions, death, falls and injuries, social isolation, depression, and other psychological problems. In children, properly maintained eye and vision health contributes to a child's social development, academic achievement, and better health across the lifespan. The public generally recognizes its reliance on sight and fears its loss, but emphasis on eye and vision health, in general, has not been integrated into daily life to the same extent as other health promotion activities, such as teeth brushing; hand washing; physical and mental exercise; and various injury prevention behaviors. A larger population health approach is needed to engage a wide range of stakeholders in coordinated efforts that can sustain the scope of behavior change. The shaping of socioeconomic environments can eventually lead to new social norms that promote eye and vision health. Making Eye Health a Population Health Imperative: Vision for Tomorrow proposes a new population-centered framework to guide action and coordination among various, and sometimes competing, stakeholders in pursuit of improved eye and vision health and health equity in the United States. Building on the momentum of previous public health efforts, this report also introduces a model for action that highlights different levels of prevention activities across a range of stakeholders and provides specific examples of how population health strategies can be translated into cohesive areas for action at federal, state, and local levels.
