Lakeland, the historical African American community of College Park, was formed around 1890 on the doorstep of the Maryland Agricultural

College, now the University of Maryland, in northern Prince George's County. Located less than 10 miles from Washington, D.C., the community began when the area was largely rural and overwhelmingly populated by European Americans. Lakeland is one of several small, African American communities along the U.S. Route 1 corridor between Washington, D.C., and Laurel, Maryland. With Lakeland's central geographic location and easy access

to train and trolley transportation, it became a natural gathering place for African American social and recreational activities, and it thrived until its self-contained uniqueness was undermined by the federal government's urban renewal program and by societal change. The story of Lakeland is the tale of a community that was established and flourished in a segregated society and developed its own institutions and traditions, including the area's only high school for

African Americans, built in 1928.

Microeconomics, Brief Edition comes from the same author team as the market-leading Principles of Microeconomics textbook. It continues to be innovative while teaching students in a clear, unbiased way. Like the 18th edition, Microeconomics, Brief Edition has 3 main goals: help the beginning student master the principles essential for understanding the economizing problem, specific economic issues, and the policy alternatives; help the

student understand and apply the economic perspective and reason accurately and objectively about economic matters; and promote a lasting student interest in economics and the economy. Although the Brie Editionf is a derivative of Microeconomics 18e, is not a cut-and-paste book that simply eliminates several chapters of Economics 18e and reorders and renumbers the retained content. Instead, Microeconomics, Brief Edition is a very

concise, highly integrated economics textbook that is distinct in purpose, style, and coverage from Microeconomics 18e.

From renowned educational psychologist, Robert Slavin, the Tenth Edition of this popular text translates theory into practices that teachers can use in their classrooms with deeper inquiry into the concept of intentionality and a

thorough integration of standards. This new edition highlights the most current issues and emerging trends in the field of educational psychology, while continuing to have in-depth, practical coverage with a focus on the intentional teacher. An intentional teacher, according to Slavin, is one who constantly reflects on his or her practice and makes instructional decisions based on a clear conception of how these practices affect students. To help readers become

intentional teachers, the author offers a set of questions to guide them and models best practices through classroom examples.

Apress Schiller's Essentials of Economics is the market leader for the one-semester survey course, praised for its strong policy focus and core theme of seeking the best possible answers to the basic questions of WHAT, HOW, and FOR WHOM to produce. The 9th edition

is benefitted by SmartBook, the first adaptive reading experience designed to engage students with the content in an active and dynamic way, as opposed to the passive and linear reading experience they are used to. As a result, students are more likely to master and retain important concepts in the survey course. As in previous editions, students are confronted early on with the reality that the economy doesn't always operate optimally, either at the macro or

micro level, and are encouraged to examine the policy challenge of finding the appropriate mix of market reliance and government regulation that generates the best possible outcomes. In addition to the suite of resources available within Connect Economics, over 100 key topics are reinforced with interesting and innovative videos on YouTube, provided to help non-majors see the relevance of economics. Connect is the only integrated learning system that

empowers students by continuously adapting to deliver precisely what they need, when they need it, and how they need it, so that your class time is more engaging and effective.

McConnell, Brue, and Flynn's Economics: Principles, Problems, and Policies is the #1 Principles of Economics textbook in the world. It continues to be innovative while teaching students in a clear, unbiased way. The 19th Edition builds upon the tradition of leadership by sticking to 3 main goals: Help the beginning student master the principles essential for understanding the economizing problem, specific economic issues, and the policy alternatives; help the

student understand and apply the economic perspective and reason accurately and objectively about economic matters; and promote a lasting student interest in economics and the economy. Understanding what and how students learn has emerged as a salient issue in Latin America, a region where the majority of children now have access to schools but few students learn the skills they need to succeed. 'Raising Student Learning in Latin America' examines recent advances in our understanding of the policies and programs that affect student learning and provides policy makers with effective options. This volume relies on

indicators from national and international assessments of subject matter knowledge plus intermediate learning indicators, such as dropout and completion rates. The first part focuses on the central role of student learning in education. The second part reviews the evidence on factors and policies that affect student learning. The final part addresses policy options on education quality assurance.

Why it is that success, deprivation or disadvantage are so often passed down intergenerationally? What part does education play? The educational achievement of parents is often reflected in that of their children and there are many underlying causes for such a relationship. Education and the Family argues that government policy has an important role to play in addressing this inequality even though

many of the causes lie within the home. Although each child should be supported to achieve his or her objectives, differences in the willingness or capabilities of families to take advantage of educational opportunities exacerbate social class differences and limit actual equality of opportunity for many. Understanding the causes of this transmission is key to tackling both social class inequality and to expanding the skill base of the economy. By providing an overview of

academic and policy thinking in relation to the role of the family, this book explores the educational success of children. It focuses on the education of the parents but also considers how the family - compared to wider, external influences such as schools - is a driver of differences in educational outcomes. It concludes with a consideration of what policy-makers are attempting to do about this key issue and why, and how this will impact on schools and teachers.

This book will interest researchers and academics in education and social policy, as well as teachers and other education and social policy practitioners.

 The English of Tourism is a collection of essays on the English specific to the Tourism Industry. The approach is a linguistic one: the different aspects of the English used in the field of tourism (tourism industry, types of tourism,

travel agencies, Internet sites of travel agencies, eco-tourism, travel) and in tourism-related fields (accommodation, advertising, entertainment, food services, hospitality, transportation) are analysed from a morphological (combination, derivation), syntactical (nominal phrases, verbal phrases), lexical and lexicographical, semantic (homonymy, semantic fields, synonymy, terminology), pragmatic (academic discourse,

idiom, metaphor), etymological (etymon, Latin heritage), and contrastive (Croatian–Romanian, English–Croatian, English–Romanian, French–English, Romanian–English) points of view. This book will appeal to people employed in industries including hotels, transportation, events, food and beverage, parks and recreation, as well as to professors, researchers, students, and translators from Croatian-, English-,

French-, and Romanian-speaking countries, active in their own countries or abroad. The types of academic readership it will appeal to include: academic teaching staff, researchers and students in the field of tourism, of tourism-related fields – accommodation, advertising, entertainment, food services, hospitality, and transportation – and of languages.

 "Although many millions of dollars are spent each year on introductory economics instruction in American colleges and universities, the return on this investment has been disturbingly low. Studies have shown, for example,

that several months after having taken a principles of economics course, former students are no better able to answer simple economics questions than others who never even took the course. Most students, it seems, leave our introductory courses without having learned even the most important basic economic principles"--

Technologies and Learning (IMCL2018), which was held in Hamilton, Canada on October 11 and 12, 2018. Today, interactive mobile technologies are at the core of many – if not all – fields of society. Not only does the younger generation of students expect a mobile working and learning environment, but also the new ideas, technologies and solutions coming out practically every day are further strengthening this trend. Since its inception in 2006, the conference

has been devoted to highlighting new approaches in interactive mobile technologies with a focus on learning. The IMCL conferences have since established themselves as a valuable forum for exchanging and discussing new research results and relevant trends, as well as practical experience and best-practice examples. This book contains papers in the fields of: Interactive Collaborative Mobile Learning Environments Mobile Health Care Training Game-based

Learning Design of Internet of Things (IoT) Devices and Applications Assessment and Quality in Mobile Learning. witnessed, both in the economy generally and in higher education in particular.
