Telecommunications Distribution Methods Manual Springer

From Rural Village to Global Village: Telecommunications for Development in the Information Age examines the role of information and communication technologies (ICTs) on both the macro level--societal, socio-economic, and governmental--and sector level--education, health, agriculture, entrepreneurship--emphasizing rural and developing regions. Author Heather E. Hudson examines the potential impact of ICTs by reviewing the existing research and adding her own findings from extensive fieldwork in ICT planning and evaluation. The volume includes case studies demonstrating innovative applications of ICTs plus chapters on evaluation strategies and appropriate technologies. She also analyzes the policy issues that must be addressed to facilitate affordable ICT access in rural and developing regions. This discussion relates to the larger "digital divide" issue, and the impact that access to communication technology--or the lack of it--has on communities and societies. This comprehensive volume is a valuable resource for scholars, professionals, researchers, and students in telecommunications law and policy, media economics, international communication, and communication and development fields. It is also suitable for use as an advanced-level text in these areas.

Neo-Hasidism applies the Hasidic masters' spiritual insights--of God's presence everywhere, of seeking the magnificent within the everyday, in doing all things with love and joy, uplifting all of life to become a vehicle of God's service--to contemporary Judaism, as practiced by men and women who do not live within the strictly bounded world of the Hasidic community. This first-ever anthology of Neo-Hasidic philosophy brings together the writings of its progenitors: five great twentieth-century European and American Jewish thinkers--Hillel Zeitlin, Martin Buber, Abraham Joshua Heschel, Shlomo Carlebach, and Zalman Schachter-Shalomi--plus a young Arthur Green. The thinkers reflect on the inner life of the individual and their dreams of creating a Neo-Hasidic spiritual community. The editors' introductions and notes analyze each thinker's contributions to Neo-Hasidic thought and influence on the movement. Zeitlin and Buber initiated a renewal of Hasidism for the modern world; Heschel's work is quietly infused with Neo-Hasidic thought; Carlebach and Schachter-Shalomi re-created Neo-Hasidism for American Jews in the 1960s; and Green is the first American-born Jewish thinker fully identified with the movement. Previously unpublished materials by Carlebach and Schachter-Shalomi include an interview with Schachter-Shalomi about his decision to

leave Chabad-Lubavitch and embark on his own Neo-Hasidic path.

With the invention of the laser it was possible to think about a fast and efficient way to make the information transmission, thus originating the first ideas of transmission through wave guides. This led to the invention of the optical fibers, for which scientific-technological research has been constantly developed in order to improve the efficiency of information transmission for different applications. Then, various techniques and materials used for the manufacture of optical fibers have been developed, which have been improved over the years, obtaining high efficiency in the transmission of information, as well as different types of optical fiber applications. This book intends to provide the reader a review of some different fiber optic applications as well as some ideas about the future of growing in this important technological area.

Welcome to the 11th International Conference on Telecommunications (ICT2004) hosted by the city of Fortaleza (Brazil). As with other ICT events in the past, this professional meeting continues to be highly competitive and very well perceived by the international networking community, attracting excellent contributions and active participation. This year, a total of 430 papers from 36 countries were submitted, from which 188 were accepted. Each paper was viewed by several members of the ICT2004 Technical Program Committee. We were very pleased to receive a large percentage of top-quality contributions.

The topics of submitted papers covered a wide spectrum from photonic techniques, signal processing, cellular networks, and wireless networks, to ad hoc networks. We believe the ICT2004 papers offer a wider range of solutions to key problems in telecommunications, and describe challenging avenues for industrial research and development. In addition to the conference regular sessions, seven tutorials and a workshop were organized. The tutorials focused on special topics dealing with next-generation networks. The workshop focused on particular problems and solutions in heavily distributed and shareable environments. We would like to thank the ICT 2004 Technical Program Committee members and referees. Without their support, the creation of such a broad conference program would not be possible. We also thank all the authors who made a particular effort to contribute to ICT2004. We truly believe that due to all these efforts the 2nd conference program consisted of top-quality contributions. We are also indebted to many individuals and organizations that made this conference possible. In particular, we would like to thank the members of the ICT2004 Organizing Committee for their help in all aspects of the organization of this professional meeting.

The Second International Conference on Forensic Applications and Techniques in Telecommunications, Information and Multimedia (e-Forensics 2009) took place in Adelaide, South Australia during January 19-21, 2009, at the Australian National Wine Centre, University of Adelaide. In addition to the peer-reviewed academic papers presented in this volume, the conference featured a significant number of plenary contributions from recognized national and international leaders in digital forensic investigation. Keynote speaker Andy Jones, head of security research at British Telecom, outlined the emerging challenges of investigation as new devices enter the market. These include the impact of solid-state memory, ultra-portable devices, and distributed storage – also known as cloud computing. The plenary session on Digital Forensics Practice included Troy O'Malley, Queensland Police Service, who outlined the paperless case file system now in use in Queensland, noting that efficiency and efficacy gains in using the system have now meant that police can arrive at a suspect's home before the suspect! Joseph Razik, representing Patrick Perrot of the Institut de Recherche Criminelle de la Gendarmerie Nationale, France, summarized research activities in speech, image, video and multimedia at the IRCGN. The plenary session on The Interaction Between Technology and Law brought a legal perspective to the technological challenges of digital forensic investigation.
