JENNINGS REGINA

Design in the Contemporary City Lund Humphries Publishers
This book offers a European perspective on spatial planning and welfare policies in relation to the new conditions derived from the current urban crisis. The book deals with research and policy

issues stemming from the fact that in the last ten years European cities have been affected by a structural crisis, not only financial but also a social, environmental and spatial, leading to an economic collapse. The crisis and its consequences due to political, financial and social conflicts contribute to increasing a city's complexity in terms of decrease of public finance, slowdowns in the real estate market, economic stagnation and the reduction of the consolidated welfare policies. In light of this, this book proposes to reframe European urban welfare towards a

“framework-rule” perspective. It is based on new rules and responsibilities as a path to change that would enable cities to respond to new circumstances through innovative actions thanks to co-production. The book focuses on the potential of this approach, identifying innovative perspectives for researchers, institutions and practitioners in the field of urban and regional planning. It also addresses the growth of civic initiatives all over Europe in which citizens and private business are engaged for the self-delivery of urban facilities, while jointly identifying issues and needs, and trying to solve problems with innovative and inclusive responses. This book will appeal to students and researchers along with a professional and policy audience due to the topical nature of the contents.

Emergent Urbanism Urban Planning & Design in Times of Structural and Systemic Change Routledge

Human Factors in Land Use Planning and Urban Design
Routledge

This new edition of "the best anthology in planning" includes 33 selections by many of the profession's most respected thinkers and eloquent writers. Returning editor Jay M. Stein chose the articles, about half of them new to this edition, based on suggestions from colleagues and students who used the first edition, recommendations from planning scholars, awards for writing in the field of planning, and his own review of recent planning literature. Classic Readings in Urban Planning offers an unparalleled depth of coverage and range of perspectives on traditional aspects of planning as well as on important

contemporary issues. This is an exceptional main or supplementary textbook for advanced undergraduate or beginning graduate level students in urban and regional planning. As a general overview of the field of urban planning, it is also an excellent choice for planning commissioners, practicing planners, and professionals in related fields such as environmental and land use law, architecture, and government. An abstract introduces each reading, and each section includes suggestions for additional readings suitable for more extensive study. Many of these are also "classics" that could not be included as a main selection.

Urban Planning & Design in Times of Structural and Systemic Change Routledge

In the last few decades, many European and American cities and towns experienced economic, social and spatial structural change. Strategies for urban regeneration include investments in infrastructures for production, consumption and communication, as well as marketing and branding measures, and urban design schemes. Bringing together leading academics from across a range of disciplines, including Douglas Kelbaugh, Ali Madanipour, Saskia Sassen, Gregory Ashworth, Nan Elin, Emily Talen, and many others, Emergent Urbanism identifies the specific issues dominating today's urban planning and urban design discourse, arguing that urban planning and design not only results from deliberate planning and design measures, but how these combine with infrastructure planning, and derive from economic, social and spatial processes of structural change. Combining explorations from urban planning, urban theory, human geography, sociology, urban design and architecture, the volume

provides a comprehensive and state-of-the-art overview, highlighting the complexities of these interactions in space and place, process and design.

Practice, Professionalism, and Expertise in the Making of the City
SAGE

The Oxford Handbook of Urban Planning is an authoritative volume on planning, a long-established professional social science discipline in the U.S. and throughout the world. Edited by Rachel Weber and Randall Crane, professors at two leading planning institutes in the United States, this handbook collects together over 45 noted field experts to discuss three key questions: Why plan? How and what do we plan? Who plans for whom? These three questions are then applied across three major topics in planning: States, Markets, and the Provision of Social Goods; The Methods and Substance of Planning; and Agency, Implementation, and Decision Making. Covering the key components of the discipline, this book is a comprehensive, discipline-defining text suited for students and seasoned planners alike.

Urban Form, Density and Sustainability Routledge

A detailed primer on urban design offers insight into how the form reflects an intersection of myriad forces from social and economic to cultural and aesthetic, in a lavishly illustrated account that discusses such topics as the challenge of limited resources and the issue of urban sprawl.

The Routledge Companion to Smart Cities Wolfram Media
Seemingly messy and chaotic, the landscapes and urban life of cities in Asia possess an order and hierarchy that often challenges understanding and appreciation. With contributions by

a cross-disciplinary group of authors, *Messy Urbanism: Understanding the “Other” Cities of Asia* examines a range of cases in Asia to explore the social and institutional politics of urban informality and the contexts in which this “messiness” emerges or is constructed. The book brings a distinct perspective to the broader patterns of informal urban orders and processes as well as their interplay with formalized systems and mechanisms. It also raises questions about the production of cities, cityscapes, and citizenship. *Messy Urbanism* will appeal to professionals, students, and scholars in the fields of urban studies, architecture, landscape architecture, planning and policy, as well as Asian studies. “The rubric of ‘messy urbanism’ is a productive antidote to the binaries that have limited a productive discussion about urbanism in Asia. This book is a significant contribution in understanding the inherent nature of the built environments in aspiring democracies—an emergent urbanism that seamlessly embraces the incremental, temporal, and ephemeral as given conditions in the formation of Asian cities.” —Rahul Mehrotra, Architect / Professor of Urban Design and Planning, Harvard University “This book is of a high quality, with multiple examples from Hong Kong and China. The authors have covered the topic admirably and I expect the book to attract a wide readership.” —Vinit Mukhija, Associate Professor and Vice Chair of Urban Planning, UCLA

New Metropolitan Perspectives Routledge

The integration of Human Factors in Land Use Planning and Urban Design (LUP & UD) is an exciting and emerging interdisciplinary field. This book offers practical guidance on a range of Human Factors methods that can be used to rigorously and reliably

explore LUP & UD. It provides new ways to interpret urban space and detail context sensitive analysis for the interpretation and design of our surroundings. The methodologies outlined allow for the consideration of the technical aspects of the built environment with the necessary experience and human centered approaches to our urban and regional settings. This book describes 30 Human Factors methods for use in the LUP & UD context. While it explores theory, it also focuses on the question of what Human Factors methods are; their advantages and disadvantages; step-by-step guidance on how to carry them out; and case studies to guide the reader. Describes the practice and processes associated with urban and regional strategic planning Constructed so that students, practitioners, and researchers with an interest in one particular area of Human Factors can read the chapters independently from one another

Power, Politics and Knowledge Beyond the Urban South
Routledge

The book promotes the use of formal methods in the creation of new explicit languages for problem solving in architecture and urbanism. Formal methods bring advantages to human actions and involve the use of theoretically driven techniques, expressed in languages stemmed from mathematics. Formalization seeks to guarantee that solutions for daily problems are produced in a manner that ensures their greatest possible adequacy and the least test time in direct confrontation with reality. This book contributes to the progress of formalization in architectural methodologies by finding points of convergence between state of the art research on ontologies in architecture, BIM/VDC, CAD/CAM, cellular automata, GIS, parametric processes,

processing and space syntax presented within the 3rd Symposium of Formal Methods in Architecture. The contents reach from millennial geometry to current shape grammars, engaging several formal approaches to architecture and urbanism, with different points of view, fields of application, grades of abstraction and formalization.

Classic Readings in Urban Planning Inter-American Development Bank

A collection of ethnographic case studies of urban planners and their practices Urban planners project the future of cities. As experts, they draft visions of places and times that do not yet exist, prescribing the tools to be used to achieve those visions. Their choices can determine how a city will merge its public transit and automobile traffic or how it will meet a demand for thousands of new dwelling units as quickly and with as little avoidable damage as possible. Life Among Urban Planners considers planning professionals in relation to the social contexts in which they operate: the planning office, the construction site, and even in the confrontations with those affected by their work. What roles do planners have in shaping the daily practices of urban life? How do they employ, manipulate, and alter their expertise to meet the demands asked of them? The essays in this volume emphasize planners' cultural values and personal assumptions and critically examine what their persistent commitment to thinking about the future means for the ways in which people live in the present and preserve the past. Life Among Urban Planners explores the practices and politics of professional city-making in a wide selection of geographical areas spanning five continents. Cases include but are not limited to

Bangkok, Bogotá, Chicago, Naimey, Rome, Siem Reap, Stockholm, and Warsaw. Examining the issues raised around questions of expertise, participation, and the tension between market and state forces, contributors demonstrate how certain planning practices accentuate their specific relationship to a place while others are represented to a global audience as potentially universal solutions. In presenting detailed and intimate portraits of the everyday lives of planners, the volume offers key insights into how the city interacts with the world. Contributors: Margaret Crawford, Adèle Esposito, Trevor Goldsmith, Mark Graham, Michael Herzfeld, James Holston, Gabriella Körling, Jennifer Mack, Andrew Newman, Lissa Nordin, Bruce O'Neill, Kevin Lewis O'Neill, Federico Pérez, Monika Szncl. *Growing Compact* Columbia University Press

An argument that operational urban planning can be improved by the application of the tools of urban economics to the design of regulations and infrastructure. Urban planning is a craft learned through practice. Planners make rapid decisions that have an immediate impact on the ground—the width of streets, the minimum size of land parcels, the heights of buildings. The language they use to describe their objectives is qualitative—“sustainable,” “livable,” “resilient”—often with no link to measurable outcomes. Urban economics, on the other hand, is a quantitative science, based on theories, models, and empirical evidence largely developed in academic settings. In this book, the eminent urban planner Alain Bertaud argues that applying the theories of urban economics to the practice of urban planning would greatly improve both the productivity of cities and the welfare of urban citizens. Bertaud explains that markets

provide the indispensable mechanism for cities' development. He cites the experience of cities without markets for land or labor in pre-reform China and Russia; this “urban planners' dream” created inefficiencies and waste. Drawing on five decades of urban planning experience in forty cities around the world, Bertaud links cities' productivity to the size of their labor markets; argues that the design of infrastructure and markets can complement each other; examines the spatial distribution of land prices and densities; stresses the importance of mobility and affordability; and critiques the land use regulations in a number of cities that aim at redesigning existing cities instead of just trying to alleviate clear negative externalities. Bertaud concludes by describing the new role that joint teams of urban planners and economists could play to improve the way cities are managed.

Divergent Trajectories of Global City Building University of Pennsylvania Press

This book examines the urban fabric of contemporary Tokyo as a valuable demonstration of permeable, inclusive, and adaptive urban patterns that required neither extensive master planning nor corporate urbanism to develop. These urban patterns are emergent: that is, they are the combined result of numerous modifications and appropriations of space by small agents interacting within a broader socio-economic ecosystem.

Together, they create a degree of urban intensity and liveliness that is the envy of the world's cities. This book examines five of these patterns that appear conspicuously throughout Tokyo: yokocho alleyways, multi-tenant zakkyo buildings, undertrack infills, low-rise dense neighborhoods, and the river-like ankyo streets. Unlike many of the discussions on Tokyo that emphasise

cultural uniqueness, this book aims at transcultural validity, with a focus on empirical analysis of the spatial and social conditions that allow these patterns to emerge. The authors of *Emergent Tokyo* acknowledge the distinct character of Tokyo without essentialising or fetishising it, offering visitors, architects, and urban policy practitioners an unparalleled understanding of Tokyo's urban landscape.

Emergent Urbanism Taylor & Francis

Experimenting with new ways of looking at the contexts, subjects, processes and multiple political stances that make up life at the margins, this book provides a novel source for a critical rethinking of marginalisation. Drawing on post-colonialism and critical assemblage thinking, the rich ethnographic works presented in the book trace the assemblage of marginality in multiple case-studies encompassing the Global North and South. These works are united by the approach developed in the book, characterised by the refusal of a priori definitions and by a post-human and grounded take on the assemblage of life. The result is a nuanced attention to the potential expressed by everyday articulations and a commitment to produce a processual, vitalist and non-normative cultural politics of the margins. The reader will find in this book unique challenges to accepted and authoritative thinking, and provides new insights into researching life at the margins.

Informality through Sustainability Springer

Urban design is a process of establishing a structural order within human settlements; responding to dynamic emergent meanings and functions in a constant state of flux. The planning/design process is complex due to the myriad of on-going (urban)

organizational and structural relationships and contexts. This book reconnects the process with outcomes on the ground, and puts thinking about design back at the heart of what planners do. Mixing accessible theory, practical examples, and carefully designed exercises in composition from simple to complex settings, *Urban Design* is an essential textbook for classrooms and design studios across the full spectrum of planning and urban studies fields. Filled with color illustrations and graphics of excellent projects, it gives students tools to enable them to sketch, draw, design, and above all, to think. This new edition remains focused on instructing the student, professional and layperson in the elements and principles of design composition so that they can diverge from conventional and packaged solutions in pursuit of a meaningful and creative urbanism. This edition builds upon established design principles and encourages the student in creative ways to depart from them as appropriate in dealing with the complexity of culture, space and time dynamics of cities. The book identifies the elements and principles of compositions and explores compositional order and structure as they relate to the meaning and functionality of cities. It discusses new directions and methods, and outlines the importance of both buildings and the open spaces between them.

Urbanism Springer Nature

Leon Krier is one of the best-known—and most provocative—architects and urban theoreticians in the world. Until now, however, his ideas have circulated mostly among a professional audience of architects, city planners, and academics. In *The Architecture of Community*, Krier has reconsidered and expanded writing from his 1998 book *Architecture: Choice or*

Fate. Here he refines and updates his thinking on the making of sustainable, humane, and attractive villages, towns, and cities. The book includes drawings, diagrams, and photographs of his built works, which have not been widely seen until now. With three new chapters, *The Architecture of Community* provides a contemporary road map for designing or completing today's fragmented communities. Illustrated throughout with Krier's original drawings, *The Architecture of Community* explains his theories on classical and vernacular urbanism and architecture, while providing practical design guidelines for creating livable towns. The book contains descriptions and images of the author's built and unbuilt projects, including the Krier House and Tower in Seaside, Florida, as well as the town of Poundbury in England. Commissioned by the Prince of Wales in 1988, Krier's design for Poundbury in Dorset has become a reference model for ecological planning and building that can meet contemporary needs.

Emergent Urbanism Rizzoli International Publications

Leading thinkers offer fresh insight into the workings of vibrant, ecological, equitable communities and their economies.

Designing Cities for the Future Routledge

Digital and Smart Cities presents an overview of how technologies shape our cities. There is a growing awareness in the fields of design and architecture of the need to address the way that technology affects the urban condition. This book aims to give an informative and definitive overview of the topic of digital and smart cities. It explores the topic from a range of different perspectives, both theoretical and historical, and through a range of case studies of digital cities around the world. The approach taken by the authors is to view the city as a

socially constructed set of activities, practices and organisations. This enables the discussion to open up a more holistic and citizen-centred understanding of how technology shapes urban change through the way it is imagined, used, implemented and developed in a societal context. By drawing together a range of currently quite disparate discussions, the aim is to enable the reader to take their own critical position within the topic. The book starts out with definitions and sets out the various interpretations and aspects of what constitutes and defines digital cities. The text then investigates and considers the range of factors that shape the characteristics of digital cities and draws together different disciplinary perspectives into a coherent discussion. The consideration of the different dimensions of the digital city is backed up with a series of relevant case studies of global city contexts in order to frame the discussion with real world examples.

The Oxford Handbook of Urban Planning Routledge

While designers possess the creative capabilities of shaping cities, their often-singular obsession with form and aesthetics actually reduces their effectiveness as they are at the mercy of more powerful generators of urban form. In response to this paradox, *Designing Urban Transformation* addresses the incredible potential of urban practice to radically change cities for the better. The book focuses on a powerful question, "What can urbanism be?" by arguing that the most significant transformations occur by fundamentally rethinking concepts, practices, and outcomes. Drawing inspiration from the philosophical movement known as Pragmatism, the book proposes three conceptual shifts for transformative urban

practice: (a) beyond material objects: city as flux, (b) beyond intentions: consequences of design, and (c) beyond practice: urbanism as creative political act. Pragmatism encourages us to consider how we can make deeper and more systemic changes and how urbanism itself can be a design strategy for such transformations. To illuminate how these conceptual shifts operate in vastly different contexts through analysis of transformative urban initiatives and projects in Belo Horizonte, Boston, Cairo, Karachi, Los Angeles, New Delhi, and Paris. The book is a rare integration of theory and practice that proposes essential ways of rethinking city-design-and-building processes, while drawing critical lessons from actual examples of such processes.

The Architecture of Community Springer

Circulation and Urbanization is a theorisation of 'the urban' and an interrogation of the questions: What is the relation between circulation and power? How can we understand the urban as a uniquely modern spatial order? What is the relationship between

circulation and urbanization? In what ways does the urban materialize and coordinate the political in its concrete spaces? What do the multiple uses of circulation throughout history tell us about the ways in which political spaces have been constituted? How is the urban historically produced through various more ancient spatial ontologies like the sea, the colonial settlement, empire and the network? What is the relation between territory, as a political technology, and urbanization? This book is part of the Society and Space series, which explores the fascinating relationship between the spatial and the social. These stimulating, provocative books draw on a range of theories to examine key cultural and political issues of our times, including technology, globalisation and migration.
