Currently, individuals interested in seeking an in-depth discussion of transplantation immunology must seek individual articles published in several journals, or extrapolate information from various non-transplant immunology textbooks. The purpose of this text is to provide the reader with a single source of information for the basic science of immunobiology of organ transplantation. It is unique that it focuses on immunobiology from the basic research side, with an emphasis on the cellular and molecular levels. The readers will be physicians, scientists, and graduate students interested and engaged in the study of immunology as it relates to allo- and xenotransplantation. This book is designed to be the reference standard for the immunobiology of transplantation.

Manual of Small Animal Emergency and Critical Care Medicine, Second Edition presents essential information on common emergencies in small animals using a concise, practical outline format. Offering a thorough update to this classic reference, the new edition provides new chapters on orthopedic injuries and wound management, significant revisions to the treatment protocols, and expanded toxicology information, as well as new references and drug information. The book retains its logical division into two parts, the first covering initial stabilization and the second offering a systems approach to specific conditions. As in the previous edition, chapters are extensively indexed and cross-referenced to facilitate ease of use in emergency situations. With many formulas, tables, drug dosages, and illustrations, Manual of Small Animal Emergency and Critical Care Medicine is an indispensable, convenient resource for busy emergency clinicians, whether they are new graduates or seasoned professionals.

Thesis (M.A.) from the year 2006 in the subject Computer Science - Miscellaneous, grade: 1,1, University of Heidelberg (Seminar für Computerlinguistik; Institut für allgemeine und angewandte Sprachwissenschaft), 64 entries in the bibliography, language: English, abstract: In these days our daily life is more and more affected by computers, chips, electronic equipment, et cetera. Owing to this increase of technology, even in common everyday objects, like for example a fridge, it is necessary to find a simple and intuitive way to interact with complex technology. Natural language dialog systems could be the solution, or at least a part of it, how humans and machines could communicate or interact with each other. With the help of dialog systems people could access information and technical functionality of computers in a natural way using linguistic in- and output. One of the main tasks of such dialog systems is to provide fast and appropriate answers to user's questions or requests. The challenge, therein, is how do we find these answers out of the flood of information.

If you are new to programming with Visual Basic .NET or upgrading from Visual Basic 6.0 and are looking for a solid introduction, this is the book for you. Developed by computer science instructors, books in the for the absolute beginner series teach the principles of programming through simple game creation. You will acquire the skills that you need for more practical Visual Basic .NET programming applications and will learn how these skills can be put to use in real world scenarios. Best of all, by the time you finish this book you will be able to apply the basic principles you've learned to the next programming language you tackle.

German writer E.T.A. Hoffmann is known as the master of uncanny and supernatural tales. In the novella The Devil's Elixir, Hoffmann recounts the creepy exploits of a monk who is driven to the brink of madness by a mysterious substance -- and a mysterious, possibly demonic figure who bears a striking resemblance to the monk himself.

Kissing Architecture The Floating Press

Kissing Architecture explores the mutual attraction between architecture and other forms of contemporary art. In this fresh, insightful, and beautifully illustrated book, renowned architectural critic and scholar Sylvia Lavin develops the concept of "kissing" to describe the growing intimacy between architecture and new types of art--particularly multimedia installations that take place

in and on the surfaces of buildings--and to capture the sensual charge that is being designed and built into architectural surfaces and interior spaces today. Initiating readers into the guilty pleasures of architecture that abandons the narrow focus on function, Lavin looks at recent work by Pipilotti Rist, Doug Aitken, the firm Diller Scofidio + Renfro, and others who choose instead to embrace the viewer in powerful affects and visual and sensory atmospheres. Kissing Architecture is the first book in a cutting-edge new series of short, focused arguments written by leading critics, historians, theorists, and practitioners from the world of urban development and contemporary architecture and design. These books are intended to spark vigorous debate. They stake out the positions that will help shape the architecture and urbanism of tomorrow. Addressing one of the most spectacular and significant developments in the current cultural scene, Kissing Architecture is an entertainingly irreverent and disarmingly incisive book that offers an entirely new way of seeing--and experiencing--architecture in the age after representation.

Courses in management research have traditionally focused on quantitative techniques, and no available text adequately covers the many different perspectives within the qualitative model or shows which qualitative techniques work best in different settings. "Crafting Qualitative Research" fills this need. In clear and readable prose, this comprehensive text offers a detailed guide to the rich diversity of qualitative research traditions, with examples and applications specifically designed for the field of management. Each of the book's four main sections includes a descriptive "tree" diagram that lays out the historical origins of that section's traditions. Each chapter is devoted to a specific methodology and includes historical origins and development; techniques and applications; current controversies and emerging issues; and a summary box highlighting that method's utility. With its detailed and easy-to-understand coverage, this will be the text of choice for any instructor who wants to include the qualitative approach in a research methods course, as well as a useful resource for anyone doing research in the post-positivist

traditions.

Law, Rights and Ideology in Russia: Landmarks in the destiny of a great power brings into sharp focus several key episodes in Russia's vividly ideological engagement with law and rights. Drawing on 30 years of experience of consultancy and teaching in many regions of Russia and on library research in Russian-language texts, Bill Bowring provides unique insights into people, events and ideas. The book starts with the surprising role of the Scottish Enlightenment in the origins of law as an academic discipline in Russia in the eighteenth century. The Great Reforms of Tsar Aleksandr II, abolishing serfdom in 1861 and introducing jury trial in 1864, are then examined and debated as genuine reforms or the response to a revolutionary situation. A new interpretation of the life and work of the Soviet legal theorist Yevgeniy Pashukanis leads to an analysis of the conflicted attitude of the USSR to international law and human rights, especially the right of peoples to self-determination. The complex history of autonomy in Tsarist and Soviet Russia is considered,

alongside the collapse of the USSR in 1991. An examination of Russia's plunge into the European human rights system under Yeltsin is followed by the history of the death penalty in Russia. Finally, the secrets of the ideology of 'sovereignty' in the Putin era and their impact on law and rights are revealed. Throughout, the constant theme is the centuries long hegemonic struggle between Westernisers and Slavophiles, against the backdrop of the Messianism that proclaimed Russia to be the Third Rome, was revived in the mission of Soviet Russia to change the world and which has echoes in contemporary Eurasianism and the ideology of sovereignty.

Inelastic Analysis of Solids and Structures presents in a unified manner the physical and theoretical background of inelastic material models and computational methods, and illustrates the behavior of the models in typical engineering conditions. The book describes experimental observations and principles of

mechanics, and efficient computational algorithms for stress calculations as typically performed in finite element analysis. The theoretical background is given to an extent necessary to describe the commonly employed material models in metal isotropic and orthotropic plasticity, thermoplasticity and viscoplasticity, and the plasticity of geological materials. The computational algorithms are developed in a unified manner with some detailed derivations of the algorithmic relations. Many solved examples are presented, which are designed to give insight into the material behavior in various engineering conditions, and to demonstrate the application of the computational algorithms.

Written as a technology guide for students, practitioners, and administrators, the focus of this book is on introducing current and future trends in library technology and automation within the larger context of strategic and systems planning, implementation, and continuous improvement. Technology is an essential resource for attaining both organizational and patron goals, and planning needs to emphasize the alignment between the clearly defined goals of each. For this alignment to occur on a consistent basis goals must be designed, or engineered, in a systematic fashion where technology fulfils the need to deliver the desired outcomes in an efficient, cost-effective manner. The concept of usability engineering is also examined, where the technology is planned, designed, and implemented in such a way as to maximize utility and ease-of-use for users and employees. Readers of this book will understand both the why and the how of library technology, planning, and implementation articulated in a simple, easy-to-understand fashion. Delivered from academic, public, and school library media perspectives Current and emerging technologies are discussed along with their current and future application in the field of library and information science Technology planning and integration is explained using a systems design process with scenarios and case studies that are articulated in a step-wise, holistic fashion
