Development of sheep and goat production BoD – Books on Demand

Sheep and goats have served poor people's most reliable livelihood resource since their domestication during Neolithic Revolution. Worldwide over 100 million people in arid areas, have only possible source of livelihood by grazing small ruminants. Grazing sheep and goats can improve soil and vegetation cover and plant and animal biodiversity. Sheep and goats thrive well in varied climatic conditions, get adapted easily to environment, require less care and management and are suitable for meat, milk, wool, skins and manure production. Mutton and Chohan is consumed throughout the country without involving any religious taboo. Together, the goat and sheep rearing households constitute 15 per cent of the total number of households in the country. The book contains a package of farm practices

encompassing housing, handling, feeding, health care, record keeping, fodder and manure management as well as project reporting for sheep and goats. This precise package of practices hopefully shall benefit all the farmers engaged in small ruminant farming as well as all those educated entrepreneurs that are willing to take livestock rearing as their career option. It will guide through all aspects of sheep and goat farm management. It is hoped that the book will help farmers in managing their livestock and teachers equally in imparting academic instructions to veterinary graduates.

*Sheep And Goat Handbook, Vol. 4* Sheep and Goat Production Ecology and distribution; Breeding; Reproduction; Maintenance and growth; Pregnancy; Lactation of suckling ewes and does; Nutritional diseases; Infectious diseases of sheep and goats; Internal parasites of sheep and goats; External parasites of sheep and goats; Growth and characteristics of wool and hair; Wiik grading and marketing; Livestock and meat marketing and grading; Carcase and meat qualities; Milk production in sheep

and goats; Systems, biological and economic efficiencies; Very extensive systems; Extensive grazing systems; Intensive grassland systems; Intensive arable systems; Very intensive systems; Government controlled systems; Migratory (Transhumance) systems; Nomadic systems; Village and smallholder systems; List of contributors.

**National Seminar : Papers and Abstracts** Elsevier Science Limited

Written for both livestock specialists and for development workers who have not been formally trained in animal production, this book explains the theory of goat-keeping using practical, step-by-step guidelines. It also takes into account the social, economic and organizational context in which the technology has to function.

*Sheep and Goat Production* Oxfam

The Sheep and Goat Handbook includes presentations made at the International Stockmen's School, January 8-13, 1984. The faculty members of the School who authored this fourth volume of the Handbook, along with books on beef cattle, dairy cattle, and horses, are scholars, stockmen, and agribusiness leaders with national and international reputations. The papers are a mixture of technology and practice that present new concepts from the latest research results of experiments in all parts of the world. Relevant information and concepts from many related disciplines are included.

*Characteristics and Strategies for Improvement* Longman Publishing Group

Proceedings of the final research co-ordination meeting on Improving Sheep and Goat Productivity with the Aid of Nuclear Techniques, Perth, Australia, 20-24 February 1989, reporting the results of a five year co-ordinated research programme. The main objectives of this programme were (a) to encourage research aimed at establishing the nutritional value of locally available feedstuffs and assessing strategies for supplementation, and (b) to examine the reproductive patterns of small ruminants in different environments, with particular emphasis on the seasonality of ovarian and testicular function, and the effects of nutrition and disease on reproductive efficiency.

*Future of the Sheep and Goats Dairy Sector* Daya Publishing House

Initially published by arrangement with INADES, Institut africain pour le développement économique et social, Abidjan, Côte d'Ivoire, the Better Farming Series booklets are designed as handbooks for intermediate-level agricultural education and training courses. They may be purchased as a set (45 booklets) or singly.

**Tropical Sheep and Goat Production** CABI

Goat science covers quite a wide range and varieties of topics, from genetics and breeding, via nutrition, production systems, reproduction, milk and meat production, animal health and parasitism, etc., up to the effects of goat products on human health. In this book, several parts of them are presented within 18 different chapters. Molecular genetics and genetic improvement of goats are the new approaches of goat development. Several factors affect the passage rate of digesta in goats, but for diet properties, goats are similar to other ruminants. Iodine deficiency in goats could be dangerous. Assisted reproduction techniques have similar importance in goats like in other ruminants. Milk and meat production traits of goats are almost equally important and have significant positive impacts on human health. Many factors affect the health of goats, heat stress being of increasing importance. Production systems could modify all of the abovementioned characteristics of goats.

*Tropics. Proceedings of the Final Research Co-ordination Meeting on Improving Sheep and Goat Productivity with the Aid of Nuclear Techniques* Org. by the Joint FAO. CRC Press

This book is focused on the challenges to implement sustainability in diverse contexts such as agribusiness, natural resource systems and new technologies. The experiences made by the researchers of the School of Agricultural, Forestry, Food and Environmental Science (SAFE) of the University of Basilicata offer a wide and multidisciplinary approach to the identification and testing of different solutions tailored to the economic, social and environmental characteristics of the region and the surrounding areas. Basilicata's productive system is mainly based on activities related to the agricultural sector and exploitation of natural resources but it has seen, in recent years, an industrial development driven by the discovery of oil fields. SAFE research took up the challenge posed by market competition to create value through the sustainable use of renewable and non-renewable resources of the territory. Moreover, due to its unique geographical position in the middle of the Mediterranean basin, Basilicata is an excellent "open sky" laboratory for testing sustainable solutions adaptable to other Mediterranean areas. This collection of multidisciplinary case studies and research experiences from SAFE researchers and their scientific partners is a stimulating contribution to the debate on the development of sustainable techniques, methods and applications for the Mediterranean regions.

*The Role of Sheep and Goats in Agricultural Development* Fao

Written by some of the world's leading goat meat scientists, and drawing from the most recent publications in the field, this book comprehensively covers the most important areas of goat meat production. Chapters discuss the role of genetics, breeding, reproduction, and nutrition in producing good quality, profitable goat meat. The mineral, amino acid and fatty acid composition of goat meat is also addressed, along with a discussion of its nutritive value, aimed at highlighting its health benefits over other red meats.

**Sheep Management for Meat Production in Iran** ILRI (aka ILCA and ILRAD)

The objectives of this study are to assess the role of small ruminants (sheep and goats) in the food production systems of developing countries, examine their advantages and disadvantages, analyze the constraints limiting their further contribution to the welfare of small farm/low income rural producers, prescribe measures for overcoming these constraints, and make recommendations related to potential donor involvement in support of the development of sheep and goat production. Small ruminants are viewed as an integral, but not dominant component of complex agricultural systems. Particular emphasis is placed on sheep and goats in mixed herds grazing dry rangelands and in small mixed farm systems in medium to high rainfall areas. An analysis of major constraints -- ecological, biological, policy, and socio-economic -- leads to recommendations on the need for a balanced production system approach for research, training and development programs, and for a combination of support activities such as herd health programs, and formulation of favorable credit, marketing and pricing policies for small ruminants and their products.
