 Evolution Behavior And Animal cognition

describes the mental capacities of non-human animals and the study of those capacities. The field developed from comparative psychology, including the study of animal conditioning and learning. It has also been strongly influenced by research in ethology, behavioral ecology, and evolutionary

psychology, and hence the alternative name cognitive ethology is sometimes used. Animal cognition - Wikipedia The philosophical issues that relate to research on animal cognition can be categorized into three groups: foundational issues about whether non-human animals are the proper subject of psychological

investigation; methodological issues about how to study animal minds; and more specific issues that arise from within the specific research programs.
