This book is a 'How to' book that can help medical doctors in career navigation into specialist training in Singapore. With the introduction of the Residency program comes a different set of application process, selection criteria and interview format. This book provides invaluable insight into the current Residency training structure and will help equip readers with strategies to prepare their CVs, giving them an edge over others in the Residency interview. Existing information on Residency Interview or the Selection Process is scattered. There is a huge deficiency in the current market on the subject of interview preparation as well as detailed choice of specialties based on the local climate. This book provides a step-by-step, practical, easy to understand guide to help readers select their medical specialties, prepare their CVs and excel in interviews.

The Institute of Medicine study Crossing the Quality Chasm (2001) recommended that an interdisciplinary summit be held to further reform of health professions education in order to enhance quality and patient safety. Health Professions Education: A Bridge to Quality is the follow up to that summit, held in June 2002, where 150 participants across disciplines and occupations developed ideas about how to integrate a core set of competencies into health professions education. These core competencies include patient-centered care, interdisciplinary teams, evidence-based practice, quality improvement, and informatics. This book recommends a mix of approaches to health education improvement, including those related to oversight processes, the training environment, research, public reporting, and leadership. Educators, administrators, and health professionals can use this book to help achieve an approach to education that better prepares clinicians to meet both the needs of patients and the requirements of a changing health care system.

Expecting to be inducted into the army, Joseph has given up his job and carefully prepared for his departure to the battlefield. When a series of mix-ups delays his induction, he finds himself facing a

year of idleness. Dangling Man is his journal, a wonderful account of his restless wanderings through Chicago's streets, his musings on the past, his psychological reaction to his inactivity while war rages around him, and his uneasy insights into the nature of freedom and choice.

*How to Prepare for Medical School Interviews* Harper Collins

From Alexandra Horowitz, #1 New York Times bestselling author of *Inside of a Dog*, an eye-opening, informative, and wholly entertaining examination and celebration of the human-canine relationship for the curious dog owner and science-lover alike. We keep dogs and are kept by them. We love dogs and (we assume) we are loved by them. We buy them sweaters, toys, shoes; we are concerned with their social lives, their food, and their health. The story of humans and dogs is thousands of years old but is far from understood. In *Our Dogs, Ourselves*, Alexandra Horowitz explores all aspects of this unique and complex interspecies pairing. As Horowitz considers the current culture of dogdom, she reveals the odd, surprising, and contradictory ways we live with dogs. We celebrate their individuality but breed them for sameness. Despite our deep emotional relationships with dogs, legally they are property to be bought, sold, abandoned, or euthanized as we wish. Even the way we speak to our dogs is at once perplexing and delightful. In thirteen thoughtful and charming chapters, *Our Dogs, Ourselves* affirms our profound affection for this most charismatic of animals—and opens our eyes to the companions at our sides as never before.

Surgical Education: Theorising an Emerging Domain delineates surgical (as opposed to medical)

education as a new and emerging field of academic enquiry. This reflects profound changes in healthcare training and practice on an international basis. As such, this book introduces, examines and explores the contribution of selected concepts and theories to surgical learning and practice. The first four chapters consider core facets of surgical education, such as simulation, while subsequent chapters take a key idea, often well known in another field, and examine its relevance to surgical education. Of course, performing invasive procedures is no longer the exclusive preserve of 'traditional' surgeons. Boundaries between surgery and the interventional specialties (radiology, cardiology, intensive care) are becoming increasingly blurred, especially as technology continues to expand. Changing work patterns and explosive technological development mark this out as a major growth area. New educational approaches (e.g. the use of simulation) are emerging. And all clinical practice is a team activity, where clinicians from many specialties (medicine, nursing, allied professions) come together with shared goals. For all the above groups, and their patients, education (teaching, training, learning and assessment) is of crucial importance. Yet the unique characteristics of surgical education have not previously been addressed from an educational perspective, nor have its possibilities as a new research domain been mapped. The domain needs to be theorised and its epistemological foundations established. There is thus both a need and a market for a definitive work in this area, aimed at surgeons, other clinicians, non-clinicians, educators, and others interested in this new domain.

This book provides a detailed guide to neonatal surgery and its related disciplines including: fetal medicine, fetal surgery, radiology, newborn anaesthesia, intensive care, neonatal medicine, medical genetics, pathology, cardiac surgery, and urology. The book aims to cover all the latest advances in newborn surgery, with contributions from the basic sciences and laboratory research to reflect the steady progress in our current working knowledge and understanding of many neonatal surgical disorders. As huge advances have been made in neonatal surgery in the past decades, ethical issues, long term outcomes, and quality of life are also emphasised. This book is an authoritative reference for surgical residents in training, consultant surgeons, general surgeons with an interest in paediatric surgery, neonatologists, paediatricians, intensive care specialists, and nursing staff.

ST3 interviews are extremely competitive and achieving the highest possible score is essential in securing the surgical training post of choice. The key to success in these interviews is through diligent preparation. This book outlines the structure and format of the ST3 general surgical interviews, with chapters dedicated to each component area that is assessed on the day. Written in an engaging style, it provides an essential resource for the interviews, with all of the required material in one book, a bonus for many readers with time constraints imposed by a demanding work schedule. It is aimed at instilling prospective surgeons with the tools and confidence needed to succeed at the ST3 general surgical interview. Success in these structured interviews will lead to the award of a 'national training number'.

Drug overdose, driven largely by overdose related to the use of opioids, is now the leading cause of unintentional injury death in the United States. The ongoing opioid crisis lies at the intersection of two public health challenges: reducing the burden of suffering from pain and containing the rising toll of the harms that can arise from the use of opioid medications. Chronic pain and opioid use disorder both represent complex human conditions affecting millions of Americans and causing untold disability and loss of function. In the context of the growing opioid problem, the U.S. Food and Drug Administration (FDA) launched an Opioids Action Plan in early 2016. As part of this plan, the FDA asked the National Academies of Sciences, Engineering, and Medicine to convene a committee to update the state of the science on pain research, care, and education and to identify actions the FDA and others can take to respond to the opioid epidemic, with a particular focus on informing FDA's development of a formal method for incorporating individual and societal considerations into its risk-benefit framework for opioid approval and monitoring.

Job search is and always has been an integral part of people's working lives. Whether one is brand new to the labor market or considered a mature, experienced worker, job seekers are regularly met with new challenges in a variety of organizational settings. Edited by Ute-Christine Klehe and Edwin A.J. van Hooft, The Oxford Handbook of Job Loss and Job Search provides readers with one of the first comprehensive overviews of the latest research and empirical knowledge in the areas of job loss and job search. Multidisciplinary in nature, Klehe, van Hooft, and their contributing authors offer fascinating insight into the diverse theoretical and methodological perspectives from which job loss and job search have been studied, such as psychology, sociology, labor studies, and economics. Discussing the antecedents and consequences of job loss, as well as outside circumstances that may necessitate a more rigorous job hunt, this Handbook presents in-depth and up-to-date knowledge on the methods and processes of this important time in one's life. Further, it examines the unique circumstances faced by different populations during their job search, such as those working job-to-job, the unemployed, mature job seekers, international job seekers, and temporary employed workers. Job loss and unemployment are among the worst stressors individuals can encounter during their lifetimes. As a result, this Handbook concludes with a discussion of the various types of interventions developed to aid the unemployed. Further, it offers readers important insights and identifies best practices for both scholars and practitioners working in the areas of job loss, unemployment, career transitions, outplacement, and job search.
