Applied Behavior Analysis Oxford University Press

This volume highlights the latest advances, innovations, and applications in bituminous materials and structures and asphalt pavement technology, as presented by leading international researchers and engineers at the RILEM International Symposium on Bituminous Materials (ISBM), held in Lyon, France on December 14-16, 2020. The symposium represents a joint effort of three RILEM Technical Committees from Cluster F: 264-RAP "Asphalt Pavement Recycling", 272-PIM "Phase and Interphase Behaviour of Bituminous Materials", and 278-CHA "Crack-Healing of Asphalt Pavement Materials". It covers a diverse range of topics concerning bituminous materials (bitumen, mastics, mixtures) and road, railway and airport pavement structures, including: recycling, phase and interphase behaviour, cracking and healing, modification and innovative materials, durability and environmental aspects, testing and modelling, multi-scale properties, surface characteristics, structure performance, modelling and design, non-destructive testing, back-analysis, and Life Cycle Assessment. The contributions, which were selected by means of a rigorous international peer-review process, present a wealth of exciting ideas that will open novel research directions and foster new multidisciplinary collaborations.

This volume is devoted to descriptions of non medical as well as medical uses for some drugs that have typically, or not so typically, been associated with drug abuse. One major objective of this book is to identify costs and benefits of drug abuse. The book highlights drugs including 3,4-methylenedioxymethamphetamine (MDMA), cannabinoids, opioids and methylphenidate because of their well-documented potential for abuse and provides new and emerging evidence of their potential to treat some chronic disease states alongside the potential consequences of exposure.

This title invites readers to discover the simple heuristics that people use to navigate the complexities and surprises of environments populated with others.

Journal of the Experimental Analysis of Behavior Jessica Kingsley Publishers

This book is part of a five-volume set that explores sustainability in textile industry practices globally. Case studies are provided that cover the theoretical and practical implications of sustainable textile issues, including environmental footprints of textile manufacturing, consumer behavior, eco-design in clothing and apparels, supply chain sustainability, the chemistry of textile manufacturing, waste management and textile economics. The set will be of interest to researchers, engineers, industrialists, R&D managers and students working in textile chemistry, economics, materials science, and sustainable consumption and production. This volume explores some alternative synthetic raw materials resulting from the recycling and regeneration of renewable textile fibers, and how these sustainable green-based composites can contribute to improved ecological and human health. The book offers insights into the impacts of human-made fibers and microfiber pollution, and how biodegradable material sourcing can help to curb harmful environmental impacts from these practices and achieve clothing and apparel sustainability.

Sarafino's goal in *Principles and Procedures for Modifying Behavior* is to create a clear and engaging instrument that describes ways to analyze one's own specific behaviors in terms of the factors that lead to and maintain them and ways to manage those factors to improve the behaviors. The text is based on research, theory, and experiences to explain and provide examples of the concepts and methods of self-management in a comprehensive text. It focuses on topics in applied behavior analysis, behavior modification, behavior therapy, and psychology of learning. Two general topics shaped this text: making the book relative to a variety of fields by describing applications in psychology, education, counseling, nursing, and physical therapy and different academic levels and preparation. Several important objectives guided the content and organization of the text which is designed to cover a large majority of tasks or concepts that the Behavior Analyst Certification Board (www.bacb.com) has identified as the field's essential content and should be mastered by all behavior analysts.

Rapid advances in sensors, computers, and algorithms continue to fuel dramatic improvements in intelligent robots. In addition, robot vehicles are starting to appear in a number of applications. For example, they have been installed in public settings to perform such tasks as delivering items in hospitals and cleaning floors in supermarkets; recently, two small robot vehicles were launched to explore Mars.This book presents the latest advances in the principal fields that contribute to robotics. It contains contributions written by leading experts addressing topics such as Path and Motion Planning, Navigation and Sensing, Vision and Object Recognition, Environment Modeling, and others.

Now available as a low priced paperback, this is an innovative, readable and engaging companion to the language of memory research. It consists of over 130 entries, bound within a coherent conceptual framework. Each entry starts with a definition, or a set of definitions, followed by in-depth and provocative discussion of the origin, meaning, usage and applicability of ideas and problems central to the neuroscience of memory and scientific culture at large. The entries, linked by webs of associations, can be read and enjoyed, and provide a versatile tool kit; a source for definitions, information and further reading; a trigger for contemplation, discussion and experimentation; and an aid to study, teaching and debate in classes and seminars. The text is supported by an extensive reference listing, and there is a comprehensive subject index, incorporating a much wider range of terms relevant to the field. Memory from A to Z provides a unique, highly valuable introduction to the field of memory for students and researchers approaching the subject for the first time, while at the same time serving and stimulating the more experienced.

Event-based systems are a class of reactive systems deployed in a wide spectrum of engineering disciplines including control, communication, signal processing, and electronic instrumentation. Activities in event-based systems are triggered in response to events usually representing a significant change of the state of controlled or monitored physical variables. Event-based systems adopt a model of calls for resources only if it is necessary, and therefore, they are characterized by efficient utilization of communication bandwidth, computation capability, and energy budget. Currently, the economical use of constrained technical resources is a critical issue in various application domains because many systems become increasingly networked, wireless, and spatially distributed. Event-Based Control and Signal Processing examines the event-based paradigm in control, communication, and signal processing, with a focus on implementation in networked sensor and control systems. Featuring 23 chapters contributed

by more than 60 leading researchers from around the world, this book covers: Methods of analysis and design of event-based control and signal processing Event-driven control and optimization of hybrid systems Decentralized event-triggered control Periodic event-triggered control Model-based event-triggered control and event-triggered generalized predictive control Event-based intermittent control in man and machine Event-based PID controllers Event-based state estimation Self-triggered and team-triggered control Event-triggered and time-triggered real-time architectures for embedded systems Event-based continuous-time signal acquisition and DSP Statistical event-based signal processing in distributed detection and estimation Asynchronous spike event coding technique with address event representation Event-based processing of non-stationary signals Event-based digital (FIR and IIR) filters Event-based local bandwidth estimation and signal reconstruction Event-Based Control and Signal Processing is the first extensive study on both event-based control and event-based signal processing, presenting scientific contributions at the cutting edge of modern science and engineering.

Authored by nationally recognized scholar and behavioral consultant Dr. John W. Maag, this book focuses primarily on students' observable behaviors and the environmental factors that affect their expression. As Maag points out, behavior management is probably one of the most misunderstood concepts in education. Written in a very accessible style, this book demystifies stereotypical beliefs and misconceptions regarding the use of reinforcement, punishment, and self-control. Maag offers clear, but detailed descriptions of proven intervention techniques, supplemented by a range of step-by-step guidelines, sample forms, charts, graphs, and illustrations that assist teachers in implementing the techniques. Although the techniques described in the book are based on a sound theoretical and empirical foundation, the author limits the use of technical jargon and infuses real-life examples and case studies that clarify and illuminate the presentation. How do mothers cope with child care and associated problems when, in adversity, they do not gain access to social service support? This book considers the important question of mothers' coping strategies when they are in adversity. Drawing upon the women's own accounts, it focuses not only on what they do themselves to deal with their problems, but how they integrate their own problem solving approaches with the use of supports. It also examines the way in which women cope with their own emotional responses to these problems. The women themselves, and their own accounts are placed 'centre stage' in this book. In doing this the book is able to create a major development in our understanding of the nature of Prevention, a central concept in welfare provision. Drawing upon Coping theory, and the findings of this study, this book extends and develops the concept of Prevention, creating a multidimensional model in which the actions of the mother herself (and other primary caregivers) are included alongside traditional domains. It will be of interest to a variety of academic and professional disciplines, including those interested in gender studies, sociology, social policy, as well as social work and health professionals.
