BRADSHAW KAIYA

Pakistan Exports

Greenwood

The report reviews the extremely diversified international market for canned small pelagic fish in three main sections.

Section one examines the species and products involved. Section two analyses the supply side of the market: world landings of small pelagic species, output of canned products and quantities entering international trade. Section three analyses the demand side of the market, emphasising national

markets which are foreseen as absorbing the increased exports anticipated in coming years. Three appendices tabulate data on landings, production potential and tariffs.
