REYNOLDS BEATRICE

Interfirm Linkages in a Developing Economy Irwin Professional Publishing
 Ideal for courses in International Marketing at the undergraduate and graduate levels. This marketing casebook demonstrates the diversity of marketing problems faced by organizations operating in Asia. The cases focus on industrial and consumer marketing issues and cover 16 countries.
College Ruled , Composition Book , Diary , Lined Journal Benchmark Education Company
 The book introduces a unique and innovative perspective for the study of international business networking. In contrast to the standard construction of models for optimal strategic decision-making, the essays in this book emphasise interpretation, learning by doing, trust and co-operation in the international business community. The editors focus upon business relationships within and between firms as well as the importance of middle management in the international arena.
Business Ventures in the Philippines and Asia CRC Press

Waste to Wealth proves that 'green' and 'growth' need not be binary alternatives. The book examines five new business models that provide circular growth from deploying sustainable resources to the sharing economy before setting out what business leaders need to do to implement the models successfully.

Many companies are relying on a business model that is fundamentally suited to a different era. Now, organizations are under pressure from new trends such as digitization and servitization. Trying to adapt to a new environment, they risk relying on improvements that only scratch the surface of developing a radically different value proposition. Based on rigorous research into companies that have successfully and radically redesigned their business models, **Radical Business Model Transformation** shows why they made the leap, what they had to do to achieve it and how it has transformed the potential for their organizations. This book is a step-by-step guide for leaders who want to seize the opportunity of new business models and gain a competitive advantage. It explains how to assess the status quo, identify the value of future business models and develop a transformation path. It also provides advice on how to involve both the leadership team and all other employees in order to implement successful business model transformation. Illustrative case studies of organizations that have crossed the line to a more transformative business range from exponential-growth companies like Netflix and global players like Xerox, SAP and Daimler to mid-sized hidden champions like Knorr-Bremse and LEGIC. **Radical Business Model Transformation** is essential reading for business leaders, transformation experts and MBA students interested in ensuring that their business model is future-proof and can withstand the new proliferation of innovations that are set to transform the business landscape.

Flexible Manufacturing Systems Springer Science & Business Media

Rock breakage with explosives has existed since the seventeenth century when black powder came into use in mining. Since then it has progressed from the invention of dynamite to the use of heavy ANFO. During the past two decades, there have been numerous technical contributions which have brought a better understanding of rock fragmentation with explosives, an improvement in drilling equipment and a noticeable evolution in the development of new explosives and blasting accessories. The Geomining Technological Institute of Spain (ITCE), aware of this progress and of the importance which the breakage process has acquired in mining and civil engineering projects, has ordered the publication of **Drilling and Blasting of Rocks**. The purpose of this Handbook is to give basic knowledge of the drilling systems, the types of available explosives and the accessories and the parameters that intervene in blast designing, whether controllable or not; at the same time the objectives and contents contribute to improved safety in mining. The Handbook is meant for all professionals who are involved with explosives in mining operations and civil engineering projects, as well as for students of technical schools.

A Report to the President by the Ministry of Energy Routledge

Presenting new technologies in underground coal extraction, with special attention to mine galleries support and maintenance, load mechanism of "massif-support system-safety system" systems, analysis of face equipment for thin coal seams mining and substantiation of rational stoping parameters. Advanced surface mining technologies of coal and ore are discussed in an original form, stability calculations of internal dumps and open-cut faces are presented, as well as examination of land surface subsidence using modern methods of calculation experiments. Special attention is given to the complex mining of mineral resources, such as: iron ore, coal deposits with drilling advance degassing wells, methane extraction from coal and anthropogenic deposits, heat receipt from mine water with help of thermal pumps. The unique geological conditions for mining in Poland and the Ukraine require a new technological approach for mining thin and very thin coal seams with thickness of 1 meter and less, using selective coal extraction methods, leaving rock behind in the mine. Relevant technological solutions are discussed in this volume. Further, technological process control during coal seams underground gasification is described together with pressure-temperature conditions of gas hydrates formation from gaseous mixtures of various content. Substantiation is also given to gas hydrates extraction technologies development and

21st century new pulse technologies of well drilling and a temperature mode of a rock-cutting tool and equipment with cryogenic-gravel filters is examined. Gas extraction processes located in flooded deposits with uniform and macroheterogeneous collectors are presented with the description of an effective methodology of two-subbench technology of ore deposits extraction.

Cost is considered a crucial factor in much decision-making in private and public organisations.

Therefore, the ability to calculate total estimated costs for different alternatives is important.

However, such total cost analysis is a challenging task. Providing students with the knowledge and skills needed for total cost analysis is therefore relevant in several disciplines within higher education. Within logistics management, total cost analysis is for decades by several scholars regarded as a 'cornerstone', a fundamental part of the discipline. However, except for describing the basic steps and presumptions, the literature does not give much support concerning how to conduct such analyses, or which the difficulties associated with total cost analysis are. This blank space in literature is not limited to the logistics discipline, it stretches throughout many disciplines. Neither does literature cover how to teach to support students' learning of total cost analysis.

Hence, to address the lack of research, the purpose of this thesis was formulated as follows: To

contribute to the understanding of conducting, learning, and teaching total cost analysis. Three

research questions were shaped to address each part of the purpose: conducting, learning and

teaching. RQ1 What challenges are connected to the process of conducting total cost analysis?

RQ2 What thresholds are there for learning how to conduct total cost analysis? RQ3 How can total

cost learning be supported by suitable educational methods? The research questions are

connected to each other in the sense that the challenges of conducting total cost analysis (RQ1)

indicate within which areas total cost learning is difficult, and thereby where thresholds are to be

investigated (RQ2). Further, knowledge about the learning thresholds is needed to discuss suitable

educational activities (RQ3). The research was conducted by a combination of literature reviews

and multiple case studies at four Higher Education Institutions, where both teachers and students

were approached. The findings for RQ1 were developed in an abductive procedure walking back

and forth between literature and cases. A twelve-step process for total cost analysis was defined,

and specific challenges associated for each of these steps. Regarding learning thresholds (RQ2),

perceived difficulties with learning total cost analysis were identified in the case studies. These

difficulties were then analysed against threshold characteristics available in literature. This

resulted in the identification of four total cost learning thresholds. Literature on constructivist-

based teaching was used to suggest teaching methods to support learning (RQ3). These types of

activities proved to match the ones most appreciated by teachers and students in the studied

cases. The twelve-step process provides a more structured and holistic view of total cost analysis

than previously available in the logistics literature. The description of challenges with conducting

total cost analysis is novel, not only within logistics, but also generally, why this is a major

contribution from this research. Aspects regarding teaching and learning connected to logistics,

and to total cost analysis, are very sparsely addressed in literature, which makes the findings concerning learning thresholds and teaching methods valuable. The findings are believed to be useful for different stakeholders. First and foremost, teachers can use the findings for designing programs, courses, and course modules which cover the important aspects of total cost analysis with help from educational activities supporting the students' learning. Second, for organisations where total cost analyses are conducted, the suggested process with its steps and associated challenges can be used to achieve better total cost analyses, and in turn more substantiated decisions. In the longer perspective, better education on total cost analysis at Higher Education Institutions will further strengthen the total cost competence in organisations, thereby improving the total cost-related decision making. Total cost analysis is not unique for the logistics discipline. Although focus in the study has been on Higher Education Institutions providing logistics courses, the findings are to a high extent believed to be relevant also for other disciplines dealing with total cost analysis.

Building Strategic Capabilities in Emerging Markets Springer Science & Business Media

My book is divided into twenty short poetic stories about a child's imagination. All the everyday normal days of a child are full of wonderful magic moments for him. His dog is green and walks across a log. His cat is going up a tree and coming down with a key. It's fun to hear a child tell about his imagined day. He talks excitedly about the ape he saw at the zoo. He knows it had a red cape. The sun shining on top of a mountain becomes a place to dream all day. The child sees planes, birds of every color, and soft feathery clouds that would fly up high. There's the apple tree that stole a kite. Where did it go? The kite was never seen again. The tree ate the kite. A child's imagination is a wonderful thing. By stories such as these, a child becomes aware of the magic in every day. It's waiting for him. I hope by reading this book, each child's imagination will be touched, and he will find his own magic moments that are waiting for him. I wish that a little child's

imagination would stay forever with him.
