Short case studies, based on real stories from the health care arena, ensure that each chapter of this book is rooted in descriptions of nursing practise that are grounded, salient narratives of nursing care. The reader is assisted to explore the ethical dimension of nursing practice: what it is and how it can be portrayed, discussed, and analysed within a variety of practice and theoretical contexts. One of the unique contributions of this book is to consider nursing not only in the context of the individual nurse - patient relationship but also as a social good that is of necessity limited, due to the ultimate limits on the nursing and health care resource. This book will help the reader consider what good nursing looks like, both within the context

of limitations on resources and under conditions of scarcity. Indeed, any discussion of ethical issues in nursing should be well grounded in a conceptualisation of nursing that nursing students and practising nursing can recognise, accept and engage with. Nursing, like medicine, social work and teaching has a clear moral aim – to do good. In the case of nursing to do good for the patient. However it is vital that in the pressurised, constrained health service of the 21st century, we help nurses explore what this might mean for nursing practice and what can reasonably be expected of the individual nurse in terms of good nursing care.

Written by a nurse and a philosopher, *Ethics in Nursing* blends the concrete detail of recurring problems in nursing practice with the perspectives, methods, and resources of philosophical ethics. It stresses the aspects of the nurses role and relations with others -- physicians, patients, administrators, other nurses -- that give ethical problems in nursing their special focus. Among the issues addressed are deception, parentalism, confidentiality, conscientious refusal, nurse autonomy, compromise, and personal responsibility for institutional and public policy. The third edition has been enlarged with new cases and case discussions related to AIDS and an additional chapter on the expanding scope of nursing ethics as it addresses issues related to scarce resources, cost containment, justice, and the possibilities of health care rationing.

Nursing Ethics: Holistic Caring Practice explores the moral practice of nursing, asserting that there is an inherent moral sense in nursing practice itself. This new edition of the book requires one to reconsider what it means to be a nurse. Rather than someone who merely applies ethical thinking and ethical models of decision making in nursing practice, the nurse is a moral being who is engaged in a moral practice.

Concepts and Cases in Nursing Ethics maps the ethical landscape of contemporary nursing. The book is the product of a collaboration between philosopher-ethicist Michael Yeo, nurse-ethicist Anne Moorhouse, and six representatives of various areas of professional nursing. It thus combines philosophical and ethical analysis with nursing knowledge and experience in a manner that is both understandable and relevant. The book is organized around six main concepts in nursing ethics: beneficence, autonomy, confidentiality, truth-telling, justice, and integrity. A chapter is devoted to the elucidation of each of these concepts. In each chapter, historical background and conceptual analysis are supplemented by case studies that exemplify issues and show how the concept applies in nursing practice. In this new edition, the materials in each chapter have been updated to reflect recent developments in nursing and more generally in health care. In addition, a totally new chapter on ethical theory has been added. Complete with bibliographies and study questions for further analysis of cases, this book is ideally suited for textbook use. It will help both practitioners and students to deal better with the clinical problems and issues that are encountered in the field. However, its simple prose and clear exposition of complex issues will make *Concepts and Cases in Nursing Ethics* attractive to anyone concerned about health care.

Code of Ethics for Nurses with Interpretive Statements World Health Organization

This book expands the current discussion on ethics, addressing the gap between "headline" ethics cases, which are often extreme and taken from a business context, and the everyday ethical challenges that we all face in school, work, relationships, and communities. Case studies throughout demonstrate concepts and provide opportunities for readers to apply theory as they consider everyday issues such as the temptation to lie about an arrest on a job application, peer pressure to steal or drink, and the implications of "ratting out" a classmate who is cheating or a co-worker who is stealing. By including a broad array of ethical challenges, this book makes ethics more accessible to the reader. Drawing from several academic disciplines, including social psychology and organizational behavior, this book explores the personal and environmental factors that influence our ethical decision-making. The book is appropriate for ethics courses in an array of disciplines as well as anyone interested in ethical challenges.

Case Studies in Health Care Ethics is an ideal primary or supplemental text for college students taking a bioethics course, and will be useful to anyone involved in the health care field: medical personnel and their patients, medical researchers and their subjects. The book consists of twenty-four case studies - real-life events that raised moral dilemmas for health care professionals - and explores ethical issues relating to obesity, the right of patients to refuse treatment, doctor-patient confidentiality, animal experiments, surrogate motherhood, faith healing, abortion, euthanasia, Obamacare, and many other topics. Each case study describes the events that took place, offers a critique via ethical theories such as utilitarianism and Kantian ethics, and ends with some questions for ethical reflection. The writing is thought-provoking, clear, and concise, and has a storytelling quality that readers will find engaging. Timothy Eves received his Ph.D. in Philosophy from the University of Connecticut in 1993 and is now an Associate Professor of Philosophy at the University of Bridgeport. He teaches a wide range of ethics courses, including Health Care Ethics.

Focusing on ethical challenges in program evaluation, this innovative book features six case-study scenarios that end at a point where the evaluator faces a significant decision about how to proceed. For each case, two distinguished evaluators offer insights on the best course of action to choose, and why. "What If?" boxes modify the details of the scenarios, inviting readers to reflect on whether these changes alter the ethical implications of the case. Six additional cases are presented with questions that guide readers to develop their own ethical analyses. The book is organized to follow the

progress of an evaluation, from the entry/contracting phase through the utilization of results.

How should we make decisions when we're uncertain about what we ought, morally, to do? Decision-making in the face of fundamental moral uncertainty is underexplored terrain: MacAskill, Bykvist, and Ord argue that there are distinctive norms by which it is governed, and which depend on the nature of one's moral beliefs.

Pharmacists face ethical choices constantly -- sometimes dramatic life-and-death decisions, but more often subtle, less conspicuous choices that are nonetheless important. Among the topics confronted are assisted suicide, conscientious refusal, pain management, equitable distribution of drug resources within institutions and managed care plans, confidentiality, and alternative and non-traditional therapies. Veatch and Haddad's book, first published in 1999, was the first collection of case studies based on the real experiences of practicing pharmacists, for use as a teaching tool for pharmacy students. The second edition accounts for the many changes in pharmacy since 1999, including assisted suicide in Oregon, the purchasing of less expensive drugs from Canada, and the influence of managed care on prescriptions. The presentation of some cases is shortened, most are revised and updated, and two new chapters have been added. The first new chapter presents a new model for analyzing cases, while the second focuses on the ethics of new drug distribution systems, for example hospitals where pharmacists are forced to choose drugs based on cost-effectiveness, and internet based pharmacies.
