Pessimism claims an impressive following--from Rousseau, Schopenhauer, and Nietzsche, to Freud, Camus, and Foucault. Yet "pessimist" remains a term of abuse--an accusation of a bad attitude--or the diagnosis of an unhappy psychological state. Pessimism is thought of as an exclusively negative stance that inevitably leads to resignation or despair. Even when pessimism looks like utter truth, we are told

that it makes the worst of a bad situation. Bad for the individual, worse for the species-- who would actually counsel pessimism? Joshua Foa Dienstag does. In *Pessimism*, he challenges the received wisdom about pessimism, arguing that there is an unrecognized yet coherent and vibrant pessimistic philosophical tradition. More than that, he argues that pessimistic thought may provide a critically needed alternative to the increasingly untenable progressivist ideas that have dominated thinking about politics throughout the modern period. Laying out powerful grounds for pessimism's claim that progress is not an enduring feature of human history,

Dienstag argues that political theory must begin from this predicament. He persuasively shows that pessimism has been--and can again be--an energizing and even liberating philosophy, an ethic of radical possibility and not just a criticism of faith. The goal--of both the pessimistic spirit and of this fascinating account of pessimism-- is not to depress us, but to edify us about our condition and to fortify us for life in a disordered and disenchanted universe.

This volume presents seven essays that survey fundamental argument realization issues within a typologically broad range of languages. The papers examine, within the architecture of Lexical-Functional

Grammar (LFG), the variety of ways in which arguments of a predicate may be realized in the syntax. LFG allows for the complex interactions of arguments, syntactic positions and grammatical functions. Regardless of the complexity or simplicity of the predicational structure of a clause, the papers included show how the relationship between arguments and their overt realization can be dealt with. The papers also treat multiple case marking in Australian languages, possessor alternation in Welsh, directional complex predicates in American Indian languages and causatives in Japanese. They discuss representational issues that encompass underspecification and

the encoding of semantic information needed to determine the correspondence of thematic arguments to their overt syntactic realization.

This book constitutes the refereed proceedings of the 20th International Conference on Applications of Natural Language to Information Systems, NLDB 2015, held in Passau, Germany, in June 2015. The 18 full papers, 15 short papers, 14 poster and demonstration papers presented were carefully reviewed and selected from 100 submissions. The papers cover the following topics: information extraction,

distributional semantics, querying and question answering systems, context-aware NLP, cognitive and semantic computing, sentiment and opinion analysis, information extraction and social media, NLP and usability, text classification and extraction, and posters and demonstrations.

Chambers Children's Illustrated

Dictionary "O'Reilly Media, Inc."

This book is about machine translation (MT) and the classic problems associated with this language technology. It examines the causes of these problems and, for linguistic, rule-based systems, attributes the cause to language's ambiguity and complexity and their interplay in logic-

driven processes. For non-linguistic, data-driven systems, the book attributes translation shortcomings to the very lack of linguistics. It then proposes a demonstrable way to relieve these drawbacks in the shape of a working translation model (Logos Model) that has taken its inspiration from key assumptions about psycholinguistic and neurolinguistic function. The book suggests that this brain-based mechanism is effective precisely because it bridges both linguistically driven and data-driven methodologies. It shows how simulation of this cerebral mechanism has freed this one MT model from the all-important,

classic problem of complexity when coping with the ambiguities of language. Logos Model accomplishes this by a data-driven process that does not sacrifice linguistic knowledge, but that, like the brain, integrates linguistics within a data-driven process. As a consequence, the book suggests that the brain-like mechanism embedded in this model has the potential to contribute to further advances in machine translation in all its technological instantiations.

The use of printed words to capture language is one of the most remarkable inventions of

humankind, and learning to read them is one of the most remarkable achievements of individuals. In recent decades, how we learn to read and understand printed text has been studied intensely in genetics, education, psychology, and cognitive science, and both the volume of research papers and breadth of the topics they examine have increased exponentially. Theories of Reading Development collects within a single volume state-of-the-art descriptions of important theories of reading development and disabilities. The included chapters focus on multiple aspects of reading development and are written by leading

experts in the field. Each chapter is an independent theoretical review of the topic to which the authors have made a significant contribution and can be enjoyed on its own, or in relation to others in the book. The volume is written for professionals, graduate students, and researchers in education, psychology, and cognitive neuroscience. It can be used either as a core or as a supplementary text in senior undergraduate and graduate education and psychology courses focusing on

reading development.

This dictionary forms part of the project Indo-European Etymological Dictionary, which was initiated by Robert Beekes and Alexander Lubotsky in 1991. The aim of the project is to compile a new and comprehensive etymological dictionary of the inherited vocabulary attested in the Indo-European languages, replacing the now outdated dictionary of Pokorny (1959).
