The Improved Performance Research Integration Tool (IMPRINT) was developed by Alion Science and Technology for the Army Research Laboratory (ARL) Human Research and Engineering Directorate (HRED). This manual describes the professional version of IMPRINT, named IMPRINT Pro. IMPRINT Pro is government owned and consists of a set of automated aids to assist analysts in conducting human performance analyses. IMPRINT Pro provides the means for estimating manpower, personnel, and training (MPT) requirements and constraints for new weapon systems very early in the acquisition process. By allowing the incorporation of robust task analyses and associated data into a dynamic simulation environment, IMPRINT enables analysts to quantitatively predict the impact of human systems integration (HSI) variables (manpower, personnel, training, and human factors based interface design) against total system performance.

A short chapter on tree-based methods puts forth the main application areas succinctly. The chapter on data mining is a good introduction to the most common machine learning algorithms. The last chapter highlights the role of different time series models in analytics.
