Music has always been esteemed for its power to speak directly to our higher consciousness, a power founded in the purity of simple harmonic ratios. In this book, Alain Danielou traces the development of musical scales and tuning from their origins in both China and India, through their merging in ancient Greece, and on to the development of the Western traditions of modal and polyphonic music. Understanding these potent harmonic relationships offers a way for today's musicians to transcend the limitations of overly rationalistic music by drawing on its metaphysical roots.

Going beyond the dominant orthodox narrative to incorporate insight from

revisionist scholarship on the Vietnam War, Michael G. Kort presents the case that the United States should have been able to win the war, and at a much lower cost than it suffered in defeat. Presenting a study that is both historiographic and a narrative history, Kort analyzes important factors such as the strong nationalist credentials and leadership qualities of South Vietnam's Ngo Dinh Diem; the flawed military strategy of 'graduated response' developed by Robert McNamara; and the real reasons South Vietnam collapsed in the face of a massive North Vietnamese invasion in 1975. Kort shows how the US commitment to defend South Vietnam was not a strategic error but a policy consistent with US security interests during the Cold War, and that there were potentially viable strategic approaches to the war that might have saved South Vietnam.

Can innovations in business change society? Can innovations in society change business? These two questions have become critically urgent in recent years, but are rarely considered together. 'Business Models for Sustainability Transitions' therefore asks, can contemplating both concepts together result in a flourishing, sustainable future? Technology alone cannot save us. We cannot consciously consume our way out of trouble. This book represents a start at bridging the dynamic world of business

model innovation with the constant and unprecedented transitions underway in the world around us. For researchers, practitioners, and policy makers, the coupling of the two questions has the potential to unlock answers to our grand global challenges with responses that are at the same time rapid and enduring. This work offers unique and considered glimpses into what it may take to harness wide-ranging innovations for the collective good.

 BASIC APPROACH: Comprehensive -- this text explores the "full range" of finite element methods used in engineering practice for actual applications in computer-aided design. It provides not only an introduction to finite element methods and the commonality in the various techniques, but explores state-of-the-art methods as well -- with a focus on what are deemed to become "classical techniques" -- procedures that will be "standard and authoritative" for finite element analysis for years to come.
 FEATURES: presents in sufficient depth and breadth elementary concepts AND advanced techniques in statics, dynamics,

solids, fluids, linear and nonlinear analysis. emphasizes both the physical and mathematical characteristics of procedures. presents some important mathematical conditions on finite element procedures. contains an abundance of worked-out examples and various complete program listings. includes many exercises/projects that often require the use of a computer program.

Recently, technology and aging have been key research areas in human cognition. The Research Topic "Digital Skills and Life-long Learning: Digital Learning as a New Insight of Enhanced Learning by the Innovative Approach Joining Technology and Cognition" investigated technology's impact on cognitive and intellectual processes, highlighting how intensively technology can change and/or enhance the cognitive functioning throughout one's lifespan. The aim of this Research Topic was to provide an outlook through multidisciplinary research and development while addressing the dynamic intersection of cognition, mind, and technology. Our scope was 1) to favor

the cognitive technology debate, 2) to overcome the dichotomies of technology and psychology, 3) to emphasize the advances in knowledge and well-being. This Research Topic comprises review studies and original articles, focused on digital skills that enhance human potential. Transversal approaches and cross-sectorial analysis were encouraged, leading to investigation areas related to cognitive and mental processing—in educational, rehabilitation, clinical settings—across aging. Articles of high relevance to the Research Topic were submitted on the subjects of a) research in human performance and human factors, b) new research and technologies addressing the needs of a growing populace, and c) cognitive aging and cognitive rehabilitation research.

Part one: The Master Makers and their Guitars is devoted to separate chapters on each famous maker, including Antonio de Torres, Hermann Hauser, Santos Hernández y Aguado, Ignacio Fleta, Robert Bouchet, Daniel Friederich and José Romanillos. The reader will find historical information about the life of and influences on each maker, as well as detailed sets of working drawings for their guitars. Also included are rare photographs of the guitars. Part two: Workshop, Tools and Materials provides essential information about the tools, working environment and material needed by the guitar-maker. Part three: Guitar Construction – The Spanish Method comprises a step-by-step method of guitar construction, illustrated by numerous photographs and drawings. The method of making a guitar is presented with great clarity. So that even the newcomer to this fascinating craft will be able to produce a superb instrument. This book will be essential for the guitar-maker and the

historian, providing as it does a unique record of the different methods of guitar design and strutting systems that have evolved since Antonio de Torres first defined the essential characteristics of the modern classical guitar in the 1850s.

An essential guide to a librarianship based not on books and artifacts but on knowledge and learning. Libraries have existed for millennia, but today the library field is searching for solid footing in an increasingly fragmented (and increasingly digital) information environment. What is librarianship when it is unmoored from cataloging, books, buildings, and committees? In *The Atlas of New Librarianship*, R. David Lankes offers a guide to this new landscape for practitioners. He describes a new librarianship based not on books and artifacts but on knowledge and learning; and he suggests a new mission for librarians: to improve society through facilitating knowledge creation in their communities. The vision for a new librarianship must go beyond finding library-related uses for information

technology and the Internet; it must provide a durable foundation for the field. Lankes recasts librarianship and library practice using the fundamental concept that knowledge is created through conversation. New librarians approach their work as facilitators of conversation; they seek to enrich, capture, store, and disseminate the conversations of their communities. To help librarians navigate this new terrain, Lankes offers a map, a visual representation of the field that can guide explorations of it; more than 140 Agreements, statements about librarianship that range from relevant theories to examples of practice; and Threads, arrangements of Agreements to explain key ideas, covering such topics as conceptual foundations and skills and values. Agreement Supplements at the end of the book offer expanded discussions. Although it touches on theory as well as practice, the Atlas is meant to be a tool: textbook, conversation guide, platform for social networking, and call to action. Copublished with the Association of College & Research Libraries. Windeye Coffee House Press Offers the first overarching history of the

humanities from Antiquity to the present.
