Midterm 1 ECE 431 Digital Signal
Processing Midterm Exam I | Practice

Problems 0. An LTI system has impulse response $h[n] = 5(1/2)^n u[n]$. Use the DTFT to find the output of this system when the input is $x[n] = (1/3)^n u[n]$. 1. We obtain a DT signal $x[n]$ by sampling a CT signal $x(t)$. Unfortunately, we do not sample often enough and aliasing occurs.

marks] (a) An analogue signal $x_a(t)$ is band-limited to a frequency range below B Hz. This signal is sampled at f_s Hz to obtain the discrete time signal $\{x(n)\}$. Explain how it is possible using supporting ... Digital Signal Processing Midterm Exam EEE-424 Digital Signal Processing: Mid-Term Exam 2009. Duration: 2 hours Instructions: No calculators, book or notes allowed. SHOW YOUR WORK! No credit for results without explanations or steps!! Q.1. Consider the continuous-time signal $x(t) = \sin(2\pi at) + \sin(2\pi bt)$, where $b > a$. Q.1a Plot the continuous-time Fourier-transform $X(j\omega)$ of $x(t)$. Q.1b What is the lower bound for the sampling frequency so that $x(t)$ can be theoretically reconstructed from its samples? EEE-424 Digital Signal Processing: Mid-Term Exam 2009 EE345S Real-Time Digital Signal Processing Laboratory - Midterm #1. Midterm #1 for the Spring 2006 semester will be on Thursday, March 9th, during lecture time (5:00 to 6:30 PM) in ENS 115. Midterm #1 will be an open book, open notes exam scheduled to last the entire period. Midterm #1 questions will come from lecture and lab.

EE345S Real-Time DSP Laboratory - Midterm #1 Solutions for ECE 413 midterm exam Spring, 2017 Question 1: We have the following three cases. (a) $F_0 = 2.8$ kHz. In this case, $F_0 < F_s/2 = 3$ kHz and hence $x_c(t)$ will be recovered exactly. (b) $F_0 = 7$ kHz. In this case, $F_0 > F_s/2$ and hence there will be aliasing. In particular, within the passband of the reconstruction filter, we will have too "fake" deltas at frequencies $(6+7) = 13$ kHz.

ECE 413 - Digital Signal Processing Midterm Exam, Spring 2017 University of Waterloo Department of Electrical and Computer Engineering ECE 413 - Digital Signal Processing Midterm Exam, Spring 2017 June 14, 8:30 - 9:50 PM Instructor: Dr.
