 A transformer is used to reduce voltage and increase current. Welding generally uses currents that are higher than can be reasonably supplied by AC mains circuits and the

required arc voltage is low once the arc is struck so the gain in available current is a very major factor. transformerless - Use of transformer in arc welding ... Arc welding requires time, effort and patience to master as the weld rod position is very delicate to the position of the workpiece. The following is a simple guide to learn the basic technique of arc welding. There are 4 basic steps to perform an arc welding. Strike the arc. In this video we have demonstrated the
