Following the highly successful "Digital Photography Manual, the complementary "Photography and Your Digital World concentrates on image-editing and image manipulation, to provide a complete resource aimed at all levels of expertise. Highly practical with a results-oriented approach, the book looks at image creation from both a photographic and artistic viewpoint. The creation of images is examined holistically -- all the components of the process, including the original image, the software tools and the user's skill and creativity are examined and seen to contribute to the end result. Techniques and effects are given in the context of producing exemplary results, and creative solutions are presented for typical imaging problems. Taking a generic approach to software packages wherever possible, the low emphasis on individual software packages will prevent this title from dating quickly, allowing it to retain credibility as new software is developed.

Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies. Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools. It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardize up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook. This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of

plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation. Robert J. Blackwell Assistant Secretary for Maritime Affairs
