For more than forty years, Tony March generously donated most of his fortune and countless hours to help those in need, but no one ever knew—until now. To the public, he was the founder of one of the most successful minority-owned businesses in the country, a champion for minority business owners, and a respected community leader entrusted to manage \$1 billion in state funds. Privately, however, Tony indulged his true passion: getting his hands dirty serving the homeless community. In shocking detail, *Paying It Backward* presents Tony's incredible journey from poverty, abuse, racism, and depression in a Daytona

Beach ghetto to the highest level of business success and a life filled with purpose. More importantly, Tony shows how anyone—no matter who they are or where they come from—can improve their lives, conquer any hardship, and develop a heart for serving others. When you reach the top of the mountain, Tony says, you can either sit at the peak or reach back down and help others climb. In *Paying It Backward*, Tony reflects on his struggles on the way up—and the joy he found by reaching back down.

If you are new to both JavaScript and programming, this hands-on book is for you. Rather than staring blankly at gobbledygook, you'll explore JavaScript by entering and running hundreds of code samples in Firebug, a free JavaScript debugger. Then in the last two chapters, you'll leave the safety of Firebug and hand-code an uber cool JavaScript application in your preferred text editor. Written in a friendly, engaging narrative style, this innovative JavaScript

tutorial covers the following essentials: Core JavaScript syntax, such as value types, operators, expressions, and statements provided by ECMAScript. Features for manipulating XHTML, CSS, and events provided by DOM. Object-oriented JavaScript, including prototypal and classical inheritance, deep copy, and mixins. Closure, lazy loading, advance conditional loading, chaining, currying, memoization, modules, callbacks, recursion, and other powerful function techniques. Encoding data with JSON or XML. Remote scripting with JSON-P or XMLHttpRequest Drag-and-drop, animated scrollers, skin swappers, and other cool behaviors. Optimizations to ensure your scripts run snappy. Formatting and naming conventions to prevent you from looking like a greenhorn. New ECMAScript 5, DOM 3, and HTML 5 features such as `Object.create()`, `Function.prototype.bind()`, `strict mode`, `querySelector()`, `querySelectorAll()`, and `getElementsByClassName()`. As you can see, due to its fresh approach, this book is by no means watered down. Therefore, over the course of your

journey, you will go from JavaScript beginner to wizard, acquiring the skills recruiters desire.
